Individual solutions are our standard

BARTEC VARNOST has been developing and manufacturing explosion-protected electric motors for over 55 years. Besides standard solutions in drive technology we also satisfy individual needs from design, development, testing, to certifying and manufacturing.

Our experience in hazardous areas and our flexibility permit us to answer the most special requirements for different applications of flame-proof motors. To choose the ideal motor for your particular application, you can benefit from our experts' knowledge. All over the world, our engineers can advise and assist you from the idea to the implementation of your flame-proof motor project.

Explosion protection

Marking	<ul style="list-style-type: none"> ⊕ II 2G Ex de II CT4 Gb or ⊕ II 2G Ex d II CT4 Gb ⊕ II 2D Ex tb IIIC T85°C Class I division 1, Group C and D, T4-T6 Class II, division 1 and 2, Groups E, F and G ⊕ I M2 Ex de I Mb or ⊕ I M2 Exd I Mb
Certification	ATEX, IECEx, CSA, EAC, KOSHA, PESO, DNV-GL...
Other approvals and certificates, see www.bartec.de	

Technical data

Frame size	63 mm to 355 mm
Power	0.05 kW to 400 kW
Voltage	up to 1100 V
Standard polarity	2, 4, 6 and 8
Double speed motors	
Frequency	50 Hz or 60 Hz
Insulation class	F or H
Mechanical protection	IP 54 to IP 68
Ambient temperature	-50 °C to +85 °C

Motor frame

Gray cast iron frame size 63 to 280 mm
Welded frames frame size 315 to 355 mm
Modular implementation of frames allows <ul style="list-style-type: none"> - screw-on flanges of various dimensions - screw-on feet - rotation of terminal box in intervals of 90°
Ball bearing solidly fixed on AS side

Terminal box

Choice between Ex d or Ex e terminal box
Terminal box positioning at 90°, 180° and 270°
Metric entry threads, Pg, NPT and ISO 7/1
12 terminals
Direct cable entry without terminal box

Additional options

Temperature sensors in windings or bearings PTC, PTO or Pt100
Anti-condensation heaters
Temperature class T5 and T6
Insulated bearings from frame size 160 and above
Additional bearing lubrication
SPM provision for frame size above 100
Usage with frequency regulator up to 100 Hz without additional certification
Additional forced cooling for frequency-regulated drives at low frequencies
Add- on Ex encoder
Special version for hard working conditions in chemistry
Motors for marine industry with certificates: GL, LRS, BV, ABS, DNV, RMRS etc.
IP 68 submersible flameproof motors 4KTS
Flameproof motors with brake BM 4KTC

COMEX CONTROL STATIONS

A large number of variants and versions of actuating elements are available for the ComEx control and indicator units. All actuating elements are made of high-quality thermoplastic and conform to the IP 66/IP 67 type of protection. To complete the actuating elements, there are useful accessories such as e. g. label holders, marking tags, metal shroud or nut wrench. Actuating elements for increased resistance to oil are available too. The actuating elements are mounted quickly and easily onto the ComEx control and indicating devices. Use in Zone 1 and 21 is certified.

- Easy installation
- Certified for Zone 1 and 21
- High IP degree of protection

- High flexibility
- Easy installation
- High IP protection type

The ComEx switching module can be used in almost all potentially explosive areas where machine functions need to be triggered by a button or a switch. ComEx switching modules are flexible in use and offer a range of actuator elements. All contacts of the switching module are self-cleaning, and NC contacts have positive opening. The conductor is connected using terminals with increased safety on the back of the module. The simple installation of the actuator elements, without the use of tools, guarantees the high IP protection type.

Switch module without actuating element 07-3321-1 00

Actuating element Standard 05-0003-00

Increased oil resistance 05-0003-00 BN

Please enter code number. Other actuators available see following.
 Technical data subject to change without notice.

- One module for all fields of application
- Illumination 180°
- High flexibility thanks to the junction box
- Easy installation
- High IP protection type

The ComEx lamp module signals command modes by means of a light signal. It is suitable for use in almost all potentially explosive areas in which the functional status of machinery needs to be visibly displayed. The lamp modules are executed according to the requirements of type of protection “e increased safety” and “d flameproof enclosure”. The lamp module can be combined with various lamp module actuators. A junction box is provided for the safe and convenient installation of the module in a control panel. Conductors are connected using terminals with increased safety on the back of the module. The simple installation of the lamp module actuators, without the use of tools, guarantees the high IP protection type.

- Easy and exact setting of the desired value
- Easy installation
- High IP rating

The ComEx potentiometer is used in virtually all hazardous (potentially explosive) locations where machine functions are controlled by means of adjustable voltage distributors. The module can be combined with a potentiometer actuator (scale graduation 0 to 10). Conductors are connected via of terminals on the back of the module which have an increased safety level. The easy installation of the potentiometer actuating element without the need for the use of tools ensures conformance to the high IP degree of protection.

Notes for installation and inspection:

At rated voltage:
 ≤ AC 50 V/≤ DC 120 V
 (protection low voltage in accordance with DIN VDE 0100 T. 410)
 potentiometer drive shaft can be operated without actuating element.

At rated voltage:
 ≥ AC 50 V to max. AC/DC 230 V
 potentiometer drive shaft can only be operated with actuating element or has to be deenergized.

- Contacts with positive break operation
- Latched and momentary-contact positions

This control switch has been designed to solve the variety of problems encountered in chemical and petrochemical plants and on explosion-proofed electrical machinery. Four switch contacts as opening and closing elements in different permutations permit a variety of functions. The opener has a positive break operation. The switch actuator offers latched and momentary-contact positions with different switch positions. The control switch can be installed quickly and directly into double or triple ComEx enclosures, or in combination with other command devices in control units.

- One module for all intrinsically safe application areas
- Excellent luminosity
- High flexibility due to junction box
- Low installation depth

The ComEx^{flex} Ex i illuminated button is used in almost all hazardous (potentially explosive) areas where machine functions are to be activated at the touch of a button and the corresponding functional status is to be visually displayed. The illuminated buttons are produced in conformance to the requirements for the “e increased safety”, “d flameproof enclosure”, and “i intrinsic safety types of protection”. They may be activated by intrinsically safe circuits. ComEx^{flex} is flexible and in addition to a large number of illuminated button actuators, it offers a junction box to facilitate a safe and convenient installation of the module into a control panel. The module’s contacts are designed as snap-action switching elements. Conductors are connected using terminals with increased safety on the back of the module. The illuminated button actuators can be fitted easily, without the use of tools, which ensures conformance to the high IP degree of protection.

- One module for all fields of application
- High flexibility thanks to the junction box
- Low installation depth

The ComEx^{flex} potentiometer is used in almost all hazardous (potentially explosive) areas where machine functions are controlled by means of adjustable voltage distributors. The module can be combined with a potentiometer actuator (scale graduation 0 to 10). A junction box is available as a safe and convenient means of installing the potentiometer in a control panel. The conductors are connected by means of terminals on the back of the module which have an increased safety level. The easy installation of the potentiometer actuating element without the need for tools, ensures conformance to the high IP degree of protection.

Notes for installation and inspection

At rated voltage:

≤ AC 50 V/≤ DC 120 V

(Safety extra low voltage in conformance to DIN VDE 0100 T. 410)

The potentiometer drive shaft can be operated without actuating element.

At rated voltage:

≥ AC 50 V to max. AC/DC 230 V

Potentiometer drive shaft must be operated with an actuating element or it must be deenergized.

BARTEC offers a junction box to facilitate the use of ComEx^{flex} in a control console or a control panel. The junction box features a cable gland and can be combined with various function modules. The junction box allows the connection of a conductor, which can be assembled either to order or by the customer.

- 3 standard enclosures
- Easy to install
- Extremely flexible
- Customer-tailored solutions

ComEx is a flexible system offering standard as well as customer-specific local control and indicating units. You have the choice between three standard enclosures which can accommodate up to three different control and indicating devices. Combinations of up to three ComEx enclosures are possible. Electrical connection can be established by using plastic or metal cable glands M20 x 1.5 and M25 x 1.5. The plastic glands require no lock nuts. Metal glands are screwed into a metal earth plate sheet inside of the enclosure. Maximum amount of cable glands: two M20. To ensure easier operation on site, each enclosure can be equipped with an individual info-label. For offshore applications special oil-resistant versions are available.

- For Zone 1/21 and 2/22
- Positive break operation
- Latched and momentary-contact positions
- Easy installation
- Customer-specific solutions

This control switch has been designed to solve the variety of problems encountered in chemical and petrochemical plants and on explosion-proofed electrical machinery in zones 1 and 2 and in Zone 21 and 22. Four switch contacts as opening and closing elements in different permutations permit a variety of functions. The opener has a positive break operation. The switch actuator offers latched and momentary-contact positions with different switch positions. The control switch is supplied in double or triple ComEx enclosures, or in combination with other command devices, in control units. The actuating element can be locked with up to max. 3 padlocks.

- Standard enclosures
- Corrosion resistance
- Customer-tailored solutions

This series features control, signalling and display units fitted into stainless steel standard enclosures. The enclosures are certified for use in Zone 1/21 and Zone 2/22. The equipment is highly corrosion resistant due to high quality stainless steel grades. Either plastic or metal glands are used for electrical connection. On request, BARTEC will equip the enclosures with corresponding control, signalling and display units and cable glands and supply the required labels.

CONTROL PANELS

- The right size/material enclosure
- Optimum functionality thanks to the great variety of components
- Customised planning and implementation
- Certified to many standards

BARTEC produces local control stations for use in areas with flammable gases and dusts. Depending on the application area, the control stations are designed with the type of protection “Increased safety” or “Protection by enclosure”. The explosion-protected local control stations are available in aluminium, polyester or stainless steel. When selecting the version, you can choose between a cabinet with door and an enclosure with screw cover. Control, signalling and display devices and remote I/O systems are installed according to customer specifications. The installation of industrial standard equipment in controls for Zone 21, type of protection tb “Protection by enclosure” is possible. The control elements can also be mounted on a mounting rail or in the front wall. Free installation areas can be designated for the subsequent installation of BARTEC control and signalling devices, which are then sealed using blanking plugs. All explosion-protected local control stations are supplied prewired on terminals

Fields of application

Chemical and petrochemical industry, process and plant engineering, pharmaceutical and food industry, OFF SHORE areas.

- The right size/material enclosure
- Optimum functionality thanks to the great variety of components
- Customised planning and implementation
- Certified to many standards

BARTEC produces local control stations for use in areas with flammable gases and dusts. Depending on the application area, the control stations are designed with the type of protection “Increased safety” or “Protection by enclosure”. The explosion-protected local control stations are available in aluminium, polyester or stainless steel. When selecting the version, you can choose between a cabinet with door and an enclosure with screw cover. Control, signalling and display devices and remote I/O systems are installed according to customer specifications. The installation of industrial standard equipment in controls for Zone 22, type of protection t “Protection by enclosure” is possible. The control elements can also be mounted on a mounting rail or in the front wall. Free installation areas can be designated for the subsequent installation of BARTEC control and signalling devices, which are then sealed using blanking plugs. All explosion-protected local control stations are supplied prewired on terminals.

Fields of application

Chemical and petrochemical industry, process and plant engineering, pharmaceutical and food industry, OFF SHORE areas.

Features

- Flexible product range with many standard sizes
- IP 66 ingress protection as standard
- Wide temperature ranges
- Flexible certification
- May be used with Ex e/Ex i connection box
- Optional window on lid, sides or back
- High operational reliability
- Non invasive maintenance schedule

Typical applications

- Motor starter
- Alarm panel
- Intrinsically safe circuits
- Transformer
- Charging unit
- Terminal boxes

Options

- Ex d enclosure with windows in lid
- lamps or switches in lid or base, for Ex d enclosure, as well as Ex e enclosure

The TNCD range of enclosures is designed to meet the harshest of environments and are ideal for any rugged application where a potentially explosive atmosphere may be present. Our range is comprised of many standard sizes, all manufactured in 316L/CF3M stainless steel providing long term corrosion resistance. The enclosures allow for the use of standard electrical components inside. Thus subsequent replacement and maintenance is easy and may be performed by skilled electricians. If required, several enclosures may be assembled on a framework with separate or common Ex e/i connection boxes. The enclosures are supplied empty with component certification or as assembled turn-key systems.

The TNBCD range of enclosures is designed to meet the harshest of environments and are ideal for any rugged application where a potentially explosive atmosphere may be present. Our range is comprised of many standard sizes, all manufactured in 316L stainless steel providing long term corrosion resistance. The enclosures allow for the use of standard electrical components inside. Thus subsequent replacement and maintenance is easy and may be performed by skilled electricians. If required, several enclosures may be assembled on a framework with separate or common Ex e/i connection boxes. The enclosures are supplied empty with component certification or as assembled turn-key systems.

Features

- Flexible product range with many standard sizes
- IP 66 ingress protection as standard
- Wide temperature ranges
- Flexible certification
- May be used with Ex e/i connection box
- Optional window on sides or lid
- High operational reliability
- Non invasive maintenance schedule
- Atex, IECEx and TR-CU approvals

Typical applications

- Motor starter
- Alarm panel
- Intrinsically safe circuit
- Transformer
- Charging unit
- Terminal boxes

- Max. rated voltage 11kV
- External 800 A busbar system
- Medium voltage and control system separated from each other in two independent Ex d compartments
- Setting all parameters from outside without opening the door

8SN7 is the BARTEC medium voltage switchgear up to 11 kV suitable for hazardous areas like offshore, chemical industries or power plants. Each 8SN7 panel consists of a single unit which can be equipped with a withdrawable circuit breaker or contactor, earthing switch, as well as with all the accessories for conventional units. 8SN7 switchgear is designed for free outdoor standing. On request special accessories like base frame or canopy are available.

The enclosure is in three versions available:

- Carbon steel painted/gap surfaces protected with MOLYKOTE®
- Body with carbon steel painted and gap surfaces with stainless steel (316L)
- Stainless steel complete painted or unpainted

- Bushings can be fitted on all sides
- Flange surfaces for mounting enclosures
- Low weight

As flameproof control unit, this Ex d enclosure from BARTEC provides a compact solution for the installation of standard industrial products, whereby components such as contactors and relays are installed in a flameproof enclosure. The enclosure is light, flexible with respect to wiring systems, may be flange mounted and can be equipped with electrical or mechanical line bushings on the sides and in the lid. The different versions of lids enable the installation of display units or devices with control buttons. The installation of Ex i assemblies is also permitted.

Types of connection

Flameproof control units may be connected either with direct cable entry by means of Ex d cable glands or indirectly using an Ex e junction box. The electrical connection between Ex d and Ex e area takes place using Ex d line bushings with terminals. Control devices and display units can be installed in the junction box

BARTEC offers two type series of explosion proof encapsulated enclosures for using electric components in hazardous (potentially explosive areas). Within the scope of the EC model test certification, these can be fitted with industrial standard units, such as e.g. small-type motors, printed circuit boards and cameras. The mounted parts are evaluated by BARTEC, fitted into a suitable housing and provided as a complete device with the corresponding ATEX marking. This housing series offers optimum solution approaches for control, regulating and display devices in Zone 1 and zone 21 hazardous areas.

- Small design
- Simple installation

These up to 4 W potentiometers show that Ex potentiometers can be small and compact. The external dimensions are approximately the same as those of standard industrial potentiometer enclosures. Central fixing in a single hole and the standard size of shaft have been included. From the variety of resistors on the market we have chosen cemented wire-wound resistors and carbon film resistors and developed a standard-program range. The metal Ex d enclosures are tailored to the dimensions of the resistors and feature a standard 30 mm diameter. The potentiometers have been designed so that the stated nominal capacities can be fully exploited at temperature class T6 or T5 and be deployed in zones 1 and 2. The potentiometer is fitted into an enclosure that meets the requirements of an approved type of protection in conformance to IEC/EN 60079-0.

- High IP-protection class
- Simple installation
- No further approvals required

This standard range of up to 8 W potentiometers with wire-wound resistors show that Ex potentiometers can be small and compact. The external dimensions are approximately the same as those of standard industrial potentiometer enclosures. Central fixing in a single hole and the standard size of shaft have been included. From the variety of resistors on the market we have chosen the most commonly used types and developed a standard program range. The metal Ex d enclosures are tailored to the dimensions of the resistors and feature a standard 30 mm diameter. The potentiometers have been designed so that the stated nominal capacities can be fully exploited at temperature class T6 or T5 and be deployed in zones 1 and 2. In addition to the standard models all other versions such as tandem potentiometers, potentiometers with microswitches, non-standard shafts or larger resistor diameters can be encapsulated in enclosures of up to 120 mm diameter.

The limit value transmitters of Types 07-31...-.../... are deployed in conjunction with pneumatic actuators on valves and fittings. They serve to signal the "open/closed" status of a fitting. This end position is communicated by means of up to a maximum of 6 limit switches in the "Ex d" type of protection or by means of 6 proximity initiators in conformance to NAMUR in the "Ex i" type of protection. In intrinsically safe proximity initiators there is a choice of slot initiators or V3 initiators. The limit monitors are available in polyester, aluminium and stainless steel. The metal versions can be used in temperatures down to -60 °C – depending on the fitted components. To ensure mechanical adaptability to the pneumatic actuators, we supply 4 consoles according to VDI/VDE 3845. The BARTEC limit monitors can be used in hazardous (potentially explosive) areas in Zone 1 and 2 in accordance with the certified explosion sub-groups IIA, IIB and IIC and the temperature classes T5/T6 and in Zone 21 and 22 in accordance with the certified max. surface temperature.

- Black box system
- Automatic calculation of the purge time
- WEB interface
- 3 x PT100/1000 inputs
- Modular design
- Safety-related control system
- Separate purge gas input and output

The APEX^{px} Ex p control unit controls and monitors the pre-purge and operating phase of pressurised enclosure equipment protected in accordance with ignition protection type px. Digital or proportional purge gas valves can be used as purge gas valves. The parameters can be set using the integrated WEB interface or the optionally available p operator panel. The APEX^{px} features two release relays; one which is energised and one which has floating contacts. Two signal relays with one changeover contact each are additionally available. Three PT100/1000 inputs are available to monitor the temperature of the Ex p-protected equipment. Up to three switch values can be assigned to them. Model I comes complete with separate pressure measurement.

The following components are additionally required to set up a complete control system:

- Sensor box^{px}
- Pressure monitor
- Purge gas valve, proportional or digital
- Valve fuse
- Pressure reducer
- There is the option to connect a p operator panel

The APEX^{cf} Ex p control unit controls and monitors the pre-purge and operating phase of pressurised enclosure equipment with integrated containment, protected in accordance with ignition protection type px, and additionally features an adjustable continuous flow during the operating phase. The parameters can be set using the integrated WEB interface or the optionally available p operator panel. The APEX^{cf} features two release relays; one which is energised and one which has floating contacts. Two signal relays with one changeover contact each are additionally available. Three PT100/1000 inputs are available to monitor the temperature of the Ex p-protected equipment. Up to three switch values can be assigned to them. The design of the APEX^{cf} means that all components required for the pressurised enclosure are located in the control unit. The equipment to be monitored is connected to the Ex p control unit by means of a pipe, which allows a maximum purge volume of 70 litres, maintains overpressure and performs constant purging with a defined volume of purge gas. The following components can also be connected:

- There is the option to connect a p operator panel

- LED status indicator
- Safety-related control system
- Integrated multiport valves for purge gas inlet

The APEX 2003.SI control unit controls and monitors the pre-purge and operating phase of Ex p-protected analysis systems with integrated containment.

Additional function:

During the pre-purge phase, the maximum purge gas flow rate is 4100 NL/h. During the operating phase, continuous purging at a rate of 5 litres/minute is set via a bypass. The control unit features two freely programmable relays and one non-floating release contact.

Terminals	Ex e: 0.08 to 2.5 mm ² , fine-wire, tension spring Ex i: 0.2 to 1.5 mm ² , fine-wire, push-in
Pneumatic connections	2 x pipe connections, Ø 10 mm
Pressure measurement range	0 to 300 mbar
Adjustable differential pressure	Adjustable, 0 to 300 mbar
Orifice plate size	8 mm
Max. flow rate	6000 l/h
Pre-purge time	0 to 120 min
Weight	6.8 kg
Safety integrity level	SIL 2

The APEX^{dp} Ex p control unit controls and monitors the pre-purge and operating phase of pressurised enclosure equipment with integrated containment, which is protected in accordance with ignition protection type px, and additionally maintains the internal pressure of the protected equipment by Δp regulation during the operating phase. Connecting additional pressure sensors allows the pressure inside the housing to be regulated to a higher value than that of the measurement gas using a proportional valve. The parameters can be set using the integrated WEB interface or the optionally available p operator panel. The APEX^{dp} features two release relays; one which is energised and one which has floating contacts. Two signal relays with one changeover contact each are additionally available. Three PT100/1000 inputs are available to monitor the temperature of the Ex p-protected equipment. Up to three switch values can be assigned to them. The design of the APEX^{dp} means that all components required for the pressurised enclosure are located in the control unit. The equipment to be monitored is connected to the Ex p control unit by means of a pipe, which allows a maximum purge volume of 70 litres. The following components can also be connected:

- There is the option to connect a p operator panel
- Pressure sensors

Electrical data

Supply voltage	24 V DC to 44 V DC, ± 10 % or 100 V AC to 230 V AC, ± 10 %
Power consumption	Pv = approx. 19 watts
Normally open contacts	K1 (SIL) release, max. 5 A (AC1) K2 (SIL) release, floating, max. 230 V AC/4.5 A (AC1) K3 and K4 signal relays, floating, changeover contact, max. 5 A (AC1)
Inputs	3 x PT100/1000 1 x bypass 1 x main switch 1 x 4 – 20 mA [ib] – pressure sensor 1 x 4 – 20 mA [ia] – pressure sensor

- LED status indicator
- Modular design
- Safety-related control system
- Integrated multiport valves for purge gas inlet and outlet
- Option to connect separate pressure sensors

The APEX 2003.SI control unit controls and monitors the pre-purge and operating phase of Ex p-protected analysis systems with integrated containment.

Additional function:

Connecting additional pressure sensors allows the pressure inside the housing to be regulated to a higher value than that of the measurement gas using a proportional valve. During the pre-purge phase, the maximum purge gas flow rate is 4100 NL/h at a pressure of 50 mbar inside the housing. The control unit features two freely programmable relays and one non-floating release contact.

- Mounting position independently

The motor purge control system consisting of an MPC Motor Purge Controller and an MPV Motor Purge Valve (outlet valve) is a unit which allows the safe operation of electric motors in hazardous environments. The explosion protection is ensured by means of a pressurised enclosure with leakage loss compensation. The Motor Purge Control System monitors, controls and regulates the supply of purge gas to the Ex p motor. Any faults that arise within the system or during the supply of purge gas will be reliably reported and deactivated by a safe disconnection of the Ex p motor.

Technical Data

Construction	valve-controlled outlet for MPC
Varnish	RAL 7035
Enclosure material	Sheet steel (stainless steel on request)
Protection class	IP 65
Pressure relief	integrated, opens at 50 mbar
Connections	2 x pipe connection 10 mm
Mounting	horizontal or vertical
Flying spark and particle barrier	integrated
Flow rate	0 to 180 m ³ /h at MPV 2 with MPC 2 0 to 450 m ³ /h at MPV 3 with MPC 3
Connection flange	DIN2633 NW 50 PN16 (MPV 2) DIN2633 NW 100 PN16 (MPV 3) (Dimensions and details see Operating Instructions)
Ambient temperature	-30 °C to +60 °C

Version I – Mobile unit

Connection	Plug connector, 2m cable One matching part for control unit included in the delivery
Weight	Approx. 2.5 kg (depending on the version)

Version II – Front panel mounting

Connection	4 x 0.5 mm ² , 2 m cable Fixed connection on the control unit
Weight	Approx. 2.5 kg (depending on the version)

Version III – Front panel installation

Connection	4 x 0.5 mm ² , 2 m cable Fixed connection on the control unit
Weight	Approx. 2.5 kg (depending on the version)

The p Operator panel is designed for optional use with the new generation of Ex p control systems. It displays and visualises system-specific pressures, and displays parameters, plain text messages and system statuses. The p operator panel can be directly connected to the Ex p control unit, which supplies it with the required intrinsically safe voltage. Three versions of the p operator panel are available:

Version I – Mobile unit

The mobile unit is equipped with an Ex-protected plug connector. When using multiple Ex p control units, in order to carry out maintenance, the mobile unit can be connected to the Ex p control unit and removed again once the work is complete. The flanged socket required is securely installed on the control unit and is enclosed when the shipment is first ordered.

Version II – Front panel mounting

The front panel mounting version is secured to doors or adjacent walls, for example, using the mounting brackets fitted to the protective housing. The connection between the p operator panel and Ex p control system can be 2 m long.

Version III – Front panel installation

The front panel installation version has no protective housing and can be installed directly in the door of the p-protected equipment, for example.

Technical specifications

Directives	Directive 2014/30/EU Directive 2014/34/EU
Housing material	V4A stainless steel (variant)
IP rating	IP 66

Electrical data

Supply voltage	3.3 V DC (internal)
Power consumption	P _v = approx. 2 watts

The sensor module is designed to be used in APEX control systems. It measures the system-specific pressures and displays parameters and pressure values. The sensor module is directly connected to the APEX control unit, which supplies it with the required intrinsically safe voltage. Measured signals are forwarded to the APEX control module in an intrinsically safe manner. The sensor module is connected by single conductors or a hose line, depending on the version.

APC APEX pressurised cabinet for Zone 1
SPC SILAS pressurised cabinet for Zone 2 or 22

The need for complex automation functions for processes in the chemical, pharmaceutical, oil and gas sectors is constantly increasing.

Flexible, reliable and low-maintenance solutions are required for measurement, control, regulation and visualisation, especially in potentially explosive atmospheres.

Complete control systems and switchgears, drives, pumps, large displays and industrial monitors, including keyboard and printer, must be prepared for use in Ex areas.

The Ex p pressurised enclosure is one of the most flexible Ex solutions for many applications.

This type of ignition protection makes it possible to operate non-ex-capable devices in potentially explosive atmospheres in Zones 1/21, 2/22. The idea behind this is to prevent a potentially explosive atmosphere from entering a sealed protective housing by generating constant overpressure compared to the surrounding atmosphere.

BARTEC offers a completely new Ex solution for controlling and automating devices, machines and systems in Zones 1/21, 2/22 in the form of the pressurised enclosure Ex p systems.

Depending on the application, non-Ex-protected control units and switching devices, as well as complete automation systems, are installed in the housing. Modern, ready-for-operation Ex solutions – including the required ATEX or IECEx certification – are created on the basis of BARTEC's modular, ATEX-certified pressurised enclosure. The overpressure as a result of the purge gas is produced by compensating for the leakage losses. The pressurised enclosure solution is designed for a large range of ambient temperatures in temperature classes T3 to T5.

The main focus is on maintenance and availability of Ex devices and systems. The experts at BARTEC have many years of experience in explosion protection applications and in designing complete systematic solutions for automation.

This expertise is the basis for developing reliable and efficient solutions, from engineering, manufacturing and procurement, through to commissioning and approval.

The Ex p solutions are designed from sheet steel or stainless steel, with air conditioning, with different coatings, seawater-resistant or drip-resistant, depending on the application.

Custom solutions

BARTEC offers custom pressurised enclosure solutions for

- Devices
- Printers
- Operating terminals
- Control systems
- Frequency converters
- Monitors

Air conditioning

BARTEC can also provide you with various solutions for the air conditioning of Ex p systems on request

- Heating during operation
- Heating when stationary
- Air cooler
- Air conditioning

Accessories

- Purge gas filter systems
- Release contactor
- Isolating relay for data lines
- Bypass key switch

Polyester enclosures have proven their worth in many industrial plants. They offer safe protection even when they are used under extremely unfavorable conditions, on exposure to aggressive chemical media or hard mechanical conditions. The inside base of the enclosure has at its sides, threaded bushings for the fastening of mounting rails or panels. The enclosure is mounted by means of insulated screws outside of the lid seal.

The explosion-proof terminal boxes of glass-fiber reinforced plastic come with pillar terminals. Lid and base are secured with captive screws. The box has pillar terminals and threads (see selection chart). All holes for cable entries not used, have to be sealed by means of Ex-certified stopping plugs. The terminal box is also suitable for the connection of intrinsically safe circuits. Such cases require special markings. The box is mounted via fixing holes located outside of the terminal compartment.

Fields of application: Connection of lamps, devices and sensors, Zone 1/Zone 2

Explosion protection (EN 60079-0)

Marking ATEX	Ⓔ II 2G Ex e II T6
Certification	PTB 08 ATEX 1061

Polyester distribution boxes have been of great advantage in many industrial plants. They offer safe protection even when they are exposed to extreme environmental conditions, aggressive chemical media or high mechanical stress. The narrow sides within the enclosure hold threaded bushings for the fixing of terminal rails or mounting panels. The enclosure is mounted by means of insulated screws outside of the lid sealing gasket. These black high-quality explosion-proofed enclosures are used in hazardous areas by inflammable dust (Zone 21 and 22). The fundamental prerequisites of the "protection through enclosure" protection class are fulfilled with the heating up calculation as per the accompanying sheet and a separate IP protection test. EC model test certification was issued in 2000 by the nominated body IBExU.

Option

External feet of high-quality stainless steel

Components

Rail-mounted terminals, terminal markers, cable glands, mounting panels, rails, type labels, labels

Installation instructions

The installer must make sure that the enclosure used is suitable for the corresponding field of application. This means that the marking must correspond to the classification of the Ex area. Also must the temperature class of the distribution box meet the respective requirements.

Technical data

Material	glass-fibre reinforced polyester enclosure with hinged door, EN 60079 surface resistance < 10 ⁹ Ω, steel sheet mounting panel, RAL 2000
Paint	glassfibre reinforced polyester, EN 60079-0, halogen-free
Colour	RAL 9005, black
Dorlock	Locking system with casement fastener double way cam lock (other models on request)
Standard seals	foamed PU seal -20 °C to +80 °C
Mechanical resistance	impact energy 7 Nm (EN/IEC 60079)
Protection class	EN/IEC 60529, IP 66 EN 60079-0 (07-5187-8000/0130 in IP 56)

Accessories

Supplied with steel sheet mounting panel. Wall mounting brackets on request.

Components

Rail-mounted terminals, terminal markers, cable glands, mounting panels, rails, labels

Installation instructions

The installer must make sure that the enclosure used is suitable for the corresponding field of application. This means that the marking must correspond to the classification of the Ex area. Also must the temperature class of the distribution box meet the respective requirements.

Aluminium enclosure for NPT thread on request (insulation thickness). All dimensions are approximate measurements and subject to terminal changes.

Technical data subject to change without notice.

- For harsh and hazardous areas
- Flexible
- Engineered to order

Aluminium distribution boxes have proven to be an excellent solution for encapsulating and shielding components and modules in electronic and pneumatic engineering. Bottom and lid of the distribution boxes come with earthing screws for the connecting of the protective conductor. Mounting threads in the bottom section, fixing holes outside of the sealed space. The same high quality explosion-proofed enclosures are used in hazardous areas by inflammable dust (Zone 21 and 22). By means of the heating calculation according to the supplement to the test certificate and a separate IP-protection test, the basic requirements of the "protection through enclosure" type of protection are met.

QS = diagonal strip/horizontal alignment, e.g.: LS 4 = 4 clamping points for 8 connections
 LS = horizontal strip/vertical strip, e.g.: QS 3 = 3 clamping points for 6.

Each enclosure side wall has only a limited number of gland entries to ensure the mechanical stability of the enclosure.

Technical data subject to change without notice.

- Zones 1/21 und 2/22
- Extremely robust
- Fully bolted or hinged

BARTEC stainless steel housings and distribution boxes are designed and approved for Zone 1 and 2 as well as Zone 21 and 22. They are particularly suitable for applications under extreme environmental conditions, and they provide reliable protection under heavy loads. The housings are made from 1.4301 (V2 A) or 1.4404 stainless steel (V4 A). The series includes empty housings and distribution boxes with door or cover. From a housing height of 120 mm, the housings can be supplied with or without flange plates. In addition to 25 standard sizes, approved customer-specific design variants are also available.

Technical data

Material	1.4404, AISI 316 L high quality stainless steel optional 1.4301, AISI 304 high quality stainless steel
Surface	brushed, painted or electro polished on request
Standard seals	EPDM
Mechanical strength	Impact energy 7 Nm
Version	with or without gland plates
Standard sizes	see selection chart
Protection class	max. IP 66 EN/IEC 60529

Scope of delivery

The scope of delivery includes wall attachment straps, internal and external PE connection, as well as a mounting plate for the empty housings/distribution cabinets.

Each enclosure side wall has only a limited number of gland entries to ensure the mechanical stability of the enclosure. Technical data subject to change without notice.

Features

- Flexible product range with many standard sizes
- Custom size or design on request
- Wide drain flange design to avoid accumulation of water or debris
- Hinged with screws from size 20 x 20 cm
- Standard IP 66 ingress protection, IP 67 and IP 68 on request
- Multiple grounding points
- Approved for intrinsically safe circuits
- Control equipment
- Self-limiting heating cable for anti-condensation protection
- May be combined as connection box for flameproof applications
- Temperature range -50 °C to + 200 °C
- ATEX, IECEx, INMETRO, CSA and TR-CU approved

Applications

The TNCN range of stainless steel 316L enclosures are designed for use in any environment where an explosive atmosphere may be present, and are especially recommended for chemical agent environments, seawater corrosion and extremes of low and high temperature.

The TNCN range comprises many standard sizes of enclosures manufactured in stainless steel 316L for maximum environmental protection. The main box is manufactured from 1.5 mm sheet. Cable entries can be made on all sides or onto optional gland plates. Multiple boxes of same or different size may be flanged together as a compact unit. If your need is for a particular size or requirement, BARTEC TECHNOR also offers tailor made sizes and solutions.

Technical data

Material	Stainless steel 316L
Protection class	IP 66 (IP 67 and IP 68 on request)
Temperature	-50 °C to +40 °C (T5) -50 °C to +60 °C (T6/T4)
Cover gasket	Silicone (operating temperature -50 °C to +200 °C)
Surface treatment	Acid pickle
Material thickness	min. 1.5 mm
Earthing	Internal earth bar/bracket, external earth bolt
Options	Quick locks, gland plates, multi transit conduit, window, electro polished or painted surface

Calculating Terminal Box Heat Dissipation and Number of Terminals

An ignition temperature is the temperature at which a hot surface will cause an ignition to occur in a given atmosphere. Dependent on the type of gas or dust, the maximum temperature that any surface in the terminal box can reach without a spontaneous ignition is known as the 'T Class'. The maximum surface temperature must always be lower than the ignition temperature of the atmosphere in which it is used. The terminal boxes within the TNCN range has been assigned a maximum heat dissipation relating to the ambient temperature and T-Class. The TNCN range offers T6, T5 and T4 protection:

T4 = Maximum 135 °C
 (Internal wiring must have a temperature rating of at least 110 °C)

T6 = Maximum 85 °C

Theoretical values are calculated based upon typical configurations. Maximum power must not be exceeded in any given terminal box. Maximum current per terminal must be calculated using the Maximum Heat Dissipation. For some applications it may be necessary to have a variety of terminal sizes. The following tables and examples demonstrate how this is achieved. The power heat dissipation determines the maximum number of terminals permissible for any size of terminal box, based on a 100 % load. In example 2, the total load has exceeded the maximum 100 % value. Therefore, the required size and number of terminals cannot be fitted within this terminal box. If the load exceeds the maximum value simply select a larger size terminal box within the range and repeat the process until the total load value is within 100 % value.

Maximum heat dissipation

Type No.	Max. dissipated power at T _a = 40 °C
121009	6 W
151510	15 W
202012	20 W
202017	20 W
302017	30 W
282817	30 W
383817	40 W
575717	90 W

Example 1 TNCN 282817A

Terminal/conductor size (mm ²)	Current (Amps)	Number of terminals	Load = 100 % maximum
1.5	10	18 (of max. 33)	54.54 %
2.5	16	8 (of max. 33)	24.24 %
4	20	6 (of max. 33)	18.18 %
Total load			96.96 %

Example 2 TNCN 282822A

Terminal/conductor size (mm ²)	Current (Amps)	Number of terminals	Load = 100 % maximum
1.5	10	18 (of max. 33)	54.54 %
2.5	16	10 (of max. 33)	30.30 %
4	20	6 (of max. 33)	18.18 %
Total load			103.02 %

Technical data subject to change without notice.

Typical Terminal Load Configuration

Note: In the shaded area you can add as many terminals as physically possible, provided the maximum load of 100 % is not exceeded. For loads on terminals below 4 A, the quantity will be limited by the available space inside the box. There is no restriction in the numbers of terminals. The temperature class will then be T6 (85 °C). Care must be taken to ensure that the size of the chosen enclosure can accommodate the cable bending radius.

The table is a guidance for the maximum quantity of glands for installation in one face (the Width column in the table) on TNCN terminal boxes.

Note! Recommended quantity is 2/3 of guided quantity. MCT-frames can be fitted in boxes with a minimum depth of 20 cm.

Dimensions

- 1 Internal earth
- 2 TS35 Rail (SS316)
- 3 Position for 2 terminal rails***
- 4 Earth bar 3 x 10 mm
- 5 External earth
- W = Width
- H = Height
- D = Depth

NOTES:

x: Box width - 80 mm
 *: The actual box depth is 5 to 10 mm larger than the box depth in type key indicate, dependent on the actual boy size.
 ***: Positioning of the internal bracket must be vertical when the width of the box exceeds the height. The bracket on the connection boxes shall always be placed vertically.

Please visit www.bartec.de for additional general arrangement drawings.

- Up to 10 kV
- GRP or SS
- Wide range of sizes

BARTEC offers explosion protected connection enclosures up to 6 kV and 10 kV with more than ten different enclosure types 07-5H9.-.../... of stainless steel and polyester. They serve for the connection of incoming and outgoing cables adjacent to electrical equipment such as motors and transformers up to 10 kV within the Ex area.

Consignment With wall fixing brackets

Accessories: mounting panel, post insulator terminals, PE connection; BARTEC tailors the enclosures to the customer's request and equips them with the desired cable glands.

Accessories

Designation	Description
Socket-head cap screws	
Hinges	Material: aluminium/plastic; opening angle: approx. 170°
Sealable steel lid screws	
Mounting panels for enclosures	galvanised steel plate laminate DIN 7735 HP 2061 for 80 x 75 to 190 x 75 mm polyester enclosures
Mounting rail TS 35	Material: bare copper, 15 high
Mounting rail TS 32	Material: galvanised steel plate, bare copper
Mounting rail TS 35	Material: galvanised steel plate, 7.5 high
Mounting rail TS 15	Material: galvanised steel plate
Mounting rail TS 10	Material: nickel-plated brass, 10 x 3 (5) mm
Lid seal	Material: silicone; temperature resistance: -55 °C to +100 °C
External fastening strips	Material: stainless steel
Earth bars LS, QS	
Wall bracket/steel structure	We supply special fixing brackets for enclosure mounting on pipes, walls and steel structures. They are made of high-quality stainless steel and can be ordered as complete mounting kit with fixing screws and, on request, bolts for the fixing onto steel structures. Ask BARTEC for more detailed information.
PB Pipe bracket	
On request, BARTEC supplies all enclosures complete with terminals, cable entries, blanking plugs and other fittings and components.	

Features

- High voltage/junction box up to 11 kV (15 kV zone 2)
- Top drive
- Motor/pump
- Subsea umbilical/downhole termination
- Topside Umbilical Termination Unit (TUTU) signal/power/hydraulics
- Umbilical fiber signal/power splitter

The BARTEC TECHNOR TNHV range of enclosures are designed to meet the harshest environments and are ideal for any rugged medium voltage application where safety and flexibility is key. With its flexible design and certification, we are able to support up to 11/15 kV in zone 1/2 and 2100 A.

15000 V					98	97

Note 1 - Please contact us if your load requirement is above 1000 A.

Note 2 - Voltages shown are derived from IEC 60664-1 and are based on the rationalization of supply voltages given in table 3b if IEC 60664-1. When determining the required values for creepage and clearance, the voltage value in the table may be increased by a factor of 1,1 in order to recognize the range of rated voltages in common use.

Technical data subject to change without notice.

BARTEC deploys rail-mounted terminals with EC model test certification in a variety of electrical operating equipment. BARTEC draws not only on its own innovations in this field, but also uses the know-how of other terminal manufacturers, such as WAGO, Phoenix and Weidmüller. BARTEC keeps a stock of terminals and their associated accessories made by these manufacturers and these are installed in explosion-proofed distributor boxes and at on-site control points as required by the customer.

- Customized assembly
- Marking perspecification
- Phoenix and Weidmüller as standard

Explosion protection

Terminals with EC model test certification are available in the following executions:

Feed-through terminals, Tension spring terminals, Mini-terminals, Block terminals, Protective conductor terminals	⊕ II 2G Ex e
Feed-through terminals, Tension spring terminals, Mini-terminals	⊕ II 2G Ex i

Technical data subject to change without notice.

Mounting

The terminals are mounted on rails and each terminal row is provided with a terminal plate at the end to cover open clamp sides. The rows are secured with brackets at both ends to prevent movement. Terminal strips must be installed in accordance with the operating instructions issued by the respective manufacturers. These instructions document the admissible state for the terminal installation required at maximum operating voltages including the necessary accessories. This applies in particular to a mixed arrangement with voltage conducting terminals, protective conductors and potential equalisation terminals, rail-mounted terminals of differing potentials, and between “inherently safe power circuits“ and those that are “not inherently safe“. If jumper bars are used, ensure compliance with the clearance and creepage distances required for the operating voltage.

- Proof in Application
- Easy to assemble
- Easy to use

Electrical equipment with operating voltages of more than 65 Volt need protective conductors. Metal enclosures also need an external protective conductor connection. BARTEC supplies these connections in three different sizes. The connections correspond to VDE 0170 and carry marking \perp or \oplus .

Nominal cross section 1.5 mm ² Max. tightening torque 1.2 Nm	Nominal cross section 4.0 mm ² Max. tightening torque 2.0 Nm	Nominal cross section 10 mm ² Max. tightening torque 3.5 Nm
*Hole diameter in case of aluminium		

Installation instructions (A):
Push in square cap (**do not hammer in**); put on terminal clamp and fasten screw with spring washer. Screw type terminals with U-brackets have to be wired according to EN 60999-1; 2000.

- Modular design
- Use without rail
- Marking individual

Ex e I/II mini-terminal

The mini terminal allows conductors to be connected in hazardous areas. In order to protect from mechanical damage, touch, dust and moisture, Ex terminals must be installed in increased safety type "e" enclosures. BARTEC mini-terminals are available as 2 and 3-pole terminals which can be mounted in a row. The clearances and creepage distances allow the terminals to be mounted directly on metal. Each individual terminal pole is marked with a number or symbol by a clip-on label. 2 and 3-pole bridges are available for cross connection terminals.

Ex I/II mini-terminals for intrinsically safe circuits

The design of the blue mini-terminal is the same as that of the Ex e I/II mini-terminal and is tested in the same way, too.

- Increased voltage
- Large cross section
- With or without mounting rail

The continuous demand for increased nominal insulation voltage and current carrying capacity in Ex e terminals made us develop these larger BARTEC terminal blocks. Terminals for 4 mm² and 16 mm² conductors are available in 2- and 3-pole versions. Terminals for 35 mm² conductors are available in a 3-pole version. The terminals can be fitted directly onto a metal base or onto a 10 x 5 mm mounting rail.

ExDrive USB solutions represent an ultra-rugged mobile memory solution for hazardous areas. Measuring 215 x 61/36 mm and weighing in at 500 g, the BARTEC TECHNOR ExDrive will never be misplaced, lost or accidentally forgotten. Encased in machined 6082 aluminium bolt, the ExDrive offers a near indestructible and hot pluggable mobile solution for routine data exchange or systems restoration.

ExDrive USB Mobile-Disk for use in hazardous areas

Easy access of all stored data by hot “plug and play” action within hazardous areas. The ExDrive is detected by the computer and is “seen” as any other mobile disk. The hazardous area docking station may be wall or equipment mounted and connected with the pre-connected 2 m cable fitted with an M20 Ex de gland and USB interface plug. The safe area docking station with USB connection allows easy access to data in safe area.

Technical data subject to change without notice.

- Zones 1/21 and 2/22
- Extremely robust
- 16 A - 63 A

The plug connections in the 07-831* series are suitable for use in potentially explosive areas of Zones 1/21 and of Zones 2/22. The quality materials used for the enclosure, including the external metal parts, guarantee the appropriate corrosion protection and chemical resistance for the application in “normal industrial atmospheres”:

- Impact resistant polyamide
- Fibreglass reinforced polyester
- Stainless steel AISI 316 L

The plug connections are used to supply power to portable local controllers, electrical installations and mobile machines and drives in potentially explosive areas, but can also be used in a “normal industrial area”. The low voltage sockets can be used up to a max. 16 A and for the voltage range set out in EN 60309 (see technical data). The operating equipment connected to the connector must be suitable for the mains voltage supplied.

SWITCHES

Insert switch with connection cores

This switching element can be universally used for switching, controlling and regulating operations within Ex-areas. The insert switch is audited to the latest EC guideline 94/9/EC. Devices equipped with these insert switches have to be approved by a testing authority, the switch itself needs not be retested. The cable cores are cast-in at the back of the switch. Their standard length is 500 mm; other lengths are available on request. To connect the cores we recommend the miniterminals from BARTEC.

Ambient temperature limit switches	T6 to max. +75 °C depending on the rated current
Protection class	IP 66 (IEC/EN 60529)

Limit switch with connection cable

The limit switches have been developed for Ex-areas where safe and reliable signalling is required, for example on pumps, petrol pumps, as well as in mechanical and high-tech engineering. The switches must be mounted into the respective devices or systems in such a way as to guarantee mechanical protection. No further tests are required. The connection cable is cast-in on the back of the switch. For the connection in Ex-areas BARTEC provides a large variety of terminals and terminal boxes.

- World's smallest Ex d miniature switch

BARTEC miniature switches are used in areas with of limited space for a flame-proof switching element. They are especially suitable for applications in valves, thermostats, push switches, servo components, level metres and switching gears. The world's smallest Ex d miniature switch is encapsulated in a plastic enclosure. The leads or cable tail are potted in at the base. The standard version of the BARTEC miniature switches contains fine silver contacts. Other use with low currents and voltages gold plated silver contacts are available optionally.

Limit switch with connection cable

Switches with connector cables have been approved by PTB with EC model test certification. The switches can therefore be mounted at any time into devices and systems which offer mechanical protection – no further testing is required. The connector cable is cast into the back of the switch. The wires are colour-coded. The (standard) cable length is 3 m; other lengths are available on request.

Insert switch with connection cores

The insert switch with wires is available as a building block for your explosion-proofing solution. These insert switches are tested and approved by PTB (the Federal Physical-Technical Institute) according to Ex Guideline 94/9/EC. After installation, the complete device is tested by an authorized institution. Thanks to its PTB approval, the microswitch itself needs not be individually tested. The leads are individually marked. The length of the cable is 50 cm (standard). Other lengths can be supplied on request. For the connection of the cores we recommend our BARTEC Ex Mini-terminals.

- Positive break contacts
- Very robust construction
- IP 65 protection class
- 13 different actuator versions
- Operator protection in accordance with GS-ET 15

Besides the metal-enclosed precision switch of the RET series, BARTEC also offers a series of limit switches with plastic bodies. The enclosure is made of shock proof plastic providing an IP 65 protection class according to IEC/EN 60529. Due to its format several limit switches can be mounted in tandem formation requiring very little space. This allows a multiple triggering of switching operations. The connection cable is equipped with a strain relief device, prewired and safely cast into the enclosure by means of epoxy resin. We supply this robust limit switch with a standard length of 3 m; special lengths are available on request. The integrated switching element changes over via NC contact with positive break operation. Operator protection corresponds to the GS-ET 15 requirements. Its high vibration resistance and long life are the result of a most extensive laboratory research. The certification for hazardous areas and the high protection class is granted thanks to its structural characteristics are the ideal prerequisites for its use in almost all fields of automation, mechanical and apparatus engineering.

Limit switches of the RET range are metal-encapsulated precision switches with a robust and compact explosion-proof structure. Our connection cable comes prewired, is equipped with a strain-relief device and safely cast into the enclosure. We supply this robust limit switch with a standard cable length of three meter. Special cable lengths and switches with lateral cable outlets are available on request. The integrated basic switch has a single-pole changeover contact with high switching accuracy and a precise repeatability of the switching point. Its high vibration resistance and long mechanical life are the result of extensive laboratory tests. The high protection class, IP 67, allows the switch to be used in nearly all fields of automation, mechanical and apparatus engineering.

- Dimensions and mounting dimensions according to DIN EN 50041
- Compatible with non-Ex DIN limit switches
- Different switching elements

All dimensions and actuating elements of the Ex d position switch correspond to the DIN EN 50041 standard. Its 30 x 60 mm mounting dimensions make the switch directly compatible to the position switch corresponding to the same DIN standard. The switch is equipped with snap-action contacts with several switching element versions. A microswitch with connection cable Type 07-2511 is mounted as switching element. Different actuators are available for the variety of actuating possibilities. After the removal of four screws these knobs can be rotated by 90 °C allowing four different directions of actuation. Gold-plated contacts are available for the switching of low currents of voltages. Standard length of the connection cables are 3 m. BARTEC has designed a very extensive range of Ex e terminal boxes of polyester and aluminium for the connection of the position switch within the Ex area.

CABLE ENTRIES AND LINE BUSHINGS

- Applicable under extreme and harsh conditions
- Made out of Marine brass & Stainless steel
- Wide temperature range -60 °C to +180 °C

The cable gland, made of different metallic materials, is used for inserting permanent cables and leads into electrical equipment with the increased safety "e" and flameproof "d" type of explosion protection. The cable glands conform to the protection class IP 66/68. They are suitable for use in Zone 1, 2 for Gas Groups IIA, IIB and IIC as well as for use in zones 21 and 22 for Dust Groups IIIA, IIIB and IIIC. When this cable gland is used, the instructions given in the type examination certificate/operating instructions must be observed.

multi-core with threaded sleeve

multi-core with cylindrical sleeve

4-pole or 6-pole with terminals

- Space-saving construction as many single cores are gathered in one single sleeve thus requiring only one cable entry hole.
- Motor mains and thermoprotection cables can be exited in **one** common sleeve.
- Numbered cores simplify connections and eliminate the usual “Ring out” in larger control systems.
- Coaxial and Ethernet bushings are similarly available.
- On the Ex d side, the cores are connected directly to the electrical load, intermediate terminals are no longer necessary.
- Small dimensions allow a rated insulation voltage of up to 3 kV.
- Blue cores for Ex i low power circuits.
- Permanent heat-resistance of the cores up to +110 °C.

A line bushing is a component for the electrical connection between a flameproof “d” enclosure and an increased safety “e” terminal box. The bushing consists of a threaded or non-threaded metal sleeve encapsulating one or more cores providing a flameproof barrier. The lengths of these leads vary according to their applications. The depth of engagement of the threaded sleeves and the joint length of the cylindrical sleeve in the wall of the “d” enclosure must correspond to the EN 60079-0 and EN 60079-1 standards. After installation the bushing must be protected against rotation and accidental loosening. Recommendations are given under “Accessories”. Our standard bushings come with threaded sleeves from M10 to M42 or with cylindrical sleeves. They are equipped with cores with a 0.2 to 120 mm² csa. and approved for nominal voltages between 250 V and 3 000 V. See also table “Electrical data”. For the connection of intrinsically safe circuits in the “d” area with the terminal strip in the connection compartment we provide **line bushings with blue cores for “i” low power circuits**.

Another product of our line-bushing range is the **bushing with terminals**. Combining Ex d line bushing with an Ex e terminal we designed an element which is hardly any bigger than a normal line bushing. This bushing plus terminals reduces the size of the terminal box and, at the same time, the installation costs. The bushings plus terminals are rated for 690 V and 1 000 V and certified. We supply them with 2 to 6 poles and threaded sleeves from M 24 to M 42.

All line bushings have been tested and certified for their use in hazardous areas according to the European standards EN 60079-0, EN 60079-1 and EN 60079-7 concerning electrical operating equipment for explosion-endangered areas for above-ground (II) and underground (I) according to ATEX. BARTEC has furthermore obtained several foreign admissions for these line bushings. When the 2014/34/EU guideline comes into force on 20. April 2016, explosion protected operating equipment must be properly installed in accordance with EN 60079-14. Among other things, section 10.4.2 requires that **cast, pressure-proof cable insertions according to EN 60079-1 are used for operating equipment with an internal ignition source for the explosion subgroup IIC and operating equipment with an enclosure volume greater than 2 dm³ in zone 1**. BARTEC offers a wide range of products with EU type test certification.

¹⁾ When determining the maximum current-carrying capacity of the connection cores, the self-heating and enclosure heating at the site of installation at the maximum permissible ambient temperature must be assumed. The maximum tightening torque for the terminal screw is 0.8 Nm.

Other equipment options and special sleeves on request.

It is essential to submit a customer requirements form which has been filled in correctly and completely. The form can be found in the catalogue at the end of the chapter.

Technical data subject to change without notice.

- 16 A to 630 A
- 690 V, 1000 V and 1600 V
- Max. working temperature 130 °C
- Different types of terminals
- Standard thread
M16 x 1.5 to M42 x 1.5

A bushing conductor stud is a component with which the electrical connection between an enclosure in type of protection Flameproof enclosure „d“ and its connection enclosure in type of protection Increased Safety „e“ is established. The cable bushing includes a threaded metal sleeve, a ceramic insulation, terminals and a stud. Standard threaded sleeves from M16 to M42 are included in the delivery of bushing conductor studs. The diameter of the stud depends on current and the terminal size on the cable diameter. Thanks to different types of terminals, vertical as well as horizontal cable connection is possible. Special terminals are available on request. After installation, the bushing conductor stud needs to be secured by means of a nut or adhesive to prevent self-loosening.

Explosion protection

Marking ATEX	II 2G Ex de IIC Gb I M2 Ex de I Mb
Certification	PTB 04 ATEX 1099 U
Other approvals and certificates, see www.bartec.de	
Temperature range	at the place of installation by rated operation of the electrical apparatus -50 °C to +130 °C The maximum current carrying capacity of the bushing conductor stud and the connecting leads shall be established on the basis of the self-heating rate and the enclosure heating rate at the place of installation starting from the maximum permissible ambient temperature.

Technical data subject to change without notice.

The optical fibre bushing is used as an optical fibre cable entry into flameproof enclosures located in hazardous areas. They can also be supplied with plug-in connectors. The optical waveguiders - also known as fibres - are made of glass and resist to mechanical, climatic, chemical and electromagnetic influences. The optical waveguide is most commonly used for carrying signals in the form of electromagnetic waves in the frequency range of visible light. The type and structure of the cable determines its transmission properties.

- Fast, interference free transmission of data in both directions
- Not affected by electromagnetic interference
- High transmission reliability
- High transmission speed
- Corrosion-free contacts
- Simple plug-in connection (low installation costs)
- Reliable signal transmission even over long distances
- Suitable for use under extreme conditions

Standard versions*

Max. quantity of the fibre-optic cables	47 cores
Sleeve size	metric: M16 x 1.5 to M48 x 1.5 non-threaded: Ø 22 mm to Ø 40 mm
Sleeve material	Metal, bare, varnished or galvanised * all other versions on request. Please use the customer requirements form at the end of the chapter!
Installation instructions	Threaded holes into which threaded bushings are screwed must meet the minimum requirements in EN 60079-0 Section 5.3 These fibre optic line bushings are suitable for installing in electric apparatus marked “d” flame-proof enclosure for the IIA, IIB, and IIC groups.
Note	The bushings must be fastened in the electric apparatus in such a way that they are secured against twisting and self-loosening.

Waste water pumps can be fully submersible units. The pump assembly and motor are often separated from each other by an oil fore-chamber sealed by mechanical seals. Any leaks in the shaft seals need to be registered in order to prevent malfunctions or failure of the motor and to arrange for inspections in good time. BARTEC's electrode line bushings Ex + sealed allow signals to be reliably transmitted through the walls of pressure-proof enclosed operating equipment, even in areas in which an explosion hazard exists. Only electrical circuits certified as intrinsically safe may be connected to the electrode line bushing.

The 07-96... type series II 1G line bushing serves as a gas diffusion-proof isolation element for zone 0 (1G/2G) while simultaneously providing an electric connection for leads:

- between flameproof enclosures
- between flameproof enclosures and enclosures with another approved type of protection Category II 2 G
- flameproof enclosures and protected installations Category II 3 G or
- in the safe area

The core piece of this gas diffusion-proof lead-through is a metal plate in which the stud-type bushings are insulated with glass. The electrical connection on both sides of the lead-through can be set forth with metal duct bolts, cable wires or hose lines as required. This connecting area is, or can additionally be, cast with a poured resin. The connector studs, connecting wires or the hose line of the line bushing II 1G must be connected in enclosures which conform to a type of protection standardised according to DIN EN 60079-0. The lead-through is compliant with the pertinent EN 60079-0, EN 60079-1 and EN 60079-7 and EN 60079-26 standards.

There are many connection options available through core wires or threaded bolts.

* Technical specifications can be given in the customer requirements form at the end of the chapter.

Technical data subject to change without notice.

Flameproof Ex d cable entries are elements which allow electrical cables to be introduced into an Ex d enclosure, without danger of explosion. The additional Ex e terminal housing is not required. A main distribution box may be used or the connections can be made outside the Ex-zone. The cable entry consists of a threaded metal sleeve, in which a sheathed cable is anchored and encapsulated. The individual cores are then connected directly inside the flameproof enclosure. The length of cores and cables are customer-tailored. All cables come with standard green-yellow earth leads. The length of engaged thread between the sleeve and the flameproof “d” enclosure must comply with EN 60079-0 and EN 60079-1. The cable entry is normally inserted from the inside of the flameproof enclosure. A special version can be supplied for insertion from the outside, provided that removal is possible with a special tool only. After installation, the cable entry must be protected against turning and loosening, corresponding recommendations can be found under accessories. All cable entries have been tested and certified in accordance with the European standards on electrical equipment for explosive atmospheres EN 60079-0, EN 60079-1. When the 2014/34/EU guideline comes into force on 20. April 2016, explosion protected operating equipment must be properly installed in accordance with EN 60079-14. Among other things, section 10.4.2 requires that **cast, pressure-proof cable insertions according to EN 60079-1 are used for** operating equipment with an internal ignition source for the explosion sub-group IIC and operating equipment with an enclosure volume greater than 2 dm³ in Zone 1. BARTEC offers a wide range of products with EU model test certification.

- Ex e terminal boxes are dispensed with
- Suitable for cables with 1 to max. 49 cores
- Sleeves metric: M16 x 1.5 to M48 x 1.5
Sleeves plug-in: Ø 22 mm to Ø 36 mm
- Compact, space-saving design
- The cores are connected directly to the electrical load at the Ex d side, intermediate terminal positions are dispensed with
- Rated insulation voltage of up to 1000 V for small dimensions
- Permanent heat resistance up to +110 °C

¹⁾ When determining the maximum current carrying capacity of the cores, their self-heating and enclosure heating on site at maximum ambient temperature must be taken into consideration. Other fittings and special sleeves on request. It is essential to submit a customer requirements form that has been filled in correctly and completely. The form can be found in the catalogue at the end of the chapter.

Technical data subject to change without notice.

Line bushings and cable entries must be safe against turning and accidental loosening. The most common fixing methods are shown below.

∅ 36 mm	03-3480-0004

Technical data subject to change without notice.

- Economical, due to high packing density
- Space-saving, due to internal thread
- Fast installation with the small flange versions
- Corrosion-resistant due to high-quality sleeve material
- Bushing stems with suitable thermomaterial to ensure unimpaired signals from thermal sensors

Cable entries

Electrical cable entries are components which facilitate the insertion of electric leads into enclosures while providing a secure seal at the point of entry.

Line bushings

The line bushings allow an electrical connection of apparatus in enclosures or the connection of two enclosures. The standard versions are suitable for the application range of 10⁻⁶ mbar to 63 bar positive pressure depending on the ambient temperature. Depending on the pressure and the medium to be sealed, the bushing / cable entry can be designed for a temperature range of -70 °C to +150 °C. Versions up to 1000 bar are available to suit the temperature at the point of cable entry or bushing and the type of the medium to be sealed. BARTEC cable entries and line bushings in the IP 68 type of protection not only seal the cable sheath, they also protect the inside strands. BARTEC cable entries and line bushings consist in principle of a sleeve into which electric leads and single conductors are embedded in casting resin. Even the standard version of this component series satisfies most of the sealing requirements of modern process technologies. When it is necessary to satisfy higher requirements, versions are available that are better than 10⁻⁶ mbar absolute and higher than 63 bar, sealed by the cast-in stranded conductors. BARTEC line bushings were tested at up to 2000 bar for resistance to oil.

Technical data

Single-core non-sheathed cable

Temperature range	-70 °C to +150 °C
Pressure	up to 200 bar
Vacuum	10 ⁻⁶ mbar
Protection class	IP 65 to IP 68
Materials	nickel-plated brass stainless steel 1.4305 or 1.4571 Steel nickel-plated

Cable entries

Temperature range	-70 °C to +150 °C
Pressure	up to 200 bar
Vacuum	10 ⁻⁶ mbar
Protection class	IP 65 to IP 68
Materials	nickel-plated brass stainless steel 1.4305 or 1.4571 Steel nickel-plated

Applications

Sealed electric distribution boxes; hydraulic plants; nuclear power plants; climatic chambers; nuclear engineering; pneumatic plants; split cage motors; submersible pumps; drying kilns; impregnation plants; vacuum presses; vacuum furnaces.

- Electrical versions

The standard versions have cables with flexible cores of a 0.5 mm² to 35 mm² cross section. Larger and smaller cross sections are available on request. Depending on version, fittings, temperature range and core insulation, a voltage range of up to 6 000 V is possible. IP 68 versions used in temperature measurement circuits, the bushing stems are made of material with appropriate thermal characteristics.

- Versions and dimensions

The standard threaded sleeve can be screwed into thread sizes from M24 x 1.5 to M50 x 1.5. Other dimensions and special threads such as NPT and Witworth pipe threads can be supplied on request. Versions with a plug-in flange can also be supplied. The accommodation of several cables, which may have different core cross sections, in a common sleeve allows compact, dimensioning and economic constructions. Cables with up to 45 cores with cross sections of 0.5 mm² can be put in an M50 x 1.5 sleeve. For versions with long cables, the screw-in solution is not the most advantageous. Here the plug-in versions with mounting flange considerably facilitate installation. The flange may be made to customer specifications.

- Insulation materials

BARTEC insulates with highly filled epoxy resins. Different formulations are used for the various pressure and temperature ranges. The BARTEC epoxy casting material is characterized by its low outgassing. These material have been used most successfully for many years in industrial vacuum engineering. Their maximum baking temperature of +150 °C - depending on the material used - make them an ideal solution for almost all industrial applications. The standard sealing washer is made of VITON. For special application, VITON-FEP-sheathed O-rings can be used. Also available are silicone sealing washers. The versions for higher sealing requirements provide factory-made grooves in the sleeves for the sealing washers.

Single-core non-sheathed cable

Cable entries

Technical data subject to change without notice.

Industrial processes often take place in closed containers under increased pressure or even under vacuum conditions. When electric leads are run through, care must be taken to prevent any transfer of mass through the conductor or drops in pressure/vacuum. BARTEC pressure-proof/vacuum-sealed line bushings provide a simple and cost-effective way of dealing with this problem. These line bushings consist essentially of a metallic sleeve which encapsulates and longitudinally seals the electric conductors in cast resin. This means that sealing is not only ensured along the lengths of the conductors but also through the conductor strands themselves. BARTEC pressure-proof/vacuum-sealed line bushings can be designed for working temperatures of -70 °C to +150 °C depending on the application. Depending on the working temperature and ambient medium, it is possible to control pressure levels of 10⁻⁶ mbar to 200 bar. Depending on the application, it is also possible to use BARTEC line bushings under conditions which deviate from the following technical basic data. They are **not** approved for use in hazardous areas.

Technical data Basic version

Protection class	up to IP 68 for enclosure

Industrial processes often take place within closed containers, under increased pressure or even vacuum conditions. It is therefore of utmost importance that no media leakages or pressure/vacuum drops occur when cables are led in. Our BARTEC pressure and vacuum sealed cable entries provide a simple and cost-effective solution to this problem. The cable entries essentially consist of a metal sleeve encapsulating the whole length of the electric conductors within epoxy-resin. This means that sealing is not only guaranteed for the whole length of the conductors but also through the stranded conductors themselves. Depending on their field of application, BARTEC pressure and vacuum sealed cable entries can be used at temperatures of -70 °C to +150 °C. With regard to the actual temperature and surrounding media, pressures of 10⁻⁶ mbar to 200 bar can be withstood. Our BARTEC cable entries can also be used under conditions that differ from the basic technical data listed below.

They have **not been** approved for use in potentially explosive areas.

BARTEC submersible cable entries maintain their seal even under extreme conditions. Major fields of application are submersible pumps for use areas such as:

- water treatment plants
- sewage treatment plants
- sewage disposal
- building sites

The cable sheath and cores are encapsulated in a special sealing compound. If the cable is damaged, no water can penetrate the cable entries causing a short-circuit. Our BARTEC submersible cable entries are sealed over their whole length. BARTEC submersible cable entries are designed for depths with pressures up to 6 bar. The standard version is threaded, but flanged versions can also be supplied. For these cable entries, BARTEC use as extremely robust NSSHÖU cable resistant to extreme stress such as sewage or chemically aggressive waste water. The basic versions have 4 x 1.5 mm² or 7 x 2.5 mm² cores. For special cables incorporating pilotlines, we offer versions with 7 x 1.5 mm² or when used with oil-filled motors, the cables can be provided with FEP-insulated stranded conductors. The standard version has nickel-plated brass threaded sleeves. For special applications, BARTEC offers threaded sleeves of stainless steel types.

Explosion-proof version (on request).

Industrial processes often take place within closed containers, under increased pressure or even vacuum conditions. It is therefore of utmost importance that no media leakages or pressure/vacuum drops occur when electrical power or signals are led through the container wall. Our BARTEC pressure and vacuum sealed stud-type bushings provide a simple and cost-effective solution to this problem. The stud-type bushings essentially consist of a threaded metal sleeve and the stud forming one block by means of a creepage-proof insulation material. The electrical connection can be made by the user himself with conventional connection systems. The seals can withstand pressures from 10 mbar abs. to 63 bar depending on the type used for the installation. Depending on their field of application, BARTEC pressure and vacuum sealed stud-type bushings can be used at temperatures of -70 °C to +150 °C. Our BARTEC stud-type bushings can also be used under conditions that differ from the basic technical data listed below. They are **not** approved for the use in hazardous areas.

In submersible sewage pumps, motor and pump assembly are often separated by an oil chamber sealed with mechanical seals. To prevent motor malfunctions or breakdowns it is absolutely necessary to detect possible leakages of the shaft seals and to carry out maintenance works in due time. Our BARTEC electrodes help you solve this problem most cost effectively. The electrode essentially consists of a threaded metal sleeve and a metal sensor rod forming one block by means of a creepage-proof insulation material. An appropriate evaluation unit indicates any existing leak or due maintenance in good time. Depending on type and application, BARTEC electrodes can be used for temperatures from -25 °C to +150 °C. They can also be used under conditions that deviate from the following basic technical data.

SIGNALLING DEVICES

- Set in Zone 1/21, Zone 2/22
- Protection class IP 65
- Sound level 105 dB
- Temperature range -40 °C to +50 °C
- Easy to install

Machines and equipment are provided with acoustic warning and emergency devices for the protection of people and the environment. These devices signal hazardous situations and thus allow for instant safety measures to be taken. BARTEC provides a loud signal horn with continuous tone in attractive design. The device is suitable for applications in potentially explosive gas and dust atmospheres without further accessories. The signal horn reliably warns against hazards in a wide temperature range of -40 °C up to +50 °C outdoors and indoors.

- Low power demand due to high lamp efficiency
- Easy installation

Plant and machinery are fitted with visual alarms to give timely warning of dangerous situations and to enable machinery to be shut down before damage occurs. BARTEC flashing lamps are designed for continuous operation. BARTEC's flashing lamps provide information, warnings and alarms on machinery and plant in explosion-endangered areas in Zone 1 and Zone 2, Zone 21 and 22.

Function

The flashing lamp is made of an aluminium Ex d enclosure with a dome made of Borosilikat glass. The connection compartment was designed in the "increased safety" type of protection in conformance to EN 60079-7. An M20 x 1.5 gland is available to facilitate the insertion of the cable. A optional LED flashing lamp is available and can be set on 4 different modes: flashing, flash, permanent and rotating light.

Technical data

Protection class	IP 66/IP 67 according to IEC 60529
Enclosure material	Aluminium, powder-coated with hardened glass dome and with protective cage

Electrical data

Rated voltage	AC 230 V DC 24 V
Flash energy	15 J
Flash frequency	approx. 60/min (1 Hz)
Operating mode	Continuous operation S 1 after IEC 60034-1; DIN EN 60034-1; VDE 0530 level 1
Activation	by connecting with the rated voltage
Temperature range	Service: -55 °C ≤ T _a ≤ +40 °C (T6) (T80 °C) -55 °C ≤ T _a ≤ +55 °C (T5) (T95 °C) Storage: -60 °C to + 80 °C

Dimensions in mm

- Seawater-resistant
- External trigger
- Siren card available
- Wide temperature range
- Multiple dome colors

BARTEC TECHNOR's TNFCD/M series is an extreme duty flash beacon solution for use in hazardous location on- or offshore. Designed for the most demanding environments of the North Sea, the beacons have for more than 25 years proven their excellence, providing a low maintenance solution for operators and rig owners worldwide. Available in Ex de, Ex d or non-Ex. The beacon offers a multiple of options like power on when connected, external triggering or a siren card for acoustic warning.

The range of TNCLS Ex em LED backlights are designed for use to illuminate level gauges in all kinds of industry where an explosive atmosphere may be present. The TNCLS LED back lights are designed to illuminate see through level gauges found in a variety of industries where an explosive atmosphere may be present. The BARTEC TECHNOR back light solution has a proven track record of more than twenty years and is considered by some to be the only choice for low life cycle cost level gauge illumination.

- Low to no maintenance
- Installation kits for high/low temperatures
- Lengths available from 24 cm and up in increments of 1 cm and combinations of units
