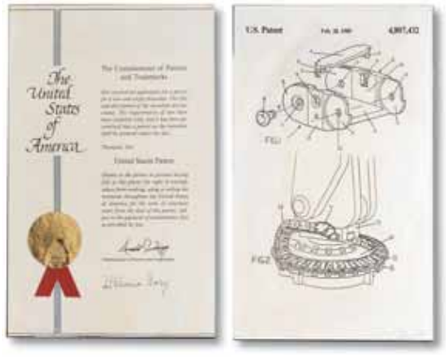
FLEXIBLE CABLES FOR CABLE CHAINS

brevetti stendalto

Summary

Brevetti Stendalto

In the 60's things changed, - also the way of manufacturing, the magic word became "Automation" as the equipment and machines started to operate based on new concepts, which required a new generation of dynamic cable protection. Mr. Giovanni Mauri, (president and founder of Brevetti Stendalto) captured this new demand, he designed and started to propose Nylon cables chains in alternative to old style steel cable chains, which were too heavy and expensive for most of the new modern automation equipment and machines.
From those days, Brevetti Stendalto's cables chains are used for dynamics cables protection on all kinds of equipment around the world.
The continuing evolution of Brevetti Stendalto has brought: a wide range of cables chains for all kinds applications, international patent for Robot circular chains in 1988, ISO 9001 qualification, branches in France 1998 and Germany 1999, new modern facilities in Monza, Italy and a consolidation of our international sales net in all industrialized countries.
Today's Brevetti Stendalto is projecting its future in two main directions; large cable chain projects and problem solving supply. For large cable chain projects, Brevetti Stendalto is approaching a leading position in this sectors with increasing demand, as offshore platforms and harbour crane equipment.
To give an idea of what technological wise is reached for such applications, where the dynamic power supply heavily determine the entire project, Brevetti Stendalto's test rig, tests the cable chains at a constant speed of 8 m/s for 130 m travel.
With regards to "Problem solving supply" , Brevetti Stendalto is offering a new supply concept; cable chains completely finished with cables and connectors. For the customer it means reduced assembling and installation time, reduction of possible problems, which again express the philosophy of Brevetti Stendalto: Free to project.



Patent for the circular nylon cable chain.

Chain/Cable testing rig for long travel: Tests at 8 m/s for 130 m travels.

Applications

From our initial experience from the machine tool centres, more than 30 years ago, Brevetti has acquired the technical know-how to diversify it product range. Nowadays the cables chains are offered together with our range of Highly flexible as a guaranteed package solution for all kinds heavy duty applications for dynamic power supply as: Industrial robots, high-speed automation, automatic storage systems, container cranes.
Our package solution of Brevetti cable chains & flexible chains are also being implemented in many sectors of engineering: steel works, offshore, cranes, harbour cranes, compost plants, waste-to-energy plants, mining, nuclear plants, etc

Nylon sliding chains type M80 installed on waste incineration plant "Vestforbrænding" in Denmark

Technical data

Nominal voltage:	600/1000 V
Testing voltage:	3000 V
Temperature range:	-40°C to + 80°C
Speed:	300 m/min
Acceleration:	25 m/s²
Burning characteristics:	
IEC 60332.1, VDE 0472-804 test B; UL 1581	
Oil resistance:	
VDE 0472 part 803/B	
Mud resistance: NEK 606	
Homologation UL:	
UL-AWM 80°C 1000V	

Construction

Conductor:
High-flexible class 6 complying with:
IEC 60228

Insulation:
Polyolefin (PP)

Jacket material:
PUR complying with standard UL/CSA, colour black

Shielding:
Tinned copper braid: > 85%

BC425-P

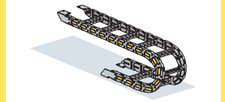
Speed: 300 m/min
Acceleration: 25 m/s²

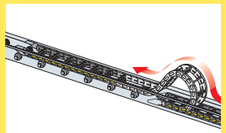
Complying with UL for the European and USA market

Nominal voltage 600/1000 V

Polyurethan jacket resistant to hydrolysis, microbics and oils

Suitable for outdoor applications at -40°C





RoHS 2002/95/EC

Halogen free

For further information please consult Brevetti Stendalto's Technical Office

BC426-P

BTC421LC

Speed: 300 m/min
Acceleration: 50 m/s²

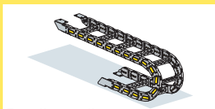
High flexible, small outer dimension, with low min. bending radius

Complying with UL and CSA for the European and USA market

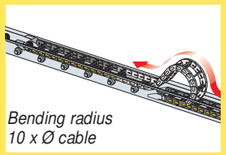
Polyurethan jacket resistant to hydrolysis, microbics and oils

Suitable for outdoor applications at -40°C

TECHNICAL DATA
see page. 28



Bending radius 7,5 x Ø cable



Bending radius 10 x Ø cable

Current carrying capacity and reduction factors

Thermal influence
Cables have to be chosen, layed or installed in a way that the expected current heat emission is not impeded and thus doesn't create any fire risk for adjacent materials.
The limit temperatures of the individual conductor types are shown in the catalogue.
The indicated values shall not be exceede by the combined effects of internal current heat and envirromental conditions considered the max temperature ratify of the insulation compound.

Installation

For correct installation of cables in the cable chain, it is important to follow the guidelines listed below:

1 - The cables have to be installed and unrolled from the drum carefully to avoid damage. It is therefore important to follow the indications in Figure.1. The coil should not be unrolled from the centre, but it should be placed on a support or on a turning plane and then be unrolled starting from the external ends.

2 - Check the minimum allowed bending radius of the chosen cable and compare it with the bending radius of the chain. For a correct installation, the last mentioned should be larger compared to the bending radius of the cable.

3 - There must be at least 10%-20% free space between the cable diameters and the internal dimensions of the chain. Install the cables/hoses symmetrically in the chain with the larger and heavier towards the outside and the smaller and lighter in the centre. Further, it is necessary to separate the cables using the separators, available for all the chains, or the split cross pieces with holes done in the appropriate sizes according to the external diameter of the cable. (Figure 2) It is important, when having high velocities and accelerations, to avoid the superimposing of the cables. Avoid contact between the different cables and hoses internally in the chain.

4 - The cables/hoses must be placed and installed in such a way so that they can move freely side ways during the movement of the chain and also so that in the bending curve they do not cause any tension or traction on the cable chain.

5 - The cables must be installed and fixed using the appropiate accessories at both extremities of the chain.

6 - Verify the installation of the cables in the chains with Brevetti Stendalto's technical office or request a personalised project by filling in the appropriate
module

Zinc-plated Steel Cable Clamps

SPECIFICATIONS

1) Stainless steel AISI 304 clamp
2) Self-locking AISI 304 pressure screw, hexagon headed, driver cut+cross. Fixing Torque 1-2Nm.
3) Stainless steel sliding pressure plate.
4) SEP black P.A. fiberglass saddles.

RESISTANCE TESTS

1) UV Test BS-ISO 105-B06
2) Vibration test conforming to UNI 60068-2-6
3) Operating temperature: -30°C + 120°C

MOUNTING INSTR.

On request

Nylon tie-wraps

As an alternative to steel cable clamps, Brevetti Stendalto offers the possibility to mount on the end-brackets nylon tie-wraps, which allow a more flexible cable fixing. For further information on this system, please consult our cable chain catalogue.
