Introduction

Innovative drive technology for all industries, applications and power classes

Overview

G_D081_EN_004558

Innomotics motors

Innomotics has the most comprehensive portfolio of electric motors worldwide. From energy-efficient, low-voltage motors through servomotors with high dynamic performance up to well-proven DC motors and powerful high-voltage motors. Innovative drive technology for all industries, applications and power classes.

Outstanding performance, quality, efficiency, and compactness.

The Innomotics motor portfolio:

- _ Innomotics Low-Voltage Motors for line and converter operation:
For standard applications with low to high motor power ratings
- _ Innomotics Motion Control motors:
For highly dynamic and extremely precise applications in mechanical engineering
- _ Innomotics DC motors:
For DC applications
- _ Innomotics High-Voltage Motors:
For line and converter operation in standard applications with high to very high motor power ratings.

Innomotics Low-Voltage Motors for line and converter operation

Innomotics Low-Voltage Motors are the right choice for solving drive tasks efficiently and reliably. In contrast to Motion Control motors, which are additionally characterized by very high dynamic response and precision, the more favorably priced low-voltage motors are predestined for continuous or periodic, as well as powerful motions with fixed or variable speed, such as in pumps, fans, compressors, conveyor belts, lifts, hoisting and traversing gear, winders, mixers, kneaders and centrifuges.

Innomotics Low-Voltage Motors are characterized by very high reliability, ruggedness, and efficiency in operation.

They are available in diverse series and versions, which means that the appropriate motor can always be found for any application in an industrial or commercial environment, as well as in building management systems, shipbuilding and infrastructure.

Innomotics Low-Voltage Motors comply with the most important relevant standards and guidelines and are available in IEC, NEMA, and APAC versions. They can be used all over the world, and have a global, long-term spare parts service. For these reasons, they provide a sustainable basis for export-oriented, globally operating companies to enable them to conduct their international business efficiently.

Overview

Innometrics GP – General Purpose motors are the most economical solution for use under standard environmental conditions. Typically, these motors have an aluminum housing and are characterized by their low weight. Innometrics GP motors are available in the power range from 0.09 to 45 kW.

Available motor variants:

- _ Induction motors, optimized for line operation
 - _ in efficiency classes IE4, IE3, IE2, IE1
 - _ as a standards-compliant version or compact version with increased power (IE3, IE2, IE1)
 - _ as a 2-, 4-, 6-, 8-pole version
 - _ as pole-changing motors
 - _ as an APAC version for use in the ASEAN Pacific region (IE3, IE2)
 - _ as a NEMA version for use in the NAFTA area
 - _ electrically (mechanically acc. to IEC): Eagle Line
 - _ electrically and mechanically
 - _ can optionally be run on a converter
- _ Motors optimized for operation on frequency converters
 - _ as a Innometrics GP – VSD10 line induction motor
 - _ as a Innometrics GP – VSD4000 line synchronous reluctance motor for particularly efficient operation in conjunction with SINAMICS converters.
- _ Different types of construction, voltage versions, and a wide variety of options/add-ons for precise adaptation of the motors to application and customer-specific requirements.

Innometrics SD – Severe Duty motors have a rugged cast-iron housing, which means that they are also suitable for use in harsh to very harsh environments. With a wide power range from 0.09 to 1000 kW, Innometrics SD motors are the basis for machine and plant builders and owners who require a universal motor for flexible requirements and conditions of use.

Available motor variants:

- _ Induction motors, optimized for line operation
 - _ in efficiency classes IE4, IE3, IE2, IE1
 - _ standards-compliant version or compact version with increased power (IE3, IE2, IE1)
 - _ as a 2-, 4-, 6-, 8-pole version
 - _ as an APAC version for use in the ASEAN Pacific region (IE3, IE2)
 - _ as a NEMA version for use in the NAFTA area
 - _ electrically (mechanically acc. to IEC): Eagle Line
 - _ electrically and mechanically
 - _ can optionally be run on a converter
- _ Motors optimized for operation on frequency converters
 - _ as a Innometrics SD – VSD10 line induction motor
 - _ as a Innometrics SD – VSD4000 line synchronous reluctance motor for particularly efficient operation in conjunction with SINAMICS converters.
- _ Basic Line and particularly rugged Performance Line
- _ Different types of construction, voltage versions, and a very wide variety of options/add-ons for precise adaptation of the motors to application and customer-specific requirements.

Innometrics SD – next generation is the next innovation step in low-voltage motors.

In particular, these motors offer the following advantages for customers:

- _ More efficiency in the engineering process due to the Digital Twin Concept.
- _ Further increase in availability due to the Smart Motor Concept.

Innometrics XP – Explosion Proof motors are designed for use in hazardous environments. For all conditions of use and hazard zones, e.g. in explosive gas atmospheres of the chemical/petrochemical sector or in explosive dust atmospheres in the mining or food and beverage sectors, there are suitable motor versions in aluminum and cast iron that ensure maximum safety and satisfy the relevant standards and regulations.

Innometrics XP motors are available in the power range from 0.09 to 460 kW.

Available motor variants:

- _ Motors for use in Zones 1, 2, 21 and 22
- _ Induction motors optimized for line operation
 - _ in efficiency classes IE3, IE2, IE1
 - _ as a 2-, 4-, 6-, 8-pole version
 - _ as a NEMA version for use in the NAFTA area
- _ For motors suitable for line and converter operation
- _ Basic Line and particularly rugged Performance Line in a cast-iron housing
- _ Different types of construction, voltage versions, and a wide variety of options/add-ons for precise adaptation of the motors to application and customer-specific requirements.

Innometrics DP – Definite Purpose motors are low-voltage motors for application-specific, customized and industry-specific use.

They have the required respective industry-specific properties and certificates.

Innometrics DP motors:

- _ Crane motors for use in cranes (primarily for hoisting gear)
- _ Marine motors for use on ships
- _ Steel plant motors for use in the steel industry
- _ Roller table motors for roller table applications in the steel industry

Innometrics TN – Transnorm motors are low-voltage motors for line and converter operation in a cast-iron housing with higher power ratings up to 5000 kW from shaft height 315. In non-standard (Transnorm) motors, the assignment of the power rating and shaft extensions to frame size is not standardized.

Innometrics HT – High Torque motors are permanent-magnet synchronous motors and are used in applications that require extremely powerful drives without gear units, even at low speeds.

Introduction

Innomotics Digital Data App

Overview

The Innomotics Digital Data App provides access to technical data, spare part information, and operating instructions for Innomotics GP/SD motors any time any place. This gives our customers quick access to important contents of the digital twin. This simplifies our customers' processes.

By scanning the data matrix code on the additional rating plate of the motor, the relevant electrical and mechanical data can be displayed for this motor.

- _ Electronic and mechanical rating plate data
- _ Additional motor data
- _ Service information, e.g. display of the spare part list
- _ Display of the ordering options installed
- _ Documentation and manuals

The Innomotics Digital Data App is available for Apple and Android devices and can be installed from the respective stores. To do this, please scan the appropriate QR code.

Benefits

- _ Shorter commissioning and service times
- _ Fast access to relevant service information
- _ Online availability of the motor data for integration into ERP systems

1

Overview

Harmonization of the efficiency classes

Various energy efficiency standards exist worldwide for induction motors. To promote global standardization, the international standard IEC 60034-30-1:2014 (Rotating electrical machines – Part 30-1: Efficiency classes of single-speed, three-phase, cage-induction motors (IE code) were defined and are used as the basis for local standards in most countries. Only the NAFTA countries USA, Canada, and Mexico¹⁾ use the differing standards of NEMA MG1. Standard IEC 60034-30-1:2014 divides low-voltage induction motors into efficiency classes IE1 to IE4.

Applicability (excerpt)

- _ Low-voltage motors up to 1000 V (50/60 Hz in line operation)
- _ Power rating: 0.12 to 1000 kW; with 2, 4, 6, or 8 poles
- _ Operating mode: S1

The efficiencies in IEC 60034-30-1 are based on the method for determining losses according to IEC 60034-2-1:2014.

IE efficiency classes

The efficiency classes are grouped according to the following nomenclature (IE = International Efficiency):

- _ IE1 (Standard Efficiency)
- _ IE2 (High Efficiency)
- _ IE3 (Premium Efficiency)
- _ IE4 (Super Premium Efficiency)

IEC 60034-30-1 EU and other countries	NEMA MG1 NAFTA (USA, Canada, Mexico ¹⁾)	GB 18613-2020 China
IE4		Grade 2 (IE4)
IE3	Premium Efficient (60 Hz)	Grade 3 (IE3)
IE2	Energy Efficient (60 Hz)	

Comparison of IE efficiency classes

Note:

All efficiency classes are stated with reference to 50 Hz data (unless specified otherwise).

IE1-IE4 efficiencies, 4-pole, 50 Hz, depending on the power

Minimum Energy Performance Standard (MEPS)

¹⁾ Additionally required NOM certification.

Introduction

Efficiency classes and efficiencies according to IEC 60034-30-1

Overview

Background information

Comprehensive laws have been introduced in the European Union with the objective of reducing energy consumption and therefore CO₂ emissions. EU Regulations 640/2009 and 2019/1781 concern the energy consumption or efficiency of induction motors in the industrial environment. This regulation is in force in every country of the European Economic Area until June 30, 2021. Effective July 1, 2021, the new regulation (EU) 2019/1781 will come into force. The main contents of and exceptions to both regulations are explained below.

Motor exclusively for use in transportation equipment for passenger and freight transportation corresponding to EVPG §1

To ensure that a "marine" motor (with "marine" option Exx and really use in a ship) will be considered as an exception from EU regulation it's necessary to add order code **D23** (Motor exclusively for use in transportation equipment for passenger and freight transportation corresponding to EVPG §1 dated February 27, 2008).

Train motors (with order code L91 and L92) are totally designed for use only in a rail vehicle, and therefore order code D23 is not needed.

For more information on internationally applicable standards and legal requirements, visit:
www.meps.innomotics.com

Regulation (EC) 640/2009

Exceptions

- _ Motors that are designed to be operated totally submerged in a liquid;
- _ Motors fully integrated into a product (e.g. a gear unit, pump, fan or compressor) whose energy efficiency cannot be measured independently of the product;
- _ Motors that are specially designed for operation under the following conditions:
 - _ At altitudes greater than 4000 meters above sea level;
 - _ At ambient temperatures above 60 °C;
 - _ At maximum operating temperatures above 400 °C;
 - _ At ambient temperatures below -30 °C
 - _ With cooling liquid temperatures at the product intake of below 0 °C or above 32 °C;
 - _ In hazardous areas in the context of Directive 2014/34/EU of the European Parliament and Council;
- _ Brake motors

The following motors are not affected:

- _ Pole-changing motors
- _ Synchronous motors
- _ Motors for intermittent duty S2 to S9
- _ Single-phase motors
- _ Motors specially developed for converter operation in accordance with IEC 60034-25

The following changes came into effect on the dates below:

From January 1, 2015:

Compliance with the legally required minimum efficiency class IE3 for a power range from 7.5 to 375 kW (2-, 4-, 6-pole) or, as an alternative, IE2 motor plus frequency converter.

From January 1, 2017:

Compliance with the legally required minimum efficiency class IE3 for a power range from 0.75 to 375 kW (2-, 4-, 6-pole) or, as an alternative, IE2 motor plus frequency converter.

From July 1, 2021:

Compliance with the legally required minimum efficiency class IE2 for a power range from 0.12 to 0.75 kW (2-, 4-, 6-, and 8-pole), exception: Ex eb motors

Compliance with the legally required minimum efficiency class IE3 for a power range from 0.75 to 1000 kW (2-, 4-, 6- and 8-pole), exception: Ex eb motors

From July 1, 2023:

Compliance with the legally required minimum efficiency class IE2 for a power range from 0.12 to 1000 kW (2-, 4-, 6- and 8-pole) of Ex eb motors with increased safety and of single-phase motors with a rated output power of at least 0.12 kW.

Compliance with the legally required minimum efficiency class IE4 for a power range of 75 kW to 200 kW (2-, 4-, 6-pole). Exception: Motors with a brake, Ex eb motors with increased safety or other explosion-protected motors.

Changes according to EU motor regulation 640/2009 Motor series Innomotics VSD10 (1LE1092/1LE1592) and VSD4000 (1FP10/1FP15) are the preferred motor types for converter operation.

Overview**New regulation (EU) 2019/1781**Exceptions

- _ Motors that are designed to be operated totally submerged in a liquid
- _ Motors fully integrated into a product (e.g. a gear unit, pump, fan or compressor) whose energy efficiency cannot be measured independently of the product
- _ Motors that are specially designed for operation under the following conditions:
 - _ At altitudes greater than 4000 meters above sea level
 - _ Where ambient temperatures exceed 60 °C
 - _ At maximum operating temperatures above 400 °C
 - _ At ambient temperatures below -30 °C
 - _ With cooling liquid temperatures at the product intake of below 0 °C or above 32 °C
 - _ In hazardous areas as defined in Directive 2014/34/EU of the European Parliament and Council that are designed and certified for underground mining applications
 - _ Motors with an integrated brake that is an integral part of the interior motor structure and can neither be removed or powered from a separate source during motor efficiency testing.
 - _ Motors with an integrated speed control (compact drives), whose energy efficiency cannot be tested independently of the speed control

The following motors are not affected:

- _ Pole-changing motors
- _ Synchronous motors
- _ Totally enclosed, naturally ventilated motors (TENV motors);
- _ Motors specially developed for converter operation in accordance with IEC 60034-25

Other potential restrictions as described in the technical documentation may apply to converter operation and must be taken into account!

The following are generally recommended for converter operation:

- _ Motor temperature detection by embedded temperature sensor
- _ Bearing insulation with frame size 225 and larger

Note:

Different minimum efficiency class requirements apply in China, Korea, and Australia. Other countries will be available soon.

Motors for the North American market

The Energy Policy Act (EPAct) was superseded in December 2010 by the Energy Independence Security Act (EISA). The following motors must fulfill the NEMA Premium Efficient Level:

- _ 1 hp (0.75 kW) ... 500 hp (373 kW): 2-, 4-pole
- _ 1 hp (0.75 kW) ... 350 hp (261 kW): 6-pole
- _ 1 hp (0.75 kW) ... 250 hp (186 kW): 8-pole
- _ 2-, 4-, 6- and 8-pole
- _ ≤ 600 V
- _ NEMA Design A, B, or C. IEC Design N or H

For details, see NEMA MG1, Table 12-11 and Table 12-12.

IEC: International Electrotechnical Commission

EEA: European Economic Area

Introduction

Catalog orientation and drive selection

Overview

Steps for drive selection

1

Step 1		Orientation and general technical information	
Technical requirements for the motor	Rated frequency and rated voltage	3 AC 50/60 Hz, 400, 500 or 690 V	
	Operating mode	Standard duty (continuous duty S1 according to EN 60034-1)	
	Degree of protection or type of explosion protection required	IP..	
	Rated speed (No. of poles)	$n = \dots\dots\dots$ rpm	
	Rated power	$P = \dots\dots\dots$ kW	
	Rated torque	$T = P \cdot 9550 / n = \dots\dots\dots$ Nm	
Type of construction		IM..	
Step 2		Preselection in accordance with the application	
Determination of the installation conditions and definition of the application, if necessary	Ambient temperature	$\leq 40 \text{ }^\circ\text{C}$	$> 40 \text{ }^\circ\text{C}$
	Installation altitude	$\leq 1000 \text{ m}$	$> 1000 \text{ m}$
	Factors for derating	None Determine the factor for derating (for reduction factor, see "Coolant temperature and installation altitude" on page 1/36)	
Cross-reference to other motors		These include motors for special requirements in the area of explosion protection and applications or motors according to the NEMA standard.	
Step 3		Preliminary selection of the motor	
Determination of the range of possible motors		Select the frame size and therefore the possible motors on the basis of the following parameters: efficiency class, cooling method, degree of protection, rated power, rated speed and rated torque range. <u>Note:</u> The standard temperature range of the motors is from -20 to +40 °C.	

Layout of the selection and ordering tables and description of the columns of the table headers

Power, frame size, temperature class			Operating values at rated power													Article No., add. data				
Table header - Meaning																				
$P_{\text{rated, 50 Hz}}$	$P_{\text{rated, 60 Hz}}$	$P_{\text{rated, 60 Hz}}$	Frame size	$n_{\text{rated, 50 Hz}}$	$T_{\text{rated, 50 Hz}}$	Different IE class	CC No. CC032A	$\eta_{\text{rated, 50 Hz, 4/4}}$	$\eta_{\text{rated, 50 Hz, 3/4}}$	$\eta_{\text{rated, 50 Hz, 2/4}}$	$\cos\phi_{\text{rat ed, 50 Hz, 4/4}}$	$I_{\text{rated, 50 Hz, 400 V}}$	$T_{\text{LR}} / T_{\text{rated}}$	$I_{\text{LR}} / I_{\text{rated}}$	$T_{\text{B}} / T_{\text{rated}}$	$L_{\text{pFA, 50 Hz}}$	$L_{\text{WA, 50 Hz}}$	Article No.	$m_{\text{IM B3}}$	J
kW	kW	hp	FS	rpm	Nm			%	%	%		A				dB (A)	dB (A)		kg	kgm ²

Legend:

Primary key
Standard values for all motors
Specially for NEMA Energy Efficient MG1 motors, Table 12-11 or NEMA Premium Efficient MG1 motors, Table 12-12

Note on pole-changing motors:

The operating values are specified here for the rated power for the two different pole numbers.

Step 4		Detailed selection of the motor in the selection and ordering data tables	
Determination of the basic Article No. of the motor	Determine the motor Article No. according to the following parameters: rated power, rated speed, rated torque and rated current from the "Selection and ordering data" for the motors that have already been identified as possibilities.		
Step 5		Selection of the special versions or options	
Completing the motor Article No.	Determine special versions and the associated order codes (e.g. special voltages and types of construction, motor protection and degrees of protection, windings and insulation, colors and paint finish, mountings and mounting technology, etc.).		
Step 6		Additional information for motor selection	
Checking the required dimensions	The dimensions are specified in each catalog section under the heading of "Dimensions".		
Selection of the frequency converter, if required	Article No. of the converter as well as its selection, see Catalogs D 11, D 18.1, D 21.3, D 31.1, D 31.2 and D 31.5.

Introduction

Cut-away diagram of a low-voltage motor

Overview

Overview

To protect the drives against corrosion and external influences, high-quality paint systems are available in various colors.

Additional identification code -Z with order code							
S00 7)	S01	Standard version ⁶⁾	S02 ⁶⁾	S03 ^{6) 8)}	S04 ⁶⁾	S08 9)	S09 9) 10)
Paint systems, suitability for atmospheric-corrosivity categories in accordance with EN ISO 12944-2:2017							
Unpainted, but unfinished cast-iron surfaces are primed	Unpainted, motor primed	C2 Standard paint system	C3 Special paint system	C4 Special paint system "sea air resistant"	C5 Special paint system "offshore"	C5mid Special paint system with durability "medium"	CX Special paint system for offshore with durability "high"

Use

							
The motors can be supplied unpainted on request.	The motors can be supplied with just a primer coat on request.	Indoor unheated spaces with varying temperature and relative humidity, low frequency of condensation and low pollution. Outdoor in dry and cold zones with a short time of wetness, low pollution.	Moderate frequency of condensation and medium pollution (SO2 or chlorides), urban areas, subtropical and tropical zone with low pollution. Standard paint system for VIK design (CO2).	High frequency of condensation and high pollution, industrial processing plants, polluted urban areas, coastal areas without spray of salt water or exposure to strong effect of de-icing salts.	ISpaces with very high pollution from production process, outdoor installations exposed to direct weather conditions, significant effect of SO2 or chlorides, offshore maritime climate.	Industrial areas with high frequency of condensation, humidity, pollution, and aggressive atmosphere. Coastal areas with high salinity, sheltered positions on coastlines, unventilated buildings in subtropical and tropical zone.	Offshore areas with high salinity, spaces with almost permanent condensation or extensive periods of exposure to extreme humidity effects. Industrial areas with extreme aggressive atmosphere with high pollution. Unventilated buildings in humid tropical zones exposed to outdoor factors to an extent that is particularly corrosion-stimulating.

Durability according to EN ISO 12944-1:2017							
-	-	C2 low	C3 low	C4 low	C5 low	C5 medium	C5 high
Also fulfills requirements of categories							
-	-	-	C2 medium	C2 high C3 medium	C3 high C4 medium	C4 high	C5 very high
Total film thickness for outer surface - nominal film thickness in µm - aluminum / cast iron ^{2) 3)}							
0 / 30 ^{4) 5)}	30 / 60	30 / 60	60 / 90	120 / 150	- / 170	- / 230	- / 400

Table continues on the next page.

- 1) Machined laminated rotor core, shaft, inner diameter of cast-iron housing, interior surfaces of cast-iron bearing plates.
- 2) Total film thickness:
 - The specified film thickness represents average values for the external motor surfaces.
 - The film thickness may differ at inaccessible locations (pockets/recesses or bases of ribs).
- 3) The paint coat can become electrostatically charged where there is a thickfilm. Electrostatic discharges can occur. There is a risk of explosion if potentially explosive mixtures are also present at this moment. This can result in death, serious injury or material damage. When painted surfaces are recoated, one of the following conditions must be fulfilled:
 - Limit the total paint film thickness according to the explosion protection group:
 - _IIA, IIB: Total paint film thickness ≤ 2 mm
 - _IIC: Total paint film thickness ≤ 0.2 mm for motors of group II (gas)
 - Limit the surface resistance of the paint used:
 - _Surface resistance ≤ 1 GΩ for motors of groups II and III (gas and dust)
 - Charge transfer limit:
 - _60 nC for group I or group IIA devices
 - _25 nC for group IIB devices
 - _10 nC for group IIC devices
 - _200 nC for group III devices
 - Breakdown voltage ≤ 4 kV for explosion group III (dust only)
 - Note: Innomatics motors are optionally also certified in gas group IIC for a film thickness of more than 200 µm. Paints with film thickness exceeding 200 µm have been tested for electrostatic charging. Motors with a coating thickness exceeding 200 µm may only be painted over if the conditions mentioned above are complied with.
- 4) Aluminum motors/components without a paint finish already meet the requirements for corrosivity class C2. It is not therefore necessary to apply paint to components that are not visible. The paint finish is therefore applied only for the purpose of coloring.
- 5) Aluminum motors with cast-iron components (e.g. DE bearing plate) have a primer coat of > 30 µm on cast-iron components.
- 6) Innomatics XP cast-iron motors suitable for dust hazardous areas (zone 21/22) are used conductive paint systems with color shades available.
- 7) Not possible for Innomatics XP cast-iron motors suitable for dust hazardous areas (zone 21/22).
- 8) Innomatics XP aluminum motors suitable for dust hazardous areas (zone 21/22) are used conductive paint systems with color shades available.
- 9) Conductive paint systems with color shades available according to tables in the page 1/16.
- 10) When ordering with order code **S09**, order code **F74** and **M11** included.

Introduction

Colors and paint finish

Overview

Other available order codes

S05¹⁾ **Interior paint -finish**, all bare internal components primed with rust inhibitor. The motors can be supplied with internal paint finish on request. Recommended when there is a risk of heavy condensate formation.

S06^{6) 8)} **Polyurethane-based top coat**, can only be ordered with **S03** and **S04** (with **S08** and **S09** included as standard with Polysiloxan). Exposure to direct sunlight (UV light) may cause a change in color. When color stability is a requirement, a polyurethane-based paint system is recommended for the top coat (RAL 7030). Colors other than RAL 7030 are available on request.

Top coat colors

Standard version: RAL 7030 (stone grey)

Available colors: Alternative standard and special RAL colors must be ordered with order code **Y53**, **Y56** or **Y66** and specification in plain text of the required RAL number (or another number when not RAL). (See tables for order codes **Y53**, **Y56** and **Y66** on the following page for selection of available numbers/colors). **S06** is available only in standard RAL 7030.

Treatment of bare metal areas of shaft extensions and flanges

Coated with anti-corrosion agent that repels water and palm sweat.

Data apply for individual packaging. Wire-lattice pallets can be used, order code **B99**.

Safety notes

Printed safety notes in German/English and safety notes in the language of the country of use are supplied as standard with each motor

Motor documentation

Motor documentation is available online by selecting the motor in the Innomotics Configurator and by downloading the required documents.

Optional single documentation ordered with the motor, e.g.:

B02: Acceptance test certificate 3.1 in accordance with EN 10204,

B60: Electrical data sheet,

B61: Dimensional drawing

Optional documentation package ordered with the motor:

B90: Documentation package "Basic"

B91: Documentation package "Advanced"

B92: Documentation package "Projects"

Test certificates

Inspection certificate 3.1 in accordance with **EN 10204** – Order code **B02**

An inspection certificate 3.1 in accordance with EN 10204 can be supplied for most motors.

The delivery time for the manufacturer's test certificate may differ from the delivery time for the motor and will be dispatched by E-mail.

Type test with temperature-rise run for horizontal motors

_ **With acceptance** – Order code **B83**

_ **Without acceptance** – Order code **B82**

During the type test, a temperature-rise test is performed; no-load, short-circuit, and load characteristics are recorded; the iron losses and friction losses are determined and the efficiency is calculated from the summed losses. This option is only applicable to motors with a horizontal type of construction. Acceptance testing is performed by an external representative (e.g. customer, classification society). No acceptance test is performed when order code **B82** is stated.

The measurement uncertainty is not taken into account when determining a statement of conformity (according to clause 4.2.1 of ILAC-G8:09/2019).

Acceptance is offered in, on-site in a factory or remotely. Remote acceptance is available in two options:

Remote Acceptance B77: Acceptance process shared via MS Teams

Hybride Acceptance B78: combined on-site acceptance with remote acceptance

Order codes B77 and B78 may only be used in conjunction with order code B83.

Overview**Standard warranty and extension of liability for defects**

The standard warranty period is quoted in the standard conditions of supply and delivery and is 12 months. This is valid if nothing else is stated. It is possible to obtain an extension of the liability for defects beyond the standard liability period.

Motors	Series	Standard warranty	Extension of the liability for defects
Innomotics GP	1LE10	12 months	Not available
Innomotics SD	1LE15 / 1LE55 Basic Line	12 months	1LE1 see page 2/132 1LE5 see page 3/39
Innomotics SD	1LE16 / 1LE56 Performance Line	36 months	1LE1 not available 1LE5 see page 3/39
Innomotics GP VSD4000	1FP10	36 months	Not available
Innomotics SD VSD4000	1FP15	36 months	Not available
Innomotics GP VSD10	1LE109	12 months	Not available
Innomotics SD VSD10	1LE159	12 months	see page 4/130
Innomotics XP	1MB10	12 months	Not available
Innomotics XP	1MB151 / 1MB551 / 1MB581 Basic Line (Ex tb), 1MB152 / 1MB552 / 1MB582 Basic Line (Ex tc), 1MB153 / 1MB553 / 1MB583 Basic Line (Ex ec)	12 months	1MB1 not available 1MB5 see page 5/120
Innomotics XP	1MB161 / 1MB561 Performance Line (Ex tb), 1MB162 / 1MB562 Performance Line (Ex tc), 1MB163 / 1MB563 Performance Line (Ex ec)	36 months	1MB1 not available 1MB5 see page 5/120
Innomotics XP	1MB154 / 1MB554 Basic Line (Ex eb)	12 months	see page 5/113
Innomotics XP	1MB164 / 1MB564 Performance Line (Ex eb)	36 months	Not available
Innomotics XP	1MB155 / 1MB555 (Ex db, Ex db eb)	12 months	see page 5/118

For the case of a new product order

With the following optional order suffixes listed in the table, extension of the liability for defects beyond the standard liability period is possible in conjunction with a new order for a product.

The markup on the product price is graded according to the duration of the extension.

Extension of the liability for defects for 1LE15, 1MB15, 1LE5, and 1MB5 motors

Additional identification code - Z with order code	Description
Q80	Extension of the liability for defects period by 12 months to a total of 24 months (2 years) from delivery
Q81	Extension of the liability for defects period by 18 months to a total of 30 months (2.5 years) from delivery
Q82	Extension of the liability for defects period by 24 months to a total of 36 months (3 years) from delivery
Q83	Extension of the liability for defects period by 30 months to a total of 42 months (3.5 years) from delivery
Q84	Extension of the liability for defects period by 36 months to a total of 48 months (4 years) from delivery
Q85	Extension of the liability for defects period by 48 months to a total of 60 months (5 years) from delivery

Wearing parts (bearings) are excluded from the warranty extension.

Introduction

Versions in accordance with standards and specifications

Overview

Applicable standards and specifications

The 1LE motors comply with the IEC 60034-1 series of international product standards for rotating electrical machines and, in particular, those parts that are listed in the table below.

Title	IEC/EN	DIN EN
General specifications for rotating electrical machines	IEC 60034-1, IEC 60085	EN 60034-1
Specification of the losses and efficiency of rotating electrical machines	IEC 60034-2-1	EN 60034-2-1
General-purpose three-phase induction motors having standard dimensions and powers	IEC 60072 Mounting dimensions and power series only (no assignment of frame size to power)	IEC 60072-1 Mounting dimensions according to IEC 60072 and power assignment for Europe
Starting performance of rotating electrical machines	IEC 60034-12 ¹⁾	EN 60034-12 ¹⁾
Terminal designations and direction of rotation for electrical machines	IEC 60034-8	EN 60034-8
Designation for types of construction, mounting, and terminal box position (IM code)	IEC 60034-7	EN 60034-7
Terminal box cable entries	–	DIN 42925
Built-in thermal protection	IEC 60034-11	EN 60034-11
Noise limits of rotating electrical machines	IEC 60034-9	EN 60034-9
IEC standard voltages	IEC 60038	IEC 60038
Cooling methods of rotating electrical machines (IC code)	IEC 60034-6	EN 60034-6
Vibration severity of rotating electrical machines	IEC 60034-14	EN 60034-14
Vibration limits	–	ISO 10816
Degrees of protection for rotating electrical machines (IP code)	IEC 60034-5	EN 60034-5
International efficiency classes for rotating electrical machines (IE code)	IEC 60034-30-1	EN 60034-30-1
In addition, the following applies to Ex motors:		
General provisions	IEC/EN 60079-0	EN 60034-30-1
Flameproof enclosure "d"	IEC/EN 60079-1	EN 60079-1
Increased safety "e"	IEC/EN 60079-7	EN 60079-7
Type of protection "n" (non-sparking)	IEC/EN 60079-15	EN 60079-15
Areas containing flammable dust	IEC/EN 60079-31	EN 60079-31

The following applies to explosion-protected motors:

Since the requirements of explosion-protected motors comply with the European standards EN 60079-0, EN 60079-1, EN 60079-7, EN 60079-15, EN 60079-31 and Directive 2014/34/EU (ATEX 95), the certificates issued by authorized testing agencies (PTB, FTZU, etc.) are accepted by all member states of the EU. The remaining members of CENELEC, Switzerland in particular, also accept the certificates. Tolerances for electrical data

Tolerances for electrical data

According to EN 60034, the following tolerances are permitted: Motors that comply with EN 60034-1 must have a voltage tolerance according to Area A (see diagram on page 1/27). If this is fully utilized, the admissible limit temperature of the temperature class may be exceeded by 10 K.

Efficiency η at
 $P_{\text{rated}} \leq 150 \text{ kW}$: $-0.15 \cdot (1 - \eta)$
 $P_{\text{rated}} > 150 \text{ kW}$: $-0.1 \cdot (1 - \eta)$

Where η is a decimal number.

Power factor $\cos \varphi$

- _ Minimum absolute value: 0.02
- _ Maximum absolute value: 0.07

Slip $\pm 20 \%$ (for motors $< 1 \text{ kW}$ $\pm 30 \%$ is admissible)
 Locked-rotor current $+20 \%$
 Locked-rotor torque -15% to $+25 \%$
 Breakdown torque -10%
 Moment of inertia $\pm 10 \%$

For more details, see section "Voltages, currents and frequencies" on page 1/27.

Certifications

Product certifications are differentiated in terms of safety-related certificates and efficiency certificates.

Since 2011, it has been obligatory for low-voltage motors with power ratings in the range of 0.75 to 375 kW (2-, 4-, and 6-pole) to be classified in accordance with the IEC 60034-30-1 efficiency standard and to be marked with the corresponding IE code (International Efficiency IE1, IE2, or IE3). The efficiency is determined using the summed losses method in accordance with IEC 60034-2-1.

Energy-saving motors for the European Economic Area in accordance with EU Regulation 640/2009 – valid until June 30, 2021 (from July 1, 2021, EU Regulation 2019/1781 comes into force)

Since January 2017, all low-voltage motors that fall within the scope of the EU Regulation must fulfill the specifications of international efficiency class IE3 or IE2.

- _ Line voltage $\leq 1000 \text{ V}$
- _ Line frequency 50 or 50/60 Hz and 60 Hz
- _ Power range 0.12 to 0.74 IE2
Power range 0.75 to 1000 kW IE3
Power range 75 to 200 kW IE4
- _ Pole number 2-, 4-, 6- and 8-pole
- _ Continuous duty S1, S3 $> 80 \%$ and S6 $> 80 \%$

OverviewEnergy-saving motors for the North-American economic area in accordance with EISA

In accordance with EISA, modified conditions have been in effect since June 1, 2016.

This law stipulates that all motors must comply with the requirements stated in NEMA MG1 Table 12-12 (NPE = Nema Premium Efficient). From this date onwards, therefore, motors previously covered by the EAct must also comply with NPE. The NPE requirements apply to motors with the following characteristics / operating conditions:

- _ Line voltage \leq 600 V
- _ Line frequency 60 Hz
- _ Power range 1 hp to 500 hp
- _ Number of poles: 2-, 4-, 6-, 8-pole motors and geared motors
- _ Continuous duty S1

Explosion-protected motors are also included.

Exclusions from the EISA efficiency requirements:

- _ Brake motors
- _ Converter motors

Note:

Order code **D30**: el. acc. to NEMA

Order code **D31**: UL version

Order code **D40**: CSA version

These options can be ordered for motors that are not subject to the EISA specifications (e.g. for use outside North America).

Options **D30**, **D31** and **D40** do not authorize operation within North America.

The logo NEMA Premium is a registered trademark. It is only permitted to be used by companies that voluntarily submit to the control of the NEMA organization.

Approval for the USA: UL safety and DoE listing

For the USA, the motor series with following motor types are listed and marked with the certification number **CC032A**:

- Fulfilling IE3 and NEMA Premium Efficiency MG1 Table 12-12
- _ GP/SD Eagle line (1LE1023/1LE1523)
 - _ GP/SD with Premium Insulation (1LE1083/1LE1583) plus option code **D41**
 - _ SD Add (1LE5533, 1LE5633)
 - _ SD Pro with Premium Insulation (1LE5583, 1LE5683)

Fulfilling IE4 and NEMA Premium Efficiency MG1 Table 12-12

- _ SD (1LE5504 SH280) plus option code **D41**
- _ SD Add (1LE5534, 1LE5634) frame size 315 to 450
- _ SD Pro with Premium Insulation (1LE5584)

Additional specifications to NEMA MG1: Nominal efficiency acc. to NEMA MG1 Table 12-12, design letter, code letter, CONT, CC No. CC 032A (Innomatics) and service factor SF 1.15.

The above mentioned motor series remain certified up to a rated voltage of 600 V from Underwriters Laboratories Inc. and are marked accordingly ("Recognition Mark" = R/C).

UL approval does not apply to motors for Zones 1, 2, 21, 22 or marine motors.

Approval for Canada: CSA safety and CSA Energy Efficiency Verification

In April 2012, the EISA requirements were implemented in Canada; in this case, all powers are subject to certification without the restrictions applicable to the NEMA frame sizes. The above mentioned motor series are certified for Canada through the Canadian Standard Association (CSA), listed by the Office of Energy Efficiency (OEE) and marked with both the CSA safety logo and the CSA efficiency label. These motors comply with the efficiency requirements of the new CSA standard C390-10. The efficiency is determined in the same manner as with IEC 60034-2-1. Order code **D40** does not authorize importing into Canada.

Externally or internally mounted components which are used are listed by CSA or are used by manufacturers in accordance with regulations. Suitability in the final application must be verified.

Approval does not apply to 1MB1 motors for Zones 1, 2, 21 and 22 or marine motors.

QPS Safety Certification Mark

The label of the accredited certification body cQPSus permits to use the equipment in the North American and Canada market.

The cQPSus Label demonstrates customer, distributors as well Regulatory Authorities Having Jurisdiction (AHJs) across the USA and Canada that the equipment has been tested, certified and complies the required North American safety standards and codes.

The equipment can be used in hazardous location according with the North American National Electrical Code (NEC) NEC 500, NEC 505 or NEC 506 and the Canadian Electrical Code (CEC) Article 18 und Annex J respectively to the marked Classification or Zone on the equipment.

Introduction

Versions in accordance with standards and specifications

Overview

NOM – Norma Oficial Mexicana

Motors which are delivered as stand-alone deliveries must comply with the standard NOM-016 ENER 2016 and be marked with the NOM logo. This is the responsibility of each importer and the certificate as such is the sole property of the importer and is not transferable

Korea certification – Order code **D33**

Minimum efficiencies required by law

According to a legislative amendment with reference to the MKE-2015-28 (Ministry of Knowledge Economy Korea) dated February 12, 2015, Minimum Efficiency IE3 became obligatory in Korea on the following dates:

- _ October 1, 2015 for motors ranging from 37 to 200 kW
- _ October 1, 2016 for motors ranging from 200 to 375 kW
- _ October 1, 2018 for motors ranging from 0.75 to 37 kW

For this reason, the Innomotics GP/SD APAC series (Asia/Pacific) with efficiency class IE3, which complies with the IE3 energy efficiency requirements for line frequencies 50 Hz and 60 Hz (P50), was launched onto the market:

- _ Innomotics GP, 2-, 4-, and 6-pole motors of the 1LE1043 motor series
- _ Innomotics SD, 2-, 4-, and 6-pole motors of the 1LE1543 and 1LE1643 motor series

Scope of Korean standard KS C 60034-2-1

This Korean standard is applicable to three-phase asynchronous motors with the following parameters:

- _ Voltage: ≤ 600 V
- _ Power supply: 60 Hz three-phase
- _ Rated power: 0.75 ... 375 kW
- _ Number of poles: 2, 4, 6 and 8
- _ Speed: Constant
- _ Coolant temperature: ≤ 40 °C
- _ Mounting method: Foot or flange-mounted

Korea Energy Label

Order code **D33** KEA (Korea Energy Agency KEA) Korea Energy Efficiency Label can be ordered only for those motors which comply with Korean efficiency requirements. Confirmation that the motor efficiency and power factor comply with KS C 60034-2-1 is provided by certification.

The Korea Energy Label includes the following information:

- _ Full-load efficiency
- _ Motor Type (MT)
- _ Rated output power
- _ No. of poles
- _ CO₂ emissions per hour
- _ Energy costs per annum

Rating plate

KEA-certified motors with order code **D33** are fitted with a modified rating plate that indicates the admissible minimum energy efficiency value (P50 for 60 Hz) in accordance with the Korean Energy Efficiency Ordinance with reference to Korean Standard KS C 60034-2-1.

The energy efficiency values stipulated by KS C 60034 are identical to the international efficiency values IE (IEC 60034-30).

V		Hz	A	kW	cos φ	NOM.EFF	1/min	IE-CL
400	Δ	50	275	160	0.87	95.8	1490	IE3
690	Y	50	16	160	0.87	95.8	1490	IE3
460	Δ	60	275	184	0.88	95.0	1788	IE2
460	Δ	60	240	160	0.87	96.2	1791	IE3

You will find a complete list of KEA-certified motors (APAC Line) on the selection tables in Chapter 2.

1PC3 motors: 1PC3 motors are also covered by certification provided that the electrical design complies with local requirements as stipulated in standard KS C 60034-2-1. Please contact QC for further clarification if required.

Motors from the APAC Line can be ordered with or without order code **D33** depending on the final destination region.

Overview

Energy-saving motors for China: China Energy Label

In 2012, the directive for the China Energy Label was redefined. Applicability was extended to explosion-protected motors.

- _ Line voltage ≤ 1000 V
- _ Line frequency 50 Hz
- _ Power range 0.75 kW to 375 kW
- _ Number of poles: 2-, 4-, 6-, 8-pole
- _ Continuous duty S1

The minimum requirements for the efficiency classes previously defined in the Chinese standard GB 18613-2012 were classified in the new standard GB 18613-2020 (Minimum Allowable Values of Energy Efficiency and Energy Efficiency Grades for Small and Medium Three-Phase Asynchronous Motors) in accordance with International Efficiency IE3-5.

IEC IE class	GB 18613-2020
IE5	Grade 1
IE4	Grade 2
IE3	Grade 3

The 1LE1/5 motor series for IE3 and IE4, plus order code **D34** were previously certified for China Energy Label 20124421.

CCC safety certification is also required for motors with lower powers.

CCC – China Compulsory Certification – Order code **D01**

Motors with small powers (small power motors) that are exported to China must be certified up to a rated power of:

- _ 2-pole: ≤ 2.2 kW
- _ 4-pole: ≤ 1.1 kW
- _ 6-pole: ≤ 0.75 kW
- _ 8-pole: ≤ 0.55 kW

Notes:

Chinese customs checks the need for certification of imported products by means of the commodity code.

The following do not need to be certified:

- _ Explosion-protected motors
- _ Multi-voltage motors
- _ Multi-speed motors with powers higher than those listed above
- _ Repair parts

UKCA – UK Conformity Assessed

The UKCA marking is the product marking used for products being placed on the market in Great Britain (England, Scotland and Wales). The UKCA marking applies to most products previously subject to the CE marking and it's mandatory for products which are placed on the market after 31st of December 2022. All 1LE motors have the UKCA marking as standard.

VIK version

VIK = German Association of the Energy and Power Supply Industry

- _ **VIK standard version** – 1LE1, 1LE5 + order code **C02**
"VIK" identification on rating plate.
? Product range in Catalog Section 2.
- _ **VIK-Ex ec version** – 1MB1.3, 1MB5.3 + order code **C02**
"VIK" and "Ex ec IIC T3 Gc" marking on the rating plate according to Directive 2014/34/EU (ATEX).
? Product range in catalog section 5.

Both versions include technology as for Zone 2 with type of protection Ex ec IIC T3 Gc.

Design features for VIK version:

- _ Rating plate made of stainless steel
- _ Fan cover made of sheet steel
- _ Vertical motors with protective cover (order code **H00** must be ordered)
- _ Terminal box for direct cable connection (as 1MB... series) and with silicone seal
- _ Certified connection system in the terminal box
- _ Terminal box with certified sealing plugs
- _ External grounding
- _ Painting according to corrosivity category C3
- _ Second rating plate supplied loose

Minimum efficiency class:

- _ VIK standard version:
IE3 or IE4 in accordance with legal specifications.
- _ VIK-Ex ec version:
IE3 in accordance with legal specifications.

Notes:

- _ Compliance with the VIK regulations is valid, taking into account the most recently published deviation list.
- _ Designs deviating from the requirements according to VIK - VE-01 2018, e.g., ambient temperature, winding temperature utilization, degree of protection, etc., are considered accepted deviations.
- _ For use in potentially explosive atmospheres (e.g., Zone 2), the motor must be marked according to ATEX and IEC/EN 60079 (e.g., Ex ec).
- _ The modular equipment (e.g., brake, encoder, forced ventilation) of a normal motor (e.g., 1LE...) does not meet the requirements for use in potentially explosive atmospheres.

Introduction

Versions in accordance with standards and specifications

Overview

TR CU product safety certificate EAC for the Eurasian Customs Union (Kazakhstan, Armenia, Kyrgyzstan without Russia and Belarus)

TR CU = Technical Regulation Customs Union

EAC = Eurasian Conformity

The TR CU product safety certificate is required in order to import motors into the Eurasian Customs Union area.

"TR CU product safety certificate EAC for Eurasian Customs Union" – order code **D47**

When motors are ordered with order code **D47**, the motor rating plate and packaging are marked with the logo "EAC".

The motor must have a "TR CU product safety certificate EAC", although the certificate does not generally have to be shipped with the motor. The customs authorities use the motor article number to check the motor certification.

The following are available in Innomotics Configurator configurator.innomotics.com

- _ TR CU product safety certificate in accordance with the Low-Voltage Directive
- _ Additional TR CU product certificate in accordance with the EMC Directive.

Train-compatible version

When ordering with order codes **L91** or **L92**, order code **B02** included.

Train-compatible version IC418, EN IEC 60349, acc. to EN 45545, without external fan and fan cover

(1LE10 aluminum motors in frame sizes 80 to 200) – Order code **L92** for cooling method IC418

- _ Electrical design in accordance with EN IEC 60349; $U_{rated} \leq 500$ V AC.
- _ DC-link voltage: $U_{dc} \leq 700$ V; $du/dt \leq 5$ kV/ μ s
- _ Vibration resistance to Class 3M4 according to IEC 60721-3-3
- _ Metal cable gland
- _ Including external grounding depending on construction type (corresponds to order code **H04**).
- _ Standard paint finish certified according to EN 45545 maximum coat thickness:

primer coat	80 μ m
top coat	80 μ m
- _ Polyurethane-based paint, order code **S06** maximum coat thickness:

primer coat	90 μ m
top coat	140 μ m

Train-compatible version IC411, EN IEC 60349, with EN 45545, with external fan and fan cover in metal – order code **L91** for cooling method IC411

- _ 1LE10 aluminum motors in frame sizes 80 to 200
- _ Electrical design in accordance with EN IEC 60349; $U_{rated} \leq 500$ V AC.
- _ DC-link voltage: $U_{dc} \leq 700$ V; $du/dt \leq 5$ kV/ μ s
- _ Vibration resistance to Class 3M4 according to IEC 60721-3-3
- _ Metal cable gland
- _ Including external grounding depending on construction type (corresponds to order code **H04**).
- _ Standard paint finish certified according to EN 45545 maximum coat thickness:

primer coat	80 μ m
top coat	80 μ m
- _ (Polyurethane-based paint, order code **S06** maximum coat thickness:

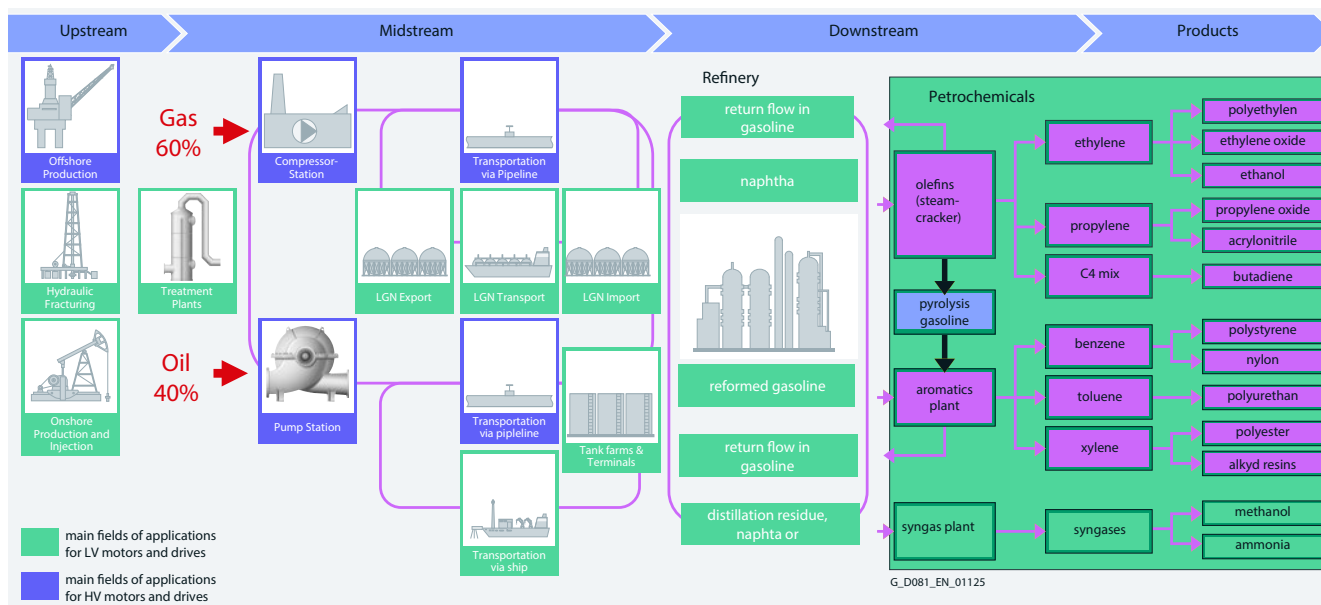

primer coat	90 μ m
top coat	140 μ m
- _ Including metal fan cover

Recommended supplementary options:

- _ Located bearing DE (order code **L20**)
- _ Temperature class 155 (F), utilized according to 130 (B), coolant temperature 55 C, derating approx. 13 % (order code **N07**)
- _ Coolant temperature -30 to +40 °C (order code **D04**)
- _ Coolant temperature -40 to +40 °C (order code **D03**)

Version with reduced silicone amount acc. to VDMA 24364-C1/T70

Motors equipped with order code **R77** have modified design to fulfill requirements on paint wetting impairment substances given by the classification C1/T70. Modification consists of special connection cables, sealings and protection products. Motors, equipped by the order code **R77** can be used in Zone II, which defines paintprocessing production area.

Overview**Innomotics XP CHEMSTAR & Innomotics SD CHEMSTAR -****The industry-specific motor solution for the Chemical, Petrochemical, and Oil & Gas sectors**

The proven industry-specific CHEMSTAR range has been setting standards for decades in terms of motor technology for the extreme operating conditions prevailing in the chemical industry as well as in the plants producing, transporting and processing oil and gas raw materials. The combination of these many years of experience and expertise on the one hand and the technology of the Innomotics motor platform on the other ensures maximum reliability, safety, high efficiency and simple project handling in these industries.

In the often complex processes and procedures of the chemical industry, many, though not all plant components are subject to explosion hazards due to flammable gases, liquids and dusts. The motor used must therefore function permanently and smoothly, even in chemically aggressive atmospheres.

The situation is similar in the application fields of the Oil & Gas sector. These are characterized by extreme demands placed on the drive technology used. This applies not only to the high explosion risk inherent in both commodities, but also to the place of deployment, whether it be offshore on the high seas, in the Arctic or in the Arabian desert.

With this in mind, we offer the explosion-protected Innomotics XP and Innomotics SD motors for harsh environments without the risk of explosion in the CHEMSTAR version. And this again in two industry-specific variants: One variant for the chemical industry and one for the Oil & Gas sector. The CHEMSTAR basic features are combined with chemical-specific or oil & gas-specific additional features

In the case of the "CHEMSTAR for Chemical Industry" variant, this ensures that the motor is precisely tailored to the specific ambient conditions of this industry, thus ensuring maximum reliability and safety in chemical processes.

With the "CHEMSTAR for Oil & Gas" version, the basic and additional features are combined in such a way that the motors ensure maximum safety and plant availability while simultaneously reducing lifecycle costs, even under the extreme conditions of oil and gas production and transport.

Introduction

Versions in accordance with standards and specifications

Overview

Innomotics motors for oil and gas applications in CHEMSTAR design meet the new standard of the IOGP specification.

1

The following overview shows the basic features and the industry-specific features of the two variants.

Variant	Chemicle industry	Oil & gas
Sector options	C03	C04
Options included in the package		
Paint system	C4 Special paint system "sea air resistant"	C2 Standard paint system Optionally special paint system up to category CX offshore
Plate material	Plates made of stainless steel QR code plate made of stainless steel	
Screws	Standard version	Stainless steel screws
Fan cover	Fan cover made of sheet steel	
Grounding	External grounding	
Housing	IP66 Increased air humidity 40-60 g per m ³ of air ¹⁾	
Condensation drainage holes	Sealed ²⁾	
Bearings	Bearings reinforced at both ends for DE and NDE, bearing size 63 from frame size 100	
Warranty	36 months from delivery	
Inspection certificate	Inspection certificate 3.1	
Included standard	VIK version	-
Recommended options		
Documentation	Documentation package "Advanced"	Documentation package "Projects"
Additional rating plate	Additional rating plate with customer specifications	

¹⁾ C04 in conjunction with corrosivity category C3 or higher

²⁾ Ex db motors without drainage holes

Overview**Voltages, currents and frequencies**Standard voltages

EN 60034-1 differentiates between Category A (combination of voltage deviation $\pm 5\%$ and frequency deviation $\pm 2\%$) and Category B (combination of voltage deviation $\pm 10\%$ and frequency deviation $+4/-6\%$) for voltage and frequency fluctuations. The motors can supply their rated torque in both Category A and Category B. In Category A, the temperature rise is approx. 10 K higher than during rated operation.

Standard	Category	Category
IEC 60034-1	A	B
Voltage deviation	$\pm 5\%$	$\pm 10\%$
Frequency deviation	$\pm 2\%$	$+4\%/-6\%$
Rating plate data stamped with rated voltage a (e.g. a=400 V)	a $\pm 5\%$ (e.g. 400 V $\pm 5\%$)	a $\pm 10\%$ (e.g. 400 $\pm 10\%$)
Rating plate data stamped with rated voltage ranges b to c (e.g. b=380 V to c=420 V)	b -5% to c $+5\%$ (e.g. 380 -5% to 420 $+5\%$)	b -10% to c $+10\%$ (e.g. 380 -10% to 420 $+10\%$)

For further details, see EN 60034-1.

According to the standard, longer operation is not recommended for Category B. See "Rating plates and additional rating plates" for details of the rating plate inscriptions and corresponding examples. The selection and ordering data give the rated current at 460 V, 60 Hz. The IEC 60038 standard specifies a tolerance of $\pm 10\%$ for line voltages of 230 V, 400 V, and 690 V.

Line voltages	Voltage code
1LE1 motors	
230 V Δ /400 VY, 50 Hz	22
460 VY, 60 Hz	
400 V Δ /690 VY, 50 Hz	34
460 V Δ , 60 Hz	
500 VY, 50 Hz	27
575 VY, 60 Hz	
500 V Δ , 50 Hz	40
575 V $\Delta\Delta$ 60 Hz	

Non-standard voltages and/or frequencies

The tolerance laid down by EN 60034-1 applies to all non-standard voltages.

For some non-standard voltages at 50 or 60 Hz, order codes are specified. They are ordered by specifying the code digit **9** for voltage in the 12th position of the Article No. as well as the code digit **0** in the 13th position of the Article No. and the corresponding order code.

The lowest rated voltage for **M1Y** that can be delivered depends on factors including the circuit (delta connection 200 V/star (wye) connection 250 V) and frame size. The defined order codes for further rated voltages provide an indication of the lowest rated voltage for **M1Y**.

Order codes for other rated voltages are listed under "Order suffixes" in the "Selection and ordering data" as well as "Special versions" under "Voltages".

Line voltages according to NEMA

Assignment of rated voltage of the motor to that of the line:

Line voltage	Motor voltage
208 V	200 V
240 V	230 V
480 V	460 V
600 V	575 V

Y-axis: Voltage tolerance
X-axis: Frequency tolerance

Powers

The powers or rated powers are listed in the selection tables for both 50 Hz and 60 Hz. For 60 Hz, the rated power values must, in some cases, be increased, e.g. for pole-changing motors.

Assignment of standard powers kW-hp in accordance with IEC 60072-1

The values specified for kW and hp are not precise conversion values. They are the approximate relationship between the values generally applied in the countries in which both units are used.

P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp	P_{rated} kW	P_{rated} hp

Introduction

Rating plate and additional rating plates

Overview

In accordance with EN 60034-1, the approximate total weight is specified on the rating plate for all motors.

1

Supplementary data (maximum of 20 characters) can be indicated on the rating plate or additional rating plate and on the packaging label.

Order code **Y84**

An additional rating plate for customer specifications is also possible, additional text: 9 lines of 40 characters each.

Order code **Y82**

An adhesive label can also be supplied loose.

Order code **Y85**

An additional rating plate for customer specifications is also possible, additional text: 9 lines of 40 characters each.

Order code **Y82**

An additional rating plate with deviating rating plate data can also be ordered (only for ratings such as voltage, power, speed).

Order code **Y80**.

An "additional rating plate for voltage tolerance" can also be ordered.

Can be ordered for 230 VΔ/400 VY or 400 VΔ/690 VY (voltage code "22" or "34"). Not possible for pole-changing motors, naturally cooled 1PC1 motors and in combination with order code **D34**.

Order code **B07**

(voltage range plate is always provided in the form of an adhesive label)

The number of rating plates and/or the material quality of the rating plate including additional rating plates can be ordered using order codes **Y82**, **Y84** and **Y80**. Does not apply to order code **B07**, rotational direction arrows, PTC thermistor plates, other notices.

_ Extra (rating) plate(s) –

Order code **M10**

As adhesive label for frame sizes 80 and 90.

_ Plate(s) with resistance to scratches, heat, cold and acid –

Order code **M11**

As standard, the normal version of the rating plate is international (in English).

Other languages on request.

Explanation of the standard rating plate

Introduction

Efficiency, power factor, rated power, direction of rotation, rated torque

Overview

Efficiency and power factor

The efficiency η for 4/4, 3/4 and 1/2 load and the power factor $\cos \varphi$ for each rated power are listed in the selection tables in the individual sections of this catalog.

See page 1/5 for minimum efficiencies.

Rated speed and direction of rotation

The rated speeds are applicable for the rated data.

The synchronous speed changes proportionally with the line frequency. The motors are suitable for clockwise and counterclockwise rotation.

When U1, V1, W1 are connected to L1, L2, L3 the motor rotates clockwise when viewing the drive shaft extension. Counterclockwise rotation is achieved by swapping two phases (see also "Heating and ventilation" on page 1/37).

Rated torque

The rated torque T in Nm delivered at the motor shaft is

$$T = \frac{9.55 \cdot P \cdot 1000}{n}$$

P Rated power in kW

n Speed in rpm

Note:

If the voltage deviates from its rated value within the admissible limits, the locked-rotor torque, the pull-up torque and the breakdown torque vary with the approximate square of the value, but the locked-rotor current varies approximately linearly.

In the case of squirrel-cage motors, the locked-rotor torque and breakdown torque are listed in the selection tables as multiples of the rated torque.

Preferred practice is to start squirrel-cage motors directly on line. The torque class indicates that with direct-on-line starting, even if there is an undervoltage of -5 %, it is possible to start up the motor against a load torque of

- _ 160 % for CL 16
- _ 130 % for CL 13
- _ 100 % for CL 10
- _ 70 % for CL 7
- _ 50 % for CL 5

of the rated torque.

Overview

All motors in the Innomotics generation are equipped with innovative insulation systems, consisting of high-quality enamel wires and insulating sheet materials in conjunction with highly temperature-resistant impregnations.

The motors can be operated with SINAMICS G and SINAMICS S converters (controlled and uncontrolled infeed) while adhering to the admissible voltage peaks in accordance with the adjacent table.

Continuous operation while fully utilizing the admissible voltage tolerances must be avoided and is not recommended in accordance with IEC 60034-1 2011 Chapter 7.3.

The preferred supply system configurations are TT systems and TN systems with neutral-point grounding. We do not recommend operation in TN systems because of the higher voltage load.

Operation on non-grounded IT systems is also possible. However, in a ground fault, the insulation is excessively stressed. In the case of a ground fault, the process should be terminated as quickly as possible ($t < 2$ h), and the fault resolved.

For motors with protruding connection cables (order codes **R20, R21, R22, R23, and R24**), please inquire in the case of converter operation.

Impulse Voltage Insulation Class (IVIC) – category C (strong)

The insulation system of Innomotics motors significantly exceeds the requirements of stress category C (IVIC C = high stress). If voltage peaks higher than those specified according to IVIC C can occur, observe the data in the following table.

- _ For a line voltage (converter input voltage) up to 500 V and operation connected to a SINAMICS G/SINAMICS S converter with uncontrolled infeed (BLM, SLM), the relevant guidelines for the motor and converter configuration must be observed.
- _ For a line voltage (converter input voltage) up to max. 480 V and operation connected to a SINAMICS S converter with controlled infeed (ALM), the relevant guidelines for the motor and converter configuration must be observed.
- _ For line voltages (converter input voltages) higher than those stated above (max. 690 V), motors that are ordered for converter operation must have a suitable insulation system.
- _ For operation of a converter of another manufacturer, the permissible voltage peaks according to IEC 60034-18-41 in accordance with stress category C (see table below) must be observed, depending on the particular line voltage (converter input voltage) and the motor insulation system.

		Line voltage U_{rated}						
		400 V		480 V		500 V		
Standard		IVIC C	Inno- motics	IVIC C	Inno- motics	IVIC C	Inno- motics ¹⁾	
U_{phase}	$U_{phase-to-ground}$	$V_{pk/pk}$	1664	2200	1997	2200	2080	2800
$\dot{U}_{phase-to-ground}$		V_{pk}	832	1100	999	1100	1040	1400
U_{phase}	$U_{phase-to-phase}$	$V_{pk/pk}$	2377	3000	2852	3000	2971	3200
$\dot{U}_{phase-to-phase}$		V_{pk}	1189	1500	1426	1500	1486	1600

		Line voltage U_{rated}				
		500 V		690 V		
PREMIUM		IVIC C	Inno- motics	IVIV C	Inno- motics	
U_{phase}	$U_{phase-to-ground}$	$V_{pk/pk}$	2080	3000	2870	3000
$\dot{U}_{phase-to-ground}$		V_{pk}	1040	1500	1435	1500
U_{phase}	$U_{phase-to-phase}$	$V_{pk/pk}$	2971	4400	4100	4400
$\dot{U}_{phase-to-phase}$		V_{pk}	1486	2200	2050	2200

Minimal to IEC60034-18 0.1 μ s (0.3+/-0.2).

The voltages according to EN 60034-18-41/IVIC C are specified as peak-to-peak values ($V_{pk/pk}$). For information, the conventional peak values (V_{pk}) are also stated.

Insulation systems for converter operation > 480 V/500 V

The Innomotics motors can be operated in their standard version on SINAMICS converters without an additional filter up to a maximum converter input voltage of 500 V 3 AC on uncontrolled infeeds (SINAMICS G/S/V, BLM/SLM) and up to 480 V 3 AC on controlled infeeds (SINAMICS S, ALM). The specific configuration guidelines for motors and converters must be observed.

For higher converter input voltages, > 480 V/500 V 3 AC (max. 690 V), a special insulation system of the motor (PREMIUM) is required.

This is available for converter motors, such as Innomotics GP/SD VSD10, Innomotics DP crane motors, Innomotics FD, and the converter-capable Innomotics SD Pro motors.

For IE3 standard motors, the PREMIUM insulation system is available depending on the type.

¹⁾ Only for motors with voltage code 27 or 40.

Introduction

Converter operation

Overview

Bearing insulation/shaft grounding brushes

To avoid damage to bearings due to bearing currents, we recommend bearing insulation at the non-drive end (NDE) for frame size 225 and larger (order code **L51**).

For converter operation and for frame size 315 and larger, bearing insulation at the non-drive end (NDE) is always provided (order code **L51**).

When rotary encoders are used, it must be ensured that these do not bypass the bearing insulation. The rotary encoders in this catalog meet this requirement except for type 1XP8.

In most cases, NDE bearing insulation provides sufficient protection against damage to bearings due to bearing currents.

In rare cases, depending on the application and system, it may be necessary to take further measures on the converter or motor. On the motor side, bearing insulation is provided on the drive end (DE) (order code **L50** on frame size 225 and larger) and shaft grounding brushes (order code **L52** as of frame size 280).

When NDE bearing insulation is used together with DE bearing insulation, the "shaft grounding brush" option (order code **L52**) must also be selected to maintain the shaft at a defined potential. In this constellation, to avoid damage to the bearings of the driven machine due to bearing currents, it is also necessary to insulate the coupling between the motor and the driven machine.

When DE or NDE bearing insulation (order codes **L50** or **L51**) is used together with shaft grounding brushes (order code **L52**), care must be taken - to avoid damage to the bearings of the driven machine - that the shaft grounding brushes are **not** mounted on the same side as the insulated bearing.

The EMC guidelines must always be complied with when the drive system is installed.

Thermal utilization of the motor

When motors are operated on a converter, additional losses occur due to the harmonics in the motor currents, which, depending on the permissible winding temperature, can make it necessary to reduce the torque. For operation on SINAMICS converters, the permissible torque values can be obtained from the SIZER engineering tool.

For operation on SINAMICS converters with the power ratings specified in the catalog, the motors are used according to temperature class 155 (F), i.e. in this case neither a service factor > 1 nor an increased coolant temperature is possible (order codes **N01**, **N02** and **N03** cannot be ordered).

Overview**Explosion-protected motors**

For converter operation of Ex motors, special measures must be considered, see Chapter 5.

DURIGNIT IR 2000 insulation system

The DURIGNIT IR 2000 insulation system consists of high-quality enamel wires and insulating sheet materials in conjunction with temperature-resistant resin impregnation. This ensures that these motors will have a high mechanical and electrical strength, high service value, and a long lifetime. The insulation system protects the winding to a large degree against aggressive gases, vapors, dusts, oils and increased air humidity. It can withstand the usual vibration stressing. The insulation is suitable up to an absolute air humidity of 30 g water per m³ of air. Moisture condensation should be prevented from forming on the winding. For higher values, the **N30** and **N31** options are available – see page 1/35.

Please inquire about extreme applications.

Restarting against residual field and opposite phase

All motors can be restarted against 100 % residual field after a line voltage failure.

Winding and insulation version with regard to temperature class

At rated power in line operation, the 1LE5/1MB5 motor series can be utilized in the following temperature class:

- _ For Innomotics SD Add ¹⁾: Temperature class 130 (B)
- _ For Innomotics XP ¹⁾: Temperature class 130 (B)
- _ For Innomotics SD Pro and Innomotics XP 1MB58: Temperature class 155 (F)

All motors are designed with temperature class 155 (F). For details of derating for utilization in temperature class 155 (F), see "DURIGNIT IR 2000 insulation system".

Temperature class 155 (F), utilized according to 155 (F), with service factor (SF)

According to the selection table, at rated power and rated voltage, all 1LE./1PC1 motors in line operation have a service factor of 1.15. An exception are IE1 motors, which have a service factor of 1.1.

For the line operation, all motors with frame sizes 400 and 450 have a service factor of 1.05 at rated power.

Order code **N01**

Temperature class 155 (F), utilized according to 155 (F), for higher power

When utilized according to temperature class 155 (F), the rated power specified in the selection and ordering data can be increased by 15 %. Exception for IE1 motors – can be increased by 10 %. For motors of frame sizes 400 and 450, for line operation, when utilized according to temperature class 155 (F), the rated power listed in the selection and ordering data can be increased by 5 %. In this case, the service factor is 1.0. Order code **N02**

Temperature class 155 (F), utilized acc. to 155 (F), with increased coolant temperature

With power as defined in the catalog and line operation, the coolant temperature is permitted to rise to 55 °C and, for motors of frame sizes 400 and 450, to 45 °C.

In this case, the service factor is 1.0.

Order code **N03**

The service factor (SF) is not indicated on the rating plate for order codes **N02** and **N03**.

For converter operation at the power specified in the catalog, the motors are utilized according to temperature class 155 (F). Order codes **N01**, **N02**, and **N03** are not possible.

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 45 °C, derating approx. 4 %

For motor series 1LE1, 1MB. ¹⁾, Innomotics SD Add ¹⁾, a version can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 45 °C with derating of 4 %.

Order code **N05**

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 50 °C, derating approx. 8 %

For motor series 1LE1, 1MB. ¹⁾, Innomotics SD Add ¹⁾ a version can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 50 °C with derating of 8 %.

Order code **N06**

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 55 °C, derating approx. 13 %

For motor series 1LE1, 1MB. ¹⁾, Innomotics SD Add ¹⁾ a version can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 55 °C with derating of 13 %.

Order code **N07**

Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 60 °C, derating approx. 18 %

For motor series 1LE1, 1MB. ¹⁾, Innomotics SD Add ¹⁾ a version can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) and a maximum coolant temperature of 60 °C with derating of 18 %.

Order code **N08**

Temperature class 180 (H)

Order code **N10** ²⁾

Order code **N10** provides an insulation system corresponding to temperature class 180 (H).

Order code **N10** does not change power and utilization of motor.

¹⁾ Not applicable for 8-pole motors, frame size 450. Utilization in accordance with temperature class 130 (B) only possible on request, specifying order code **Y50**.

²⁾ Order code for Ex motors of the 1MB5, Innomotics XP motor series not available.

Introduction

Windings and insulation

Overview

Temperature class 180 (H) at rated power and max. CT 60 °C

Order code **N11**

Order code **N11** provides an insulation system corresponding to the temperature class 180 (H) for a coolant temperature of 60 °C with rated power.

Utilization according to temperature class can be changed.

For motors of frame sizes 225 to 355, utilization according to H/H is not permissible due to the bearing temperature rise.

In this case, the service factor is 1.0.

The grease lifetime specified is valid for a coolant temperature of 40 °C. If the coolant temperature is increased by 10 K, the grease lifetime and regreasing interval are halved.

Temperature class 155 (F), utilized acc. to 130 (B), with higher coolant temperature and/or installation altitude

The motors can be ordered according to temperature class 155 (F) for utilization according to temperature class 130 (B) with other customized requirements if they are specified in plain text in the order.

Order code **Y50**

Temperature class 155 (F), utilized according to 155 (F), other requirements

The motors can be ordered according to temperature class 155 (F) for utilization according to temperature class 155 (F) with other customized requirements if they are specified in plain text in the order.

Order code **Y52**

Temperature class 180 (H), utilized according to 155 (F)

The motors can be ordered according to temperature class 180 (H) for utilization according to temperature class 155 (F) with other customized requirements if they are specified in plain text in the order.

Order code **Y75**¹⁾

Increased air humidity/temperature with 30 to 60 g water per m³ of air

With motor series 1LE1, 1LE5, 1MB1, 1MB5 and 1PC1, motors are available in a version designed for increased air humidity in the range of 30 to 60 g water per m³ of air, depending on the temperature, as shown in the table below. This version has condensation drainage holes (sealed). Not possible for 1MB..5 Ex db motors.

Order code **N30** (includes order code **H03**²⁾, **M11**, stainless bolts in the terminal box cover, and **S02** standard/special paint finish for Performance Line cast-iron motors).

Please inquire before combining order code **N30** with mountings (e.g. rotary pulse encoder, brakes)!

Increased air humidity/temperature with over 60 to 100 g water per m³ air

With motor series 1LE1, 1LE5, 1MB1, 1MB5 and 1PC1, motors are available in a version designed for increased air humidity of over 60 to 100 g water per m³ of air, depending on the temperature, as shown in the table below. This version has condensation drainage holes. Not possible for 1MB..5 Ex db motors.

Order code **N31** (includes order code **H03**²⁾, **M11**, stainless bolts in the terminal box cover, and either the **S02** special paint finish or the **S03** "sea air resistant" special paint finish for Performance Line cast-iron motors).

Please inquire before combining order code **N31** with mountings (e.g. rotary pulse encoder, brakes)!

¹⁾ Order code for Ex motors of the 1MB5, Innomatics XP motor series not available.

²⁾ Order code for Ex motors of the 1MB.553, Innomatics XP motor series not available.

Overview**Absolute/relative conversion of air humidity**

Relative humidity	Temperature							
	up to 20 °C	up to 30 °C	up to 40 °C	up to 50 °C	up to 60 °C	up to 70 °C	up to 80 °C	up to 90 °C
10 %	2	3	5	8	13	20	29	42
15 %	3	5	8	12	19	30	44	63
20 %	3	6	10	17	26	39	58	84
25 %	4	8	13	21	32	49	73	105
30 %	5	9	15	25	39	59	87	126
35 %	6	11	18	29	45	69	102	146
40 %	7	12	20	33	52	79	116	167
45 %	8	14	23	37	58	89	131	188
50 %	9	15	26	41	65	98	145	209

60 %	10	19	31	50	78	118	174	251
65 %	11	20	33	54	84	128	189	272
70 %	12	21	36	58	91	138	203	293
75 %	13	23	38	62	97	148	218	314
80 %	14	24	41	66	104	157	233	335
85 %	15	26	43	70	110	167	247	356
90 %	16	27	46	74	117	177	262	377
95 %	16	29	49	79	123	187	276	398
100 %	17	30	51	83	130	197	291	419

The values in the table with a light gray background are covered by the standard version (up to < 30 g water per m³ of air).

The values in the table with a medium gray background are covered by order code **N30** (30 to < 60 g of water per m³ of air).

The values in the table with a dark gray background are covered by order code **N31** (60 to < 100 g of water per m³ of air).

Note:

- _ The coolant temperature and installation altitude can be found from page 1/36 onwards!
- _ The sheet metal fan cover is available in combination with order code **F74** (not standard).
For details of order code **F74** – see page 1/38
- _ In case of increased thermal stress, please combine with the order codes **N05** to **N08**.
- _ In conjunction with more stringent requirements for the paint finish or corrosion protection stress (offshore, sea air, etc.), the corresponding order codes **S02**, **S03**, **S04**, and potentially **H07**, must be combined!
- _ Order code **N31** requires additional specifications for the ambient temperature CT 50 °C to CT 90 °C.

Introduction

Coolant temperature and installation altitude

Overview

The specified rated power is applicable for continuous duty in accordance with IEC 60034-1 at the frequency of 50 Hz, a coolant temperature (CT) or ambient temperature of 40 °C and an installation altitude (IA) up to 1000 m above sea level. 1LE1, 1LE5, 1MB1, 1MB5 and 1PC1 motors for ambient temperatures exceeding 40 °C are equipped with various types of seal. Mountings such as brake, terminal box at NDE, flange-mounted motors can sometimes exceed utilization in accordance with temperature class 130 (B).

For higher coolant temperatures and/or installation altitudes greater than 1000 m above sea level, the specified motor power must be reduced using the factor k_{HT} .

Depending on the frame size of the motor or the number of poles, special windings may be added to the motors for the different operating conditions.

This results in an admissible motor power of:

$$P_{adm} = P_{rated} \cdot k_{HT}$$

If the admissible motor power is no longer adequate for the drive, it should be checked whether the motor with the next highest rated power fulfills the requirements.

Abbreviation	Description	Unit
P_{adm}	Admissible motor power	kW
P_{rated}	Rated power	kW
k_{HT}	Factor for abnormal coolant temperature and/or installation altitude	

The motors are designed for temperature class 155 (F) and utilized in temperature class 130 (B). Under non-standard operating conditions, if they are to be used in this class, the admissible power rating must be determined from the table below.

Reduction factor k_{HT} for different installation altitudes and/or coolant temperatures

Installation altitude above sea level m	Coolant temperature					
	< 30 °C	30 ... 40 °C	45 °C	50 °C	55 °C	60 °C
1000	1.07	1.00	0.96	0.92	0.87	0.82
1500	1.04	0.97	0.93	0.89	0.84	0.79
2000	1.00	0.94	0.90	0.86	0.82	0.77
2500	0.96	0.90	0.86	0.83	0.78	0.74
3000	0.92	0.86	0.82	0.79	0.75	0.70
3500	0.88	0.82	0.79	0.75	0.71	0.67
4000	0.82	0.77	0.74	0.71	0.67	0.63

Coolant temperature and installation altitude are rounded to 5 °C and 500 m respectively.

Motors for coolant temperatures other than 40 °C or installation altitudes higher than 1000 m above sea level for utilization in temperature class 130 (B) must always be ordered with the additional identification code "-Z" and plain text. In the case of extreme derating, the operating data for the motors, i.e. efficiency and power factor, will also be less favorable due to partial utilization.

The following special versions are possible for 1LE1 and 1PC1 motors:

- _ Motors for coolant temperatures from -40 to +40 °C
order code **D03**
- _ Motors for coolant temperatures from -30 to +40 °C
order code **D04**

When ordering with order codes **D03** or **D04** in combination with mountings, the respective technical specifications have to be observed and it is necessary to inquire.

For details of order codes for use in temperature class 155 (F), see "DURIGNIT IR 2000 insulation system" under "Windings and insulation" on page 1/33.

Ambient temperature:

All motors can be used in the standard version at ambient temperatures between -20 and +40 °C. Exposure to direct sunlight can result in uncontrollable rises in motor temperature. To prevent this, appropriate shading measures

such as a sun-protective cover are recommended.

Motors can be utilized in temperature class 155 (F)

- _ at 40 °C with service factor 1.1, i.e. the motor can be continuously overloaded with 10 % of the rated power in the case of IE1 motors
- _ at 40 °C with service factor 1.15, i.e. the motor can be continuously overloaded with 15 % of the rated power in the case of IE2 motors and higher efficiency classes
- _ above 40 °C at rated power.
- _ 1LE5 motors are used in accordance with temperature class 155 (F) up to 40 °C occurs with a service factor of 1.05, i.e. the motor can be continuously overloaded with 5 % of the rated power.

When motors are used in temperature class 130 (B) for higher ambient temperatures and/or installation altitudes, derating occurs in accordance with the Table "Reduction factor k_{HT} for different installation altitudes and/or coolant temperatures". For motors ex stock, the service factor is indicated on the rating plate.

For other temperatures, special measures are necessary. When brakes are to be mounted on motors intended for operation at temperatures below freezing, please inquire.

Overview

Anti-condensation heating

Supply voltage 230 V (1AC)

Order code **Q02**

Supply voltage 115 V (1AC)

Order code **Q03**

Supply voltage 400 V (1AC)

Order code **Q06**

For motors with windings at risk of condensation due to the climatic conditions, e.g. inactive motors in humid atmospheres or motors that are subjected to widely fluctuating temperatures, anti-condensation heaters must be used.

An additional cable entry is provided for the connecting cable in the terminal box.

Motor series	Frame size	Cable entry
Aluminum motors (GP; XP)	≤ 200	1 × M16 × 1.5
Cast-iron motors (SD; XP)	≤ 180	1 × M16 × 1.5
	200	1 × M20 × 1.5
	225 ... 315	2 × M20 × 1.5
	355 ... 450	2 × M20 × 1.5

Anti-condensation heating must not be switched on during operation.

Frame size	Heat power of the anti-condensation heating		
	Supply voltage at		
	230 V	115 V (110 V)	400 V (1AC)
	Order code Q02	Order code Q03	Order code Q06
	W	W	W
1LE1/1LE5/1PC1 motors			
63 ... 80	12.5	12.5	-
90 ... 112	25	25	-
132 ... 200	50	50	-
225 ... 250	92	92	-
280 ... 315	109	109	-
315 ... 355	218	218	200
400 ... 450	240	240	370
1MB1, 1MB5 motors			
80 ... 112	7	7	-
132 ... 160	12	12	-
180 ... 200	57	57	-
225 ... 250	92	92	-
280 ... 315	109	109	-
355	218	218	200
400 ... 450	240	240	370

Instead of an anti-condensation heater, another possibility is to connect a voltage that is approximately 4 to 10 % of the rated motor voltage to stator terminals U1 and V1; 20 to 30 % of rated motor current is sufficient to heat the motor.

Fans/separately driven fans

1LE1 and 1MB1 motors of frame size 71 to 315 and 1LE5 and 1MB5 motors with 4 poles or more have radial-flow fans in the standard version (with the exception of order code **F90** – version "Forced-air cooled motors without external fan and fan cover") that cool regardless of the direction of rotation of the motor (cooling method IC411 acc. to EN 60034-6). In the standard version, 1LE5 motors with 2 poles are cooled with unidirectional axial-flow fans. The air flow is forced from the non-drive-end (NDE) to the drive end (DE).

For details of separately driven fans for frame size 63 to 450, see also "Separately driven fans" on page 1/96.

Supply voltage of separately driven fan for 1LE1 motors: The supply voltage tolerance of the separately driven fan is ±5 %. For voltage ranges, see page 1/96.

In confined spaces, it must be ensured that the minimum spacing is maintained between the fan cover and the wall. This also applies to adjacent parts, such as large handwheels and flywheels on the second shaft extension.

Clearance from wall/fan grilles

Frame size	mm
63, 71	15
80, 90, 100	20
112	25
132	30

	355 Extended power		Basic Line		
			Performance Line		
1LE55	400 ... 450 2-pollig	only for 2-pole		Metal	Metal
	400 ... 450 4-... 8-pollig	only for 4-... 8-pole		Plastic	
1LE56	315 ... 355			Metal	Metal

¹⁾ For the frame size codes **A, D, F, H, J, K, L, N, T, U**, and **V**, a screwed-on cover (plastic or metal) is used in conjunction with the order code **H03** (condensation drainage holes). Mounted separately driven fans or brakes are only available in sheet metal version.

Introduction

Heating and ventilation

Overview

Metal external fan impeller

The standard fan impeller made of plastic can be replaced with a fan impeller made of metal. This version is available for the motors (with the exception of 1LE1 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover").

In versions with a unidirectional axial-flow fan, the metal external fan is already included. Up to frame size 160 and for the 1LE5/1MB5 motor series, the metal external fan impeller is made of aluminum.

Order code **F76**

Fan cover for textile industry

For 1LE1 motors (with the exception of 1LE1 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover") the standard version of the fan cover cannot be used in the textile industry.

For the motor series 1LE1 (with the exception of 1LE1 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover") a special version of the fan cover is available for the textile industry. This has a protective cover and is made of non-corrosive sheet steel. The motor length increases when the fan cover for the textile industry is mounted, see page 1/135, Figure 12.

Order code **F75**.

The special requirements of the textile industry regarding the sheet metal cover open up the possibility that a finger may be inserted between the cover and housing. The customer must implement appropriate measures to ensure that the installed system is "finger-safe".

Sheet metal fan cover

In place of the plastic fan cover, a sheet metal fan cover can be ordered for motor series 1LE1 and 1LE5 (not in combination with order code **F90** – version "Forced-air cooled motors without external fan and fan cover").

Order code **F74**

The sheet metal fan cover is supplied as standard for

- _ Cast-iron series Performance Line (1LE16, 1LE56, 1LE55 with order code **C06**)
- _ Cast-iron series 1LE5 frame size 355, 400 and 450
- _ Explosion-protected 1MB1 and 1MB5 motors

Necessary minimum cooling air flow for forced-air cooled motors in standard duty

The cooling air flow specified in the selection table applies to continuous duty according to EN 60034-1 at a coolant temperature (CT) or ambient temperature of 40 °C respectively and an installation altitude (IA) up to 1000 m above sea level.

In the 1LE1/1LE5 motor version without external fan and fan cover, order code **F90**, the motor is located in the air flow of the driven fan that must drive the minimum cooling air flow over the motor housing. The minimum air flow must pass closely over the housing (comparable to self-ventilation of the motor). Otherwise higher air flows are required to comply with admissible motor heating levels.

Introduction

Motor protection

Overview

The order variants for motor protection are coded with letters in the 15th position of the Article No. and, if necessary, using order codes.

In the standard version, the motor is designed without motor protection.
15th position of the Article No. letter **A**.

A distinction is made between current-dependent and motor-temperature-dependent protection devices.

The following applies to all motors:

The motors can withstand 1.5 times the rated current at rated voltage and frequency for two minutes (EN 60034).

Note:

Insulation of winding components

All sensors for winding protection, which can be selected under the Article No. supplements and options for motor protection meet the requirements of basic insulation. The basic insulation is tested in accordance with Innomatics Product Standard 60034-1 and 60034-18-41 and relates to all sensors and built-in components that are installed in the winding, such as PTC, NTC, Pt100 and bimetal switch.

For example, by ordering with letter **B** in the 15th position of the Article No or as an option with order code **Q11** "1 or 3 PTC thermistors – for tripping".

The Pt100/1000 already meets the requirements for electrically protective separation according to IEC 61800-5-1.

For PTC elements, a request via quotation center is required after secure separation

Current dependent protection devices

Fuses are only used to protect power cables in the event of a short-circuit. They are not suitable for overload protection of the motor.

The motors are usually protected by thermally delayed overload protection devices (circuit breakers for motor protection or overload relays), e.g. with SIRIUS industrial controls and protection relays. For further details, see Catalog IC 10.

This protection is current-dependent and is particularly effective in the case of a locked rotor.

For standard duty with short start-up times and starting currents not too excessive and for low numbers of switching operations, motor protection switches provide adequate protection. Motor protection switches are not suitable for heavy starting duty or large numbers of switching operations. Differences in the thermal time constants for the protection equipment and the motor result in unnecessary early tripping when the protection switch is set to rated current.

Motor-temperature-dependent protective devices and motor temperature detection with converter operation

Depending on the specific requirements, various different components can be built into the motor winding for switching off the motor before it overheats and for monitoring the winding temperature and motor temperature.

Temperature detectors – Bimetal switches

Bimetal switches operate on the principle of mechanical deformation as a result of long-term heating. Bimetal strips bent as a result of such heating have a spring action that results in sudden reversal of the curvature (concave to convex or vice-versa).

When a limit temperature is reached, these temperature detectors (NC contacts) can deactivate an auxiliary circuit. The circuit can only be reclosed following a considerable fall in temperature. Bimetal switches are suitable protection devices in the case of slowly rising motor temperatures. When the motor current rises quickly (e.g. with a locked rotor), these switches are not suitable due to their large thermal time constants.

Temperature detectors for tripping:

15th position of the Article No. letter **Z** and order code **Q3A**.

The temperature detectors have the following current-carrying capacity and switching capacity:

230 V, AC: 2.5 A

24 V, DC: 1.6 A

PTC thermistors – Thermistor motor protection

PTC thermistors provide the most comprehensive protection against thermal overloading of the motor. A rise in the winding temperature over the admissible value can be accurately detected thanks to the low heat capacity of these PTC (Positive Temperature Coefficient) thermistors and their excellent heat contact with the winding. When the limit temperature is reached (rated tripping temperature), the PTC thermistors undergo a sudden change in resistance. This is evaluated by tripping units and can be used to open auxiliary circuits. PTC thermistors cannot themselves be subjected to high currents and voltages. This results in the destruction of the semiconductor. The switching hysteresis of the PTC thermistor and tripping unit is low, which supports fast restarting of the drive. Motor protection of this type is recommended for heavy duty starting, switching duty, extreme changes in load, high ambient temperatures or fluctuating supply systems.

Motor protection with PTC thermistor for tripping.
In the terminal box, two auxiliary terminals are required.
15th position of the Article No. letter **B**.

Two temperature sensor circuits are used if a warning is required before the motor is shut down (tripped). The warning is normally set to 10 K below the tripping temperature.

Motor protection with PTC thermistor for alarm and tripping.
In the terminal box, 4 auxiliary terminals are required.
15th position of the Article No. letter **C**.

The following applies to 1LE1 motors:

Motor protection for frame sizes 80 and 90 is implemented with the 15th position of the Article No. letter **B**, and with the order code **Q11** with a PTC thermistor.

Motor protection for frame sizes 80 and 90 is implemented with the 15th position of the Article No. letter **C**, and with the order code **Q12** with two PTC thermistors.

Overview

The following applies to 1MB1 motors:

The motor protection is implemented with the 15th position of the Article No. letter **B** with three PTC thermistors.

The motor protection is implemented with the 15th position of the Article No. letter **C** with six PTC thermistors.

In order to achieve full thermal protection, it is necessary to combine a thermally delayed overcurrent release and a PTC thermistor. For full motor protection implemented only with PTC thermistors, please inquire.

The SIRIUS 3RN2 thermistor motor protection device for protecting motors against overheating by means of direct temperature measurement, also for a hazardous area with ATEX approval, can be ordered separately. For further details, see Catalog IC 10.

PTC thermistor characteristic

The PTC thermistor is a temperature-dependent component. At the smallest changes in temperature in the region of the rated shutdown temperature, the resistance of the PTC increases steeply.

PTC sensor characteristic

NTC thermistor

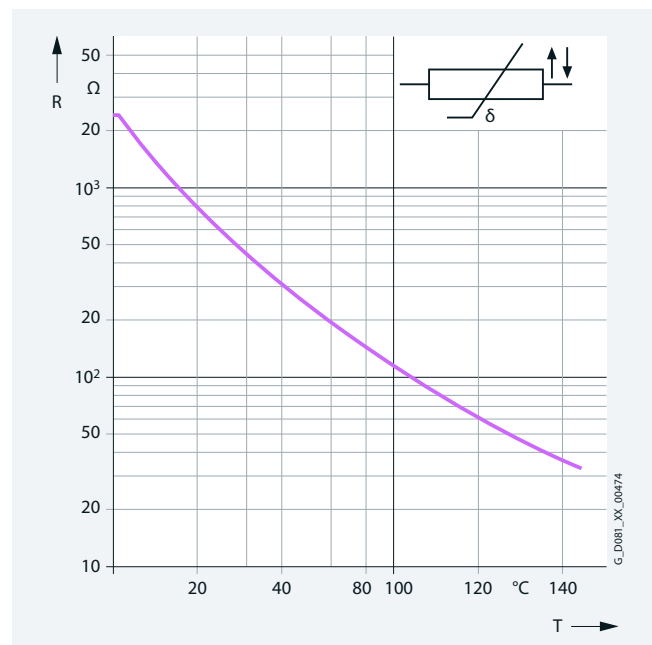

NTC thermistors have a negative temperature coefficient and conduct current at higher temperatures better than at lower temperatures.

NTC thermistors are typically used for temperature compensation of electronic circuits, or to limit inrush currents, to achieve the soft starting of electrical machines, for example.

Motor temperature monitoring and shutdown using NTC thermistors is unusual, but it is technically possible. The tripping temperature can be set when using suitable tripping devices of this type.

NTC thermistors for tripping: 15th position of the Article No. letter **Z** and order code **Q2A**.

For line operation, the SIRIUS 3RS1, 3RS2 temperature monitoring relay, which forms part of the protection equipment, can be ordered separately. For further details, see Catalog IC 10.

NTC thermistor characteristic

Introduction

Motor protection

Overview

Pt100/Pt1000 resistance thermometer

1

The resistance thermometer has a chip for a temperature sensor, the resistance of which changes in relation to temperature according to a series of reproducible basic values. The changes in resistance are transferred as changes in current. At 0 °C, the measurement resistances are adjusted to 100 Ω for the Pt100 and 1000 Ω for the Pt1000, and correspond to the accuracy class B (i.e. the relationship between resistance and temperature). The limit deviation is ± 0.3 °C, and the admissible deviations are defined in EN 60751.

Similar to the method of operation of the Pt100, the relationship between the temperature and the electrical resistance of conductors is utilized in the Pt1000 to measure the temperature, just like with the additional resistance thermometers described above.

Pure metals undergo larger changes in resistance than alloys and have a relatively constant temperature coefficient.

The order options for the Pt100/Pt1000 temperature sensors are described in Chapter 2 (15th position of the Article No.: **H, J, K, L, P, Q, or R**, or order codes **Q35, Q36, Q60, Q61, Q62, Q63, Q64, Q67, Q68, Q72, Q78, or Q79**).

Temperatures for alarm and tripping can be set as required when using converters from Siemens that determine the motor temperature in accordance with the measuring principle described above. With these devices, the measured signal is evaluated directly in the converter.

In line operation, the SIRIUS 3RS1, 3RS2 temperature monitoring relay can be ordered separately for the protection equipment. For further details, see Catalog IC 10.

Pt100/Pt1000 resistance thermometer characteristics

Overview

Location of the terminal box

The terminal box of the motor can be mounted in four different locations or positions. For the motors of the 1LE10 aluminum series, frame sizes 63 and 71, the terminal box can only be mounted on the top (16th position of the Article No. **4**).

The position of the terminal box is coded using the 16th position of the motor Article No.

When defining the position of the terminal box, please observe the following:

- Motors with feet must always be viewed looking onto the drive end with the shaft in the horizontal position. The feet are then always at "6 o'clock". This is especially important with construction types IM B6, IM B7, and IM B8, and also applies to combined construction types such as IM B35.
- Flange-mounted motors (e.g. IM B5) whose drive-end flange has a condensation drainage hole must always be viewed looking onto the drive end with the shaft in the horizontal position. The condensation drainage hole is then always at "6 o'clock".

The aluminum series motors 1LE10 and 1PC10 have cast feet in the standard version in frame sizes up to 132 and for the short housing version frame size 160, (e.g. IM B3, IM B6, etc.). The long housing version frame size 160, along with frame size 180 and 200, is available only with screwed on feet. If rotation of the terminal box is to be possible in the future, the "Screwed-on feet" option, order code **H01**, must be ordered. In accordance with the type of construction, spare holes that are not used for mounting the feet can be used by the customer. If the customer would like this option, it is advisable to include order code **H10** "Housing with screw mounting" in the order – possible only for frame sizes 80, 90, 180 and 200. Responsibility for any strength calculations required for this type of customer mounting lies with the customer.

For all motors with increased power and with feet, the feet are screwed-on as standard. The terminal box can be rotated later. Motors with frame sizes 225 to 315 are supplied as standard with cast feet.

Terminal box on right-hand side:
16th position of the Article No. digit **5**

Terminal box on left-hand side:
16th position of the Article No. digit **6**

Terminal box below:
16th position of the Article No. digit **7**

Location of the terminal box with the corresponding digits in the 16th position of the Article No.

The number of winding ends depends on the winding design. Three-phase motors are connected to the three phase conductors L1, L2 and L3 of a three-phase system. The rated voltage of the motor in the running connection must match the phase conductor voltages of the network.

When the three phases are operating in a time sequence and are connected to the terminals of the motor in alphabetical order U1, V1 and W1, clockwise rotation of the motor shaft is established as viewed onto the drive end. The direction of rotation of the motor can be changed to counterclockwise if two connecting leads are interchanged.

Labeled terminals are provided to connect the protective conductor.

A PE terminal is provided in the terminal box for grounding. A grounding terminal is provided on the outside of the motor housing – special version for 1LE1/1PC1 motors. Order code **H04**

External grounding terminal/external grounding is standard for 1LE15/16 motors from frame size 180 upwards and for 1LE5/1MB5 motors of frame sizes 400 and 450.

A second external grounding connection can also be ordered. Order code **H70** (must be ordered in combination with order code **H04**)

If a brake control system or thermal protection is installed, the connections will also be in the terminal box. The motors are suitable for direct connection to the line supply.

Introduction

Connection, circuit and terminal boxes

Overview

Design of the terminal box

The number of terminals and the size of the terminal box are designed for standard requirements.

For special requirements, or on customer request, a larger terminal box can be supplied.

For motors with frame sizes 71 up to 90, the following constraints apply:

For configuration, note that, when the terminal box is located on the left or right-hand sides, the customer must not align the cable entry towards the housing feet, because this can cause collisions between the motor connection cables and the foundations.

Larger terminal box
Order code **R50**

If the necessary installation angle of the motor would cause machine components to collide with the terminal box, the terminal box can be moved from the drive end (DE) to the non-drive end (NDE). Only use according to temperature class 155 (F). When the terminal box is rotated to the non-drive end (NDE) of the motor, it is important to note that dimensions "C" and "CA" will not comply with the values specified by IEC 60072. Dimensional drawings can be requested via Innomatics Configurator.

Order code **H08**

Motor connection

Line feeder cables

The line feeder cables must be dimensioned acc. to DIN VDE 0298. The number of required feeder cables, if necessary in parallel, is defined by:

- _ The max. cable cross-section which can be connected,
- _ The cable type,
- _ The cable routing,
- _ The ambient temperature and the corresponding admissible current in accordance with DIN VDE 0298,
- _ The requirements according to IEC/EN 60204-1,
- _ The requirements according to IEC/EN 60079-14 for 1MB motors.

For motors with auxiliary terminals (e.g. 15th position of the Article No. letter **B**), additional cable entry holes are provided (M16 × 1.5 or M20 × 1.5 depending on frame size). For further details, see the data sheet function in the Innomatics Configurator.

The terminal box is located on the housing and bolted in place. The terminal box can be turned by 4 × 90° degrees on the terminal base of the machine housing in the case of a terminal board with 6 terminal studs (standard version).
Order code **R09**

Parallel feeders

Some motors must be fitted with parallel feeders due to the maximum permissible current per terminal. These motors are indicated in the selection and ordering data in the respective chapter.

The temperature rises in the terminal box must be taken into account when selecting the connection cable or individual connections.

These approximate temperature rises are as follows:

- _ Range of ambient temperature (T_{amb}) +50 K for motors with temperature class Th.Cl.155 (F).
- _ Range of ambient temperature (T_{amb}) +60 K for motors with temperature class Th.Cl.180 (H).
- _ Without any specifications in field 19 (T_{amb}) on the rating plate, T_{amb} is equal to 40 °C.

Cable entry on the terminal box

With a view onto the drive end of the motor with the shaft in the horizontal position and the terminal box on the top, the cable entry is always on the right-hand side of the motor, as shown in the figure below – standard position 0°.

The terminal box can be rotated on the base of the motor housing such that the cable entry is located in the positions given below:

- _ Towards the drive end (DE)
(rotation of terminal box by 90°,
entry from DE) for B5 types of constructions only with order code **H08!**
With B14 construction types, the customer must ensure that sufficient space is available for cable outlet.
Order code **R10**
- _ Towards the fan end (NDE)
(rotation of terminal box by 90°,
entry from NDE)
Order code **R11**
- _ Opposite the standard position 0°
(rotation of terminal box by 180°,
entry opposite the standard position 0°)
Order code **R12**

The dimensions of the terminal box are listed in the section "Dimensions" on pages 2/148 to 2/176 in accordance with the frame size and the "Dimensional drawings".

If the position of the terminal box (right-hand side, left-hand side, or top) is changed, the position of the cable entry must be checked and, if necessary, ordered with the corresponding order codes (**R10**, **R11**, and **R12**).

Ordering example:

Terminal box on right-hand side (16th position of the Article No. digit **5**):

Cable entry is from below unless another order code is specified.

Cable entry from drive end (DE) – Article No. with **-Z** and order code **R10**.

For cable entry to a standard terminal box, a metal cable gland can be ordered for motor connection.

One metal cable gland – Article No. with **-Z** and order code **R15**.

For special requirements for which standard holes for the cable entries are inadequate for the UK market, reduction pieces for M cable glands in accordance with British Standard that are mounted on both cable entries can be supplied (only up to frame size 160).
Order code **R30**

Frame size	Cable entry acc. to	
	IEC	British Standard
100	2 × M32	2 × M20
112/132	2 × M32	2 × M25
160	2 × M40	2 × M32

Terminal box in standard position, detailed view

1) 1MB15/6 also applies to 1MB154, 1MB164; 1MB5 also applies to 1MB554.
2) 11th position of Article No. for all number of poles **0, 2, 4, 5**; for 6-, 8-pole **6**.
3) Article No with the following order code:
R5L – terminal box on left-hand side (base below)
R6R – terminal box on right-hand side (base below)
R7L – terminal box bottom left
R7R – terminal box bottom right
4) Only possible in combination with type of construction IM B5.

5) Not possible together with terminal box code (16th position of the Article No.) **0, 1, 5, 6** and flange A 900.
6) Only possible with order code **R09**.
7) With a flange, only possible with order code **H08**.
8) 1MB15/6 also applies to 1MB154, 1MB164; 1MB5 also applies to 1MB554.
9) 11th position of Article No. for all number of poles **7, 8**; for 2-, 4-pole **6**.

Introduction

Connection, circuit and terminal boxes

Overview

Motor connectors

Motors of frame sizes 63 to 132 can be supplied with a motor connector.

The motor connectors are mounted on the specially designed terminal box at the factory and are aligned towards NDE in the basic version. The terminal boxes can be rotated by $4 \times 90^\circ$ on the base of the motor housing (order codes **R10**, **R12**, and **R13**).

The following motor connector variants are available:

- _ Motor connector HAN10B-10E
Order code **R70**
- _ Motor connector HAN10B-10E EMC
Order code **R71**

When ordering with order code **R70** and **R71**, order code **R50** is included.

- _ Motor connector HAN3A-Q12 EMC
Order code **R72**
- _ Motor connector HAN3A-Q12
Order code **R73**

Motor connector assignment

Motor Type	Frame size	Motor connectors Type	Size of the terminal box
1LE10	63 ... 70	HAN10B-10E HAN10B-10E EMC	TB1B60
	80 ... 90	HAN3A-Q12 HAN3A-Q12 EMC	TB1E00 with mounted brake TB1E10
	80 ... 90	HAN10B-10E HAN10B-10E EMC	Only possible with TB1E10
1LE10, 1PC10	100 ... 132	HAN10B-10E HAN10B-10E EMC	Currently only available with TB1F10 (frame sizes 100 and 112) or TB1H10 (frame size 132)

Technical characteristic values of motor connectors according to EN 60664-1 and EN 61984

Characteristic value	Motor connectors			
	HAN3A-Q12		HAN10B-10E	
Degree of pollution	3	2	3	2
Rated current	10 A		16 A	
Rated voltage	400 V	400/690 V	500 V	400/690 V
Rated voltage acc. to UL/CSA	600 V		600 V	

For further technical specifications of the motor connectors, refer to the catalog of Harting Deutschland GmbH & Co. at www.harting.com

or

<https://b2b.harting.com/ebusiness/de/industrie-steckverbinder-han/100382>.

Protruding cable ends

For confined spaces, protruding cable ends can be ordered without a terminal box with cover plate.

The following lengths of protruding cables can be ordered as standard using order codes:

- _ 3 cables protruding, 0.5 m long¹⁾
Order code **R20**
- _ 3 cables protruding, 1.5 m long¹⁾
Order code **R21**
- _ 6 cables protruding, 0.5 m long
Order code **R22**
- _ 6 cables protruding, 1.5 m long
Order code **R23**
- _ 6 cables protruding, 3.0 m long
Order code **R24**

The cross-section of the named cable refers to a coolant temperature of up to CT 40 °C.

In Combination with motor protection (15th position of the Article No.) or anti-condensation heating on request.

¹⁾ For 3 protruding cables only, it must be specified in plain text whether star or delta connection is required (voltage code **90** and **M1Y**).

1LE5, 1MB5	355 (500 kW)	TB3R01	4 entries complete with sealing plugs, thread in terminal box, terminal box mounted and screwed in place	Cast iron	_ Cable lug _ Rigid cable, no cable lug
1LE5/ 1MB5	400 ... 450	TB3R61	4 entries complete with sealing plugs, thread in terminal box, terminal box mounted and screwed in place	Sheet steel	_ Cable lug _ Rigid cable, no cable lug
		1XB1631 1XB7750			

Note:

Optional cable entries are available for the main connection of the motor for standard cables (order code **R15**) and EMC shielded cables (order code **R14**). These options also include cable glands for the accessories connected in the main terminal box. Alternatively, cable glands are optionally available in maximum configuration for standard cables (order code **R18**) or EMC shielded cables (order code **R16**); thus motors in frame sizes 100 to 450 are supplied with 2 cable glands for the main connection and all necessary cable glands (also auxiliary terminal box) for the accessories. For explosion-protected motors, cable glands for armored cables are optionally available for the main connection (order codes **R45**, **R46**). Optional cable glands are not possible for flame proof motors with optional Ex db terminal box (order codes **R48**, **R49**).

*) 2 conductors connected in one saddle terminal (option code **R19**). The number of cable entries must be increased accordingly in the order.

**) 2 conductors connected on one double terminal.

¹⁾ In addition to the exact part designation, please specify the machine type and the serial number in all orders for spare parts and repair parts.

²⁾ Designed for cable glands with O-ring.

³⁾ NPT threads can be ordered with order code **Y61**.

⁴⁾ 11th position of Article No. for all number of poles **0, 2, 4, 5**; for 6-, 8-pole **6, 7**; for 8-pole **8**.

⁵⁾ 11th position of Article No. for all number of poles **7, 8**; for 2-, 4-pole **6**. (for high current alternatively TB3Q61)

⁶⁾ 11th position of Article No. for all number of poles **1, 2, 3, 4**.

⁷⁾ 11th position of Article No. for 2-, 4-pole **5**.

⁸⁾ For 1LE1021, 1LE1023, and 1MB10, terminal box TB1E10 normal version.

⁹⁾ Valid for cables class. 5 according to IEC 60228. The number of required feeder cables, if necessary in parallel, depends on the rated current.

¹⁰⁾ Cable glands for EMC shielded cables (order code **R14, R16**), armored cables (order code **R45, R46**) or special ones may have a different clamping range.

Terminal connection

The terminal board accommodates the terminals that are connected to the leads to the motor windings. The terminals are designed so that 1LE1-motor types for frame sizes 71 to 315 and for all 1MB-motor types, the external (line) connections can be made without the need for cable lugs. The description of the connection system applies to 1MB for all types of protection, except in conjunction with terminal box Ex db (order code **R48**).

Note:

Cable entry thread for accessories FS 63 to 180: M16 x 1,5, FS 200 to 450: M20 x 1,5

For footnotes, see previous page.

Introduction

Degrees of protection

Overview

All motors are designed to IP55 degree of protection. They can be installed in dusty or humid environments. The motors are suitable for operation in tropical climates. Guide value < 60 % relative air humidity at CT 40 °C. Other requirements are available on request (see table on page 1/35).

Brief explanation of the degree of protection

IP54:

- _ Protection against harmful dust deposits
- _ Protected against spray water

IP55:

- _ Protection against harmful dust deposits
- _ Protection against water jets from any direction

IP56:

- _ Protection against harmful dust deposits
- _ Protection against powerful water jets from any direction

Order code **H22**

Important: Note that submersion by waves or total immersion, even temporarily, is not permitted especially in the case of motors with fans. This corresponds to IP67 or IP68 degree of protection (please inquire).

EN 60034-5 defines protection level 6 for water protection as: "Protection against water due to heavy seas or water in a powerful jet". IP56 degree of protection can only be used with the requirement "Protection against a powerful jet" and not for the requirement "Protection against heavy sea". Not possible in combination with brake BFK458 (order code **F01**).

IP65:

- _ Complete protection against dust deposits
- _ Protection against water jets from any direction

Order code **H20**

In EN 60034-5, the code 6 for protection against the ingress of foreign bodies and touch hazard protection for electrical machines is not listed – Data for code 6 (protection against the ingress of dust) is given in EN 60529.

Not possible in combination with HOG 9 DN 1024 I rotary pulse encoder (order code **G05**) and/or brake BFK458 (order code **F01**) and/or paint finish, cast-iron parts primed (order code **S00**).

EN 60529 contains a comprehensive description of this degree of protection as well as test conditions.

With motors that have a vertical shaft extension, the end user must prevent an ingress of fluid along the shaft.

For motors with shaft extension pointing downwards, the version "Protective cover for types of construction" order code **H00** is urgently recommended, see also the explanations on "Types of construction" on page 1/57.

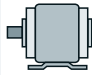

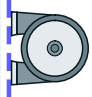

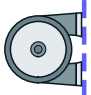

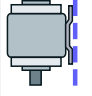

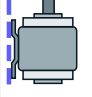

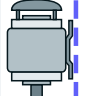

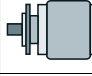

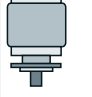

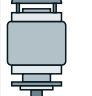

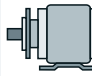

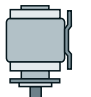

With flange-mounted motors, for IM V3 type of construction, collection of fluid in the flange basin can be prevented by drainage holes (on request).

The condensation drainage holes at the drive end (DE) and non-drive end (NDE) are sealed (IP55) on delivery.

If the condensation drainage holes are ordered for motors of the IM B6, IM B7 or IM B8 type of construction (feet on side or top), the position of the drainage holes will be in the correct position for the type of construction.

Order code **H03**

Overview**Standard types of construction and special types of construction**

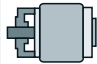

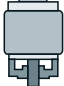

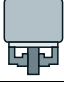

Type of construction acc. to EN 60034-7		Frame size	Letter of the 14th position of the Article No.	Additional identification code -Z with order code
Without flange				
IM B3/IM 1001		63 to 450	A	-
IM B6/IM 1051		63 to 355	T	-

IM B35/IM 2001		63 to 450	J	-
IM V15/IM 2011		71 to 315	W	-

In the IEC 60072 standard, flanges FF with through holes and flanges FT with tapped holes are specified.

For footnotes, see next page.

Mechanical version

Introduction**Types of construction****Overview**

Type of construction acc. to EN 60034-7	Frame size	Letter of the 14th position of the Article No.	Additional identification code -Z with order code
With flange			
IM B14/IM 3601 	63 to 160	K	-
IM V19/IM 3631 	80 to 315	L	-
IM V18/IM 3611 without protective cover 	80 to 315	M ¹⁾	-
IM V 18/IM 3611 with protective cover 	80 to 315	M	+ H00 ²⁾
IM B34/IM 2101 	80 to 315	N	-
With flange - next largest			
IM B14/IM 3601 	80 to 315	K	+ P01
IM B34/IM 2101 	80 to 315	N	+ P01
IM V18/IM 3611 without protective cover 	80 to 315	M ¹⁾	+ P01
IM V 18/IM 3611 with protective cover 	80 to 315	M	+ P01 + H00 ²⁾
IM V19/IM 3631 	80 to 315	L	+ P01

¹⁾  The following applies for explosion-protected motors:
In the case of the types of construction with shaft extension pointing downwards, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

²⁾ Standard cylindrical shaft extension (second shaft extension), order code **L05**, is not possible.

Overview

In IEC 60072, flanges are assigned to the frame sizes as FT with tapped holes. See the table on the next page for flange dimensions.

The dimensions of the following types of construction are identical:

IM B3, IM B6, IM B7, IM B8, IM V5 and IM V6

IM B5, IM V1 and IM V3

IM B14, IM V18 and IM V19

Motors in the standard power range can be ordered in basic types of construction IM B3, IM B5 or IM B14 and operated in mounting positions IM B6, IM B7, IM B8, IM V5, IM V6, IM V1, IM V3 (up to frame size 160 L) or IM V18 and IM V19.

Lifting eyes are available for transport and installation in a horizontal position. In conjunction with the lifting eyes, for the purpose of stabilizing the position when the motor is arranged vertically, additional slings (EN 1492-1) and/or lashings (EN 12195-2) must be used.

When a motor for mounting position IM V1 is ordered directly, the motor is supplied with lifting eyes for vertical mounting (up to frame size 90 and frame sizes 180 and 200 for aluminum motors without eyebolts).

The motors are designated in accordance with the types of construction on the rating plate.

With motors that have a vertical shaft extension, the end user must prevent an ingress of fluid along the shaft. In the case of all types of construction with shaft extension pointing downwards, the version "with protective cover" is urgently recommended, see section "Degrees of protection" on page 1/56 – housing version.

Motors with feet, in some cases, have two fixing holes at the non-drive end (NDE), see dimension tables on pages 2/148 to 2/176.

A screwed-on cover (made of sheet metal or plastic) is included as standard for horizontal types of construction and types of construction with shaft pointing upwards (14th position of the Article No. letter **A, T, U, V, D, F, H, J, K, L, N**) on motors up to FS 160 in combination with condensation drainage holes, order code **H03**.

Introduction

Flange dimensions

Overview

In IEC 60072, the frame sizes are allocated flange FF with through holes and flange FT with tapped holes.

The designation of flange A and C according to DIN 42948 (invalid since September 2003) are also listed for information purposes. See the table below.
(Z = the number of retaining holes)

Frame size	No. of poles	Type of construction	Flange type – possibly with order code	Flange with		Dimension designation acc. to IEC							
				Acc. to IEC 60072-1	Acc. to DIN 42948	LA	LE	M	N	P	S	T	Z

Introduction

Shaft and rotor

Overview

Shaft extension

60° center hole acc. to DIN 332, Part 2 with M3 to M24 tapped hole depending on the shaft diameter (see dimension tables in section 2 of the catalog).

DE (shaft extension)

Diameter mm	Thread mm
7 ... 10	DR M3
> 10 ... 13	DR M4
> 13 ... 16	DR M5
> 16 ... 21	DR M6
> 21 ... 24	DR M8
> 24 ... 30	DR M10
> 30 ... 38	DR M12
> 38 ... 50	DR M16/DS M16
> 50 ... 85	DS M20
> 85 ... 130	DS M24

Shaft extension with standard dimensions, without feather keyway

For motor series 1LE1, 1LE5, 1MB1, 1MB5, and 1PC1, the standard shaft extension can be ordered with standard dimensions without a feather keyway. The key convention does not have to be stamped onto the rating plate for balancing.

Order code **L04**

Standard shaft made of stainless steel

A standard shaft made of stainless steel can be ordered for the 1LE1, 1LE5, 1MB1, 1MB5, and 1PC1 motor series (e.g. 1.4021). This is only possible for shaft extensions of standard dimensions.

Order code **L06**

Special non-rusting materials are only available on request.

Admissible changes to the shaft extension DE (**Y58**)

1LE5, 1MB5	315	2	140	70 ... 280 (step 5 mm)	65	55 ... 80 (step 1 mm)
		4 ... 8	170	85 ... 280 (step 5 mm)	80	65 ... 95 (step 1 mm)
	355	2	140	70 ... 280 (step 5 mm)	75	55 ... 85 (step 1 mm)
		4 ... 8	170	85 ... 280 (step 5 mm)	95	65 ... 100 (step 1 mm)

¹⁾ At maximum admissible diameter, a step increase in shaft diameter is not possible.

²⁾ For explosion-protected motors Ex db, Ex eb (Zone 1) on request.

Non-standard cylindrical shaft extension

The non-standard cylindrical shaft extension can be used on the drive end (DE) (with plain text according to table). The feather keys are supplied in every case.

Order code **Y58**

For order code **Y58** non-standard cylindrical shaft extension (DE):

- _ Dimension D: less than or equal to the inner diameter of the roller bearing, tolerance band less than tolerance band acc. to IEC 60072-1.
- _ Dimension E: less than or equal to 2 × length E (standard) of the shaft extension.

When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with IEC 60072-1, Form A are used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case.

See the table below "Admissible changes to the shaft extension DE" and the dimension tables in the relevant sections of the catalog.

Overview

Standard, cylindrical shaft extension NDE acc. to IEC 60072-1 (second shaft extension)

Order code **L05** (on request)

For a coupling output, the standard, cylindrical shaft extension can transmit the full rated power.

Please also inquire about the transmitted power and admissible cantilever force if belt pulleys, chains or gear pinions are used on the standard, cylindrical shaft extension.

A standard, cylindrical shaft extension (second shaft extension) NDE is not available if a rotary pulse encoder and/or a separately driven fan has been mounted onto the motor. Please inquire for mounted brakes.

Dimensions and tolerances for keyways and keys are designed to IEC 60072-1. The motors are always supplied with a key inserted in the shaft.

If the second shaft extension has non-standard dimensions, this must be ordered with order code **Y59** non-standard shaft dimensions NDE.

For the order code **Y59** (with plain text specifications according to the table).

- _ Dimension D: less than or equal to fan hub inner diameter, for frame size 160 tolerance band is less than tolerance band to IEC 60072-1
- _ Dimension E: less than or equal to $2 \times$ length E (standard) of the shaft extension

When motors are ordered that have a longer or shorter shaft extension than normal, the required position and length of the feather keyway must be specified in a sketch. It must be ensured that only feather keys in accordance with IEC 60072-1, Form A are used. The feather keyway is positioned centrally on the shaft extension. The length is defined by the manufacturer in accordance with the appropriate standard. Not valid for: Conical shafts, non-standard threaded journals, non-standard shaft tolerances, friction welded journals, extremely "thin" shafts, special geometry dimensions (e.g. square journals), hollow shafts. Valid for non-standard shaft extensions DE or NDE. The feather keys are supplied in every case.

See the table below "Admissible changes to the shaft extension NDE" and the dimension tables in the relevant sections of the catalog.

Admissible changes to the shaft extension NDE (Y59)

		4 ... 8	170	85 ... 280 (step 5 mm)	80	65 ... 92 (step 1 mm)	

Non-standard, cylindrical shaft extensions up to the specified lengths and diameters can be supplied for the motor series listed in the tables "Admissible changes to the shaft extension DE (Y58)" and "Admissible changes to the shaft extension NDE (Y59)". All other dimensions are available on request.

It is the responsibility of the customer to ensure that the admissible cantilever forces are reduced in accordance with the non-standard shaft extension.

¹⁾ At maximum admissible diameter, a step increase in shaft diameter is not possible.

²⁾ For explosion-protected motors Ex db, Ex eb (Zone 1) on request.

Introduction

Shaft and rotor

Overview

Shaft extension run-out, concentricity and perpendicularity in accordance with IEC 60072-1 precision class for flange-mounted motors

In IEC 60072-1, normal class (normal) and precision class (reduced) are defined:

1. Circular run-out tolerances for the shaft extension
2. Concentricity tolerances for the shaft extension and flange centering
3. Perpendicularity tolerances for the shaft extension and flange surface

The shaft extension run-out, concentricity and perpendicularity according to IEC 60072-1 precision class for flange-mounted motors can be ordered using order code **L08**.

This order code can be combined for motors with deep-groove bearings of series 60..., 62... and 63... This is not possible in combination with a mounted brake or encoder.

The shaft extension run-out can be ordered according to IEC 60072-1 precision class for types of construction without flange with order code **L07**.

Circular run-out tolerance for the shaft extension

Diameter of the cylindrical shaft extension D	Circular run-out tolerance	
	Normal class	Precision class (reduced)
mm	mm	mm
≤ 10	0.03	0.015
> 10 ... 18	0.035	0.018
> 18 ... 30	0.04	0.021
> 30 ... 50	0.05	0.025
> 50 ... 80	0.06	0.03
> 80 ... 120	0.07	0.035

Concentricity tolerance of the centering spigot and linear movement tolerance of the flange surface to the shaft extension axis

1080	1000	1150	0.2	0.1

Measures for gear mounting

Overview

The flange-mounted motors can be equipped with a radial sealing ring in order to mount gearing.

Order code **H23**

It must be ensured that the sealing ring is lubricated using grease, oil mist, or oil spray. (It is not admissible to use pressurized oil > 0.1 bar.) We recommend that the admissible bearing loads are carefully checked.

Overview

All rotors are dynamically balanced with an inserted half key. This corresponds to vibration severity grade A (normal or standard). DIN EN 60034-14 Aug. 2018 regulates the vibrational behavior of machinery. Based on ISO 21940-32, the key convention "half key (H)" must be used for balancing.

Note:

If there is a keyway, a full feather key is always inserted on delivery.

The type of key convention is stamped on the face of the shaft extension at the customer side DE/NDE:

- F = Balancing with full key
(full-key convention)
- H = Balancing with half key
(half-key convention) – standard
- N = Balancing without key –
Plain text required
(convention without key)

For motors up to frame size 112 the code is stamped on the rating plate.

Full-key balancing or balancing with full feather key (F) is possible by specifying order code **L02** (additional charge).

Balancing without feather key (N) is possible by specifying order code **L01** (additional charge).

Vibration severity grade A is the standard version and is valid up to a rated frequency of 60 Hz. If 2-pole motors of frame sizes 280 and 315 are to be rigidly installed, cast feet are necessary in order to comply with the vibration requirements of IEC 60034-14. IE4 2-pole motors in frame size 315 and pole-changing motors (4-pole/2-pole) fulfill the vibration requirements specified in IEC 60034-14 only when the motor is elastically suspended.

The low-vibration version B can be supplied to fulfill stricter requirements on smooth running (additional charge).

Vibration severity grade B Order code **L00**

Conditions:

Not possible in combination with cylindrical roller bearings.
Order code **L22**

Not possible in combination with
order codes **G40, G41, G42**.

2-pole trans-standard aluminum motors in frame sizes 180 and 200 (14th position of the Article No. is A, C, D, J, T, U, V) have cast-iron feet.

For converter operation vibration severity grade B is guaranteed only at rated Direct On Line (DOL) speed at 50 Hz or 60 Hz.

Motors in type of protection Ex db eb IIB or Ex db eb IIC reach limits of grade B up to rated speed (DOL frequency).

The limits stated in the table apply to uncoupled, freely suspended, idling motors.

This vibration is assessed in accordance with vibration severity grade A or B according to EN 60034-14 (see table).

The rating plate (with DOL data) of the motor is marked with vibration severity grade B.

For converter operation with frequencies higher than 60 Hz, special measures e.g. balancing is required for compliance with the specified limit values (plain text: maximum supply frequency/speed).

For further details, see the online help in the Innometrics Configurator.

Limits (rms values) for max. vibration severity in terms of vibration displacement (s) and vibration velocity (v) for the shaft height H

Vibration severity grade	Machine installation	Shaft height H in mm			
		56 ≤ H ≤ 132		H > 132	
		\ddot{x}_{rms} μm	v_{rms} mm/s	\ddot{x}_{rms} μm	v_{rms} mm/s
A	Free suspension	45	2.8	45	2.8
	Rigid clamping	–	–	37	2.3
B	Free suspension	18	1.1	29	1.8
	Rigid clamping	–	–	24	1.5

For details, see standard EN 60034-14 Aug. 2018, EN 60034-14:2004 + A1:2007

If the type tests for machines with shaft height H > 132 mm demonstrate a determining component with twice the line frequency, the limit for maximum vibration severity in the Table (for grade A) can be increased from 2.3 mm/s (rms value) to 2.8 mm/s (rms value) or (for grade B) from 1.5 mm/s (rms value) to 1.8 mm/s (rms value). Higher values must be agreed beforehand. A component with twice the line frequency is regarded as dominant if the type test shows that it is greater than 70 % of 2.3 mm/s (rms value) (for grade A) or 70 % of 1.5 mm/s (rms value) (for grade B).

Introduction

Noise levels for line operation

Overview

The noise is measured in accordance with EN ISO 1680 in a dead room. It is specified as A-weighted enveloping surface sound pressure level L_{pFA} in dB (A).

This value is the spatial average value of the sound pressure levels measured at the measuring surface. The measuring surface is a cube 1 m away from the surface of the motor.

The sound power level is also specified as L_{WA} in dB (A).

The specified values are valid at 50 Hz and rated power (see the selection and ordering data). The tolerance is +3 dB. Noise values for motors in converter operation on request.

To reduce noise levels, 2-pole motors from frame size 132 S to frame size 355 and higher can optionally be equipped with a unidirectional axial-flow fan.

For frame sizes 400 and 450, the axial-flow fan is standard.

The values are listed in the table "Low-noise version" below.

Clockwise rotation:

Order code **F77**

Counterclockwise rotation:

Order code **F78**

Second shaft extension and/or mountings (mounting of brake, separately driven fan or encoder) not possible except for 1MB.553 motors.

Low-noise version			
Motor series	Frame size	2-pole motors	
		L_{pFA} dB (A)	L_{WA} dB (A)
1LE1 ¹⁾	132	60	72
1MB1 ¹⁾	160	60	72
1LE10, 1LE15/6, 1MB15/6 ²⁾	180	63	76
	200	64	77
1LE15/6, 1MB15/6 ²⁾	225	72	86
1LE5	250	73	87
	280	72	85
	315	76	90
1LE5, 1MB5	400	74	90
	450	75	91

For the motor types 1LE5 and 1MB5 of frame sizes 315 and 355, the noise level is reduced by 1 to 2 dB with the low-noise version.

¹⁾ With the exception of 1LE1 and 1MB1 motors with order code **F90** – version "Forced-air cooled motors without external fan and fan cover".

²⁾ 1MB15/6 also applies to 1MB154, 1MB164, and 1MB155.

Overview

Bearing lifetime (nominal lifetime)

The nominal bearing lifetime is defined according to standardized calculation procedures (ISO 281) and is reached or even exceeded for 90 % of the bearings when the motors are operated in compliance with the data provided in the catalog.

Under average operating conditions, a lifetime (L_{10h}) of 100 000 hours can be achieved.

Generally, the bearing lifetime is defined by the bearing size, the bearing load, the operating conditions, the speed and the grease lifetime. A bearing lifetime calculation is possible on request.

Bearing system

The bearing lifetime of motors with horizontal mounting is 40 000 hours if there is no additional axial loading at the coupling output and 20 000 hours when utilized according to the maximum admissible load. This assumes that the motor is operated at 50 Hz. The nominal bearing lifetime is reduced for converter operation at higher frequencies.

In order to achieve the calculated lifetime in continuous operation, the admissible vibration values (measured at bearing plate) must be determined according to evaluation zones A and B stipulated in ISO 10816. If higher vibration velocities occur in operation (e.g. with order code **H02**), special measures must be taken (please inquire).

Due to their physical characteristics, variable-speed motors have a different bearing lifetime under the same load conditions – this relationship is linear, i.e. if the frequency increases by 20 % from 50 Hz to 60 Hz, the lifetime decreases by 20 % from 20 000 to 16 000 hours under the load conditions specified in the catalog.

If the frequency falls by 20 % from 50 Hz to 40 Hz, under the load conditions specified in the catalog, the lifetime rises by 20 % from 20 000 to 24 000 hours.

It should be observed that, for types of construction IM B6, IM B7, IM B8, IM V5, and IM V6, the belt tension is only permitted to act parallel to the mounting plane or towards the mounting plane and the feet must be supported. Both feet must be secured for foot-mounting types of construction.

In the basic bearing system, the floating bearing is situated at the drive end (DE) and the located bearing is situated at the non-drive end (NDE). For motors of the 1MB.553 series, the located bearing DE is the standard version.

The bearing system is axially preloaded with a spring element at the drive end (DE) to ensure smooth running of the motor without play (see Fig. 1 in the diagrams of bearings on page 1/75).

From frame size 160 upwards, the located bearing is axially secured at the non-drive end (NDE).

For the 1LE5 and 1MB5 motors of frame sizes 400 and 450, the located bearing is situated at the drive end (DE) and the floating bearing is situated at the non-drive end (NDE).

The bearing system on these motors is axially preloaded with a spring element at the non-drive end (NDE) to ensure smooth running of the motor without any play (see Figs. 6 and 7 under the bearing diagrams on page 1/75).

Up to frame size 132, an additional axially-secured located bearing can be supplied on the non-drive end (NDE) complete with a retaining ring (see Fig. 2 under the diagrams of bearings on page 1/75) or, for frame sizes 400 and 450, the located bearing can be supplied at the non-drive end (NDE).

Order code **L21**

Depending on the specific installation conditions (axial forces, cantilever forces and type of construction), testing of additional measures for the bearing version is recommended. The located bearing can also be supplied at the drive end (DE) (see Fig. 3 under the diagrams of bearings on page 1/75).

A located bearing at the drive end (DE) is recommended when gearing is installed, for a shaft extension pointing downwards, or pumps and fans are mounted directly on the motor shaft.

Order code **L20**

For increased cantilever forces (e.g. belt drives), reinforced bearings can be used at the drive end (DE).

Versions with cylindrical roller bearings are not axially preloaded, and must always operate under adequate radial loads (it is not permissible that motors are operated on a test stand without additional radial loads). The locating bearing is located at the non-drive end (NDE) when cylindrical roller bearings are fitted.

Order code **L22**

1LE1, 1LE5, 1MB1, 1MB5, and 1PC1 motors can be supplied with reinforced bearings (size range O3) at both ends.

In this case, the bearing plates are made of cast iron (standard for series 1LE16 motors). Standard for motors of the 1MB.553 series from frame size 100 upwards.

Order code **L25**

A measuring nipple for SPM shock pulse measurement can be mounted to check bearing vibration. The motors have an M8 tapped hole for each bearing plate and a measuring nipple with a protective cap. If a second tapped hole is provided, it is fitted with a sealing plug. Not possible for frame sizes < 100. Order code **Q01**

Bearing selection for increased cantilever forces (see the Table "Bearing selection for 1LE10, 1MB10, and 1PC10 motors – Bearings for increased cantilever forces" on page 1/71) – for the maximum axial load, see page 1/86 onwards.

Introduction

Bearings and lubrication

Overview

Bearing insulation

To prevent damage caused by bearing currents, insulated bearings can be supplied for frame sizes 225 to 355 – they are recommended for motors from frame size 225 upwards. For frame sizes 400 and 450 (for converter operation), the bearing insulation is indispensable.

- _ **L50** (DE bearing insulation) means NDE located bearing as standard
- _ **L51** (NDE bearing insulation) means DE located bearing as standard
- _ **L50 + L51** (insulated DE and NDE bearings) means NDE located bearing as standard
- _ Combination of order codes **L50** or **L51** or **L50 + L51** with **L22** (bearing version for increased cantilever forces) means NDE located bearing as standard.
- _ In combination of order code **L50** with **L22**, it is necessary to reduce the radial load.

According to IEC 60034-1-11, it is up to the user in the case of DE bearing insulation (order code **L50**) + NDE bearing insulation (order code **L51**) to ensure grounding of the rotor.

The rotor grounding can be implemented either in the system via the coupled driven machine or in the motor via a grounding brush.

The grounding brush (order code **L52**) must always be provided when the driven machine is connected to the motor via an insulating coupling or an insulating belt output shaft.

Permanent lubrication

On motors equipped with permanent lubrication, the bearing grease lifetime is matched to the bearing lifetime. This can, however, only be achieved if the motor is operated in accordance with the catalog specifications.

In the basic version, the motors have permanent lubrication.

Regreasing

For motors which can be regreased at defined regreasing intervals, the bearing lifetime can be extended and/or unfavorable factors such as temperature, mounting conditions, speed, bearing size, and mechanical load can be compensated.

This regreasing option is possible in the following frame sizes:

- _ Frame sizes 100 to 160: M8 × 1 acc. to DIN 71412-A (conical lubricating nipple)
- _ Frame sizes 180 to 450: M10 × 1 acc. to DIN 3404-A (flat lubricating nipple).
- _ Frame sizes 400 to 450: M10 × 1-5.8-A acc. to DIN 3404-A.- (flat lubricating nipple)

Order code **L23**

(frame sizes ≥ 280 basic version, for the Performance Line motors of frame sizes ≥ 160 basic version)

A regreasing device with M10 × 1 conical lubricating nipple to DIN 71412-A can be optionally provided for frame sizes 180 to 450.

Order code **L19**

In the case of motors equipped with regreasing device, information regarding regreasing intervals, quantity of grease, type of grease and any additional data is provided on the lubrication plate or rating plate. For regreasing intervals for the basic version, see the Table "Grease lifetime and regreasing intervals for horizontal installation". For motors with a mounted holding brake (order code **F01**) a regreasing device cannot be installed, including up to FS 160.

Mechanical stress and grease lifetime

High speeds that exceed the rated speed with converter operation and the resulting increased vibrations alter the mechanical running smoothness and the bearings are subjected to increased mechanical stress. This reduces the grease lifetime and the bearing lifetime (please inquire where applicable).

The use of rigid couplings should be avoided as far as possible. For converter operation in particular, compliance with the mechanical limit speeds n_{\max} at maximum supply frequency f_{\max} is essential, see the following table "Mechanical limit speeds n_{\max} at maximum supply frequency f_{\max} ".

Overview

Mechanical limit speeds n_{\max} at maximum supply frequency f_{\max} (standard values) for 1LE1, 1LE5, 1PC1 motors – basic version and 1LE15 and 1LE16 motors – basic version with order codes L22, L25, L28 – 1MB10/5/6 motors with order codes L22 and L25

The specified limit speeds are applicable to motors without additional mountings, such as brakes or rotary encoders. In such applications, the characteristics of the respective mounting parts must be taken into account.

Note:

Mechanical limit speeds for Innomatics XP 1MB motors, see Chapter 6.

¹⁾ Order on request.

Introduction

Bearing selection table for 1LE10, 1MB10, and 1PC10 motors – basic version

The bearing selection tables are only intended for planning purposes. Authoritative information on the actual type of bearings fitted in motors already supplied can be obtained by the factory by quoting the serial number or can be read from the rating plate.

When deep-groove bearings with side plates are used, the side plate is on the inside. Located bearing at drive end (DE) for 1LE1, 1MB1 and 1PC1 motors, see special version Fig. 2 in the "Diagrams of bearings" on page 1/75.

¹⁾ For special uses and special greases, please inquire about grease lifetime and regreasing intervals.
²⁾ For every 10 K the coolant temperature is increased above 80 °C, the grease lifetime and regreasing interval are halved.
³⁾ 40 000 hours apply to horizontally installed motors with coupling output without additional axial loads.

⁴⁾ Deep-groove bearings with a side plate are used for regreasable versions (**L23**).
⁵⁾ Deep-groove bearings without a side plate are used for regreasable versions (**L23**).

Overview

Bearing selection table for 1LE15, 1MB15, 1LE16, and 1MB16 motors (bearings for increased cantilever forces – order code L22)

For NU bearings (cylindrical roller bearings), in contrast to ball bearings, a minimum cantilever force is required. Cylindrical roller bearings are not suitable for coupling output or for brief periods of no-load operation without cantilever forces.

$$F_{\min} \sim F_{\max}/2$$

Overview

Admissible cantilever forces

In order to calculate the admissible cantilever forces for a radial load, the line of force (i.e. the centerline of the pulley) of the cantilever force F_Q (N) must be within the free shaft extension (dimension x).

Dimension x (mm) is the distance between the point of application of the force F_Q and

the shaft shoulder. The dimension x_{max} corresponds to the length of the shaft extension.

Total cantilever force $F_Q = c \cdot F_u$

The pre-tension factor c is a value gained from experience from the belt manufacturer. The following approximate value can be assumed:

For normal flat leather belts with an idler pulley $c = 2$;
for V-belts $c = 2$ to 2.5 ;
for special synthetic belts (depending on the type of load and type of belt) $c = 2$ to 2.5 .

The circumferential force F_u (N) is calculated using the following equation

$$F_u = 2 \cdot 10^7 \cdot \frac{P}{n \cdot D}$$

F_u circumferential force in N
 P rated motor power (transmitted power) in kW
 n rated motor speed in rpm
 D belt pulley diameter in mm

Admissible cantilever forces – basic version

1LE10, 1MB10 motors (frame sizes 80 ... 160) and 1PC10 (frame sizes 100 ... 160) at 50 Hz

Valid are: x_0 values for $x = 0$ and x_{max} values for $x = l$ (l = shaft extension)

For motors Admissible cantilever force F_Q
at x_0 at x_{max}

Overview

1LE15/6 and 1MB15/6¹⁾ motors for 50 Hz with cylindrical roller bearings DE for frame sizes 280 to 315 in 4 to 8-pole version

1LE5, 1MB5 motors for 50 Hz with cylindrical roller bearings DE for frame sizes 225 to 355 in 2 to 8-pole version

¹⁾ Not valid for 1MB155 motors with type of protection Ex db eb.

Introduction

Bearings and lubrication

Overview

1

Admissible cantilever forces at 50 Hz – basic version

For motors in a horizontal type of construction, the maximum cantilever forces are specified as a function of the axial forces. See diagrams below.

Overview

Admissible cantilever forces – bearings reinforced at both ends – order code **L25**

1LE10, 1MB10 motors (frame sizes 80 ... 160) and 1PC10 (frame sizes 100 ... 160) for 50 Hz with deep-groove bearings reinforced at both ends

200	1810	1720	660	2870	2410	2480	1260	3630	2700	3050	1550	4200	3060	3510	1910	4660

The values shown do not assume a cantilever force on the shaft extension.

The admissible loads are valid for operation at 50 Hz; for 60 Hz, please inquire.

The calculation of the admissible axial load was based on the drive with generally available coupling.

For suppliers, see section "Accessories" on page 3/66 in the respective section of the catalog.

Please inquire if the load direction alternates.

1LE10, 1MB10¹⁾, and 1PC10¹⁾ motors in horizontal type of construction – basic version (with the exception of motors with increased power)

The values shown do not assume a cantilever force on the shaft extension.

The admissible loads are valid for operation at 50 Hz; for 60 Hz, please inquire.

The calculation of the admissible axial load was based on the drive with generally available coupling.

For suppliers, see the section "Accessories" on page 3/66.

Please inquire if the load direction alternates.

1MB5 motors for Ex db, Ex db eb with a vertical type of construction – basic version

For frame sizes > 250 standard version.

Overview

The drainage of condensed water is an important aspect of proper motor maintenance.

Drainage of condensed water is made easy by rotating the outer cap.

If there are condensation drain holes present, these must be opened at regular intervals, depending on climatic conditions and in accordance with the motor operating instructions.

"Modifiable T-Drain" is closed on delivery of the motor and corresponds to IP55/IP56 degree of protection.

When opened, it corresponds to IP45/IP46 degree of protection. The opened T-Drain can be used for continuous drainage of condensed water in environments with low amounts of dust.

**Note:**

Condensation drain holes are not possible in motors with the types of protection Ex db and Ex db eb.

A screwed-on cover (made of sheet metal or plastic depending on the shaft height) is included as standard for horizontal types of construction and types of construction with shaft pointing upwards (14th position of the Article No. letter **A, T, U, V, D, F, H, J, K, L, N**) in combination with condensation drainage holes, order code (**H03**) to facilitate assembly/disassembly.

When the motors are used or stored outdoors, we recommend that they be kept under some sort of additional cover so that they are not subjected to direct intensive solar radiation, rain, snow, ice or dust over a long period of time. In such cases, technical consultation may be appropriate.

When the motors are used outdoors or in a corrosive environment, it is recommended that non-rusting screws are used externally.

Order code **H07**

Vibration-proof version

Continuous vibration resistance to class 3M4 according to IEC 721-3-3:1994 (order code **H02** in combination with order code **G04, G05, G06, G11, and G12** or **F70** on request only).

Order code **H02**

For availability of individual options for the relevant motor series, see section "Special versions" in the respective sections of the catalog.

Introduction

Lifting eyes and transport

Overview

1LE10, 1MB10 and 1PC10 motors without feet have four cast lifting eyes as standard, each offset by 90°; in the case of screwed-on feet, two lifting eyes are covered by the feet, so in this case only two lifting eyes are available for use. This data is only valid up to frame size 200.

Housing material			
Motor series	Frame size	Housing material	Housing feet
1LE10, 1PC1 ²⁾	63 ... 160	Aluminum alloy	cast ¹⁾
	180 ... 200	Aluminum alloy	screwed on ¹⁾
1MB10	100 ... 160	Aluminum alloy	cast ¹⁾
1LE15 1MB15 1PC1301 ³⁾	71 ... 315	Cast iron	cast ¹⁾
1LE5 1MB5	225 ... 450	Cast iron	cast
1LE16 1MB16	100 ... 315	Cast iron	cast ¹⁾

Motor screws:

H06: External screws, bolts and unpainted materials made of stainless steel (V4A) including rating plate, outer screws, grounding, and options with order codes L19, L23, Q01.

H07: Rust-resistant screws (externally) including outer motor screws made of common stainless steel.

H30: Adjustment screws for feet in horizontal installation including 4 threads in the motor feet; adjustment screws not in the scope of supply.

Arrangement of lifting eyes/eyebolts (standard)

Frame size	Terminal box position	Cast-iron motors	Aluminum motors	Arrangement of eyebolts	Thread size
63	–	–	None	–	–
71	–	None	None	–	M8
80	Short housing	None	None	–	M8
	Top (long housing)	Two eyebolts		Left/right center	
	Left/right (long housing)	One eyebolt		Top center	
90	Top	Two eyebolts	None	Left/right center	M8
	Left/right	One eyebolt		Top center	
100		Depending on type of construction ⁴⁾	Lifting eyes	Top; Left DE side/ Right NDE side ¹⁰⁾	M8
112					
132					
160					M10
180		Two eyebolts ¹⁰⁾			M12
200					M16
225		Two eyebolts ¹¹⁾	–	5) 6) 7)	M16
250					M20
280					
315 S/M ¹²⁾					M24
315 L		Four eyebolts		Top;	
315 L (1LE5)		Two eyebolts		Left/right DE and NDE side ^{8) 9)}	M30
355 M/L (1LE5)					
400					
450					

¹⁾ Basic version, cast feet: Special version "Screwed-on feet (instead of cast)" with digits **5**, **6**, and **7** in the 16th position of Article No. or digit **4** with order code **H01**. Screwed-on feet as standard for 1LE10 motors in frame sizes 180 and 200 and motors with increased power.

²⁾ Aluminum motors in frame sizes 80 and 90 and 1PC10 motors in frame sizes 100 to 160 without lifting eyes. Aluminum motors in frame sizes 100 to 200 with cast lifting eyes (does not apply to 1PC10 and 1MB10 motors in frame sizes 180 and 200).

³⁾ 1LE16 motors frame size 100 and above, 1PC1301 motors frame size 180 and above.

⁴⁾ Two eyebolts for
-IM B5, IM B14, IM V1 or
-IM B34, IM B35 with **H01** or left/right, side terminal box position.
Lifting eyes for
-IM B3 or
-IM B34, IM B35 without **H01** or non-side left/right terminal box position.

⁵⁾ For IM B3; IM B5: top; DE side left / NDE side right.
With rotation of the terminal box through 180° (R12): top;
NDE side left / DE side right.

⁶⁾ For IM V1: top; NDE side right; down; NDE side left.

⁷⁾ For IM V3: top; DE side left; down; DE side right.

⁸⁾ For IM V1: NDE side, left/right; top/bottom.

⁹⁾ For IM V3: DE side, left/right; top/bottom.

¹⁰⁾ With rotation of the terminal box through 180° (R12): top;
NDE side left / DE side right.

¹¹⁾ Motors with brakes have four top eyebolts.

For IM V1: NDE side, left/right; top/bottom.

For IM V3: DE side, left/right; top/bottom.

¹²⁾ The assignment 315 L is used for 1000 kg and over.

Overview

Brakes as well as rotary encoders of the "modular and special technology" can be retrofitted. The motor must be prepared for this. This is possible for all 1LE motors (with the exception of 1LE1 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover").

Preparation of the shaft extension at NDE can be ordered with the option "Prepared for mountings, only center hole", order code **G40** for the following frame sizes and mountings:

- _ Frame sizes 80 to 450: brakes with order code **F01** and **F04**
- _ Frame sizes 71 and 90: only rotary encoders with order codes **G11** or **G12** from the "modular technology" range
- _ Frame sizes 100 to 450: all rotary encoders from the "modular and special technology" ranges

Dimensions of center holes

Frame size	Ø	L (drilling depth)
100	16 ^{H7}	34
112	16 ^{H7}	34
132	22 ^{H8}	39
160	28 ^{H8}	42

The length of the motor does not change because the shaft extension is still under the fan cover.

For motors ordered with order code **G40**, the following conversion combinations are possible:

- _ Frame sizes 71 and 90:
either brakes with order code **F01** and **F04** or rotary encoders from the "modular technology" range. The combination of brake (**F01**) and rotary encoder is not possible.
- _ Frame sizes 100 to 450:
Brakes with order code **F01** or rotary encoders from the "modular and special technology" range. The combination of brake (**F01**) and rotary encoder is possible.

Conversion is performed exclusively by the authorized contractual partners of Innomotics.

For motors of series 1LE15, 1LE16, and 1LE5 frame sizes 100 to 450, grounding brushes are available for converter operation. Order code **L52**. Please contact your local Innomotics office for advice.

For mountings, such as rotary encoders, supplied by the customer, the following applies:

For the Sendix 5020 rotary encoders, order code **G11** and **G12**

from the "modular technology" this preparation of the shaft extension on NDE can be ordered with the option "Prepared for mounting with shaft D12".

Order code **G41**

The length of the motor increases by Δl due to order code **G41**.

For an explanation of the additional dimensions and weights, see "Modular technology" "Dimensions and weights".

For the rotary encoders:

- _ LL 861 900 220, order code **G04**
- _ HOG 9 DN 1024 I, order code **G05**
- _ HOG 10 D 1024 I, order code **G06**

from the "special technology" this preparation of the shaft extension on NDE can be ordered with the option "Prepared for mounting with shaft D16" for motors of frame sizes 100 to 160 only.

Order code **G42**

The length of the motor increases by Δl due to order code **G42**.

For an explanation of the additional dimensions and weights, see "Modular technology" "Dimensions and weights" from page 1/130.

Motors that are prepared for mountings supplied by the customer (order codes **G41**, **G42**) are supplied without a protective cover as standard. These mountings can be installed by the customer.

If a protective cover is requested as a cover or mechanical protection for mountings provided by the customer, this can be ordered with order code **G43**.

This protective cover is designed and mounted differently as described below according to frame size:

Frame sizes 71 to 90 and 180 to 200:

Motors ordered with order code **G43** are fitted as standard with a screwed-on cover (made of sheet metal or plastic depending on shaft height). The protective cover is mounted in the factory. To install the mountings supplied by the customer, the protective cover must be removed beforehand by unscrewing the external fixing screws and reattached afterwards. Protective covers for motors of these frame sizes are not suitable for mountings that correspond to the shape and size of the rotary encoders of the "special technology" (**G04**, **G05**, **G06**, see above).

Frame sizes 100 to 450:

The protective cover must be installed by the customer in accordance with the assembly instructions supplied. It has supports of varying length that can be used for installation according to the height of the planned mountings.

The standard protective cover (order code **H00**) is not suitable for protection of additional mountings, such as rotary encoders.

Order codes **G40**, **G41**, **G42** are not possible in conjunction with order code **L00** – vibration severity grade B.

Order code **G43** is only appropriate in combination with order codes **G41** and **G42**, and not in combination with **G40**.

Introduction

Modular technology

Overview

The 1LE and 1FP motors (with the exception of 1LE1 and 1LE5 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover" and 1PC1) can be used in a much wider range of applications (e.g. as motors with brakes) if the following modules are mounted:

- _ Separately driven fan
- _ Brake
- _ Rotary pulse encoder

The brake must always be mounted in the factory for safety reasons. The rotary pulse encoder and/or the separately driven fan can also be retrofitted.

The degree of protection of the motors with modular technology is IP55. Higher degrees of protection on request.

Attaching rotary pulse encoder, brake, and separately driven fan increases the length of the motor by dimension Δ . For explanations of the additional dimension and weights, see "Mounting technology" and "Dimensions and weights" from page 1/130.

Separately driven fan

The use of a separately driven fan is recommended to increase motor utilization at low speeds and to limit noise generation at speeds significantly higher than the synchronous speed. Both of these results can only be achieved with converter operation. Please inquire about traction and vibratory operation.

The separately driven fan can be supplied already fitted, order code **F70**. There is no automatic adjustment of the voltage for the separately driven fan when ordering a "special voltage" for the motor. This must be specified in addition using the **Y81** option.

It can also be ordered separately and retrofitted. For selection information and article numbers, see the section "Accessories" (available soon). A rating plate listing all the important data is fitted to the separately driven fan. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it. Admissible coolant temperatures $CT_{min} -25\text{ °C}$, $CT_{max} +65\text{ °C}$ ¹⁾, for frame sizes 400 and 450 coolant temperatures $CT_{min} -30\text{ °C}$, $CT_{max} +40\text{ °C}$, lower/higher coolant temperatures are available on request.

When the separately driven fan is mounted, the length of the motor increases by Δ . For explanations of the additional dimension and weights, see "Mounting technology" and "Dimensions and weights" from page 1/130.

Technical specifications of separately driven fans (according to tolerances of EN 60034-1)

Motor series	Frame size	Rated voltage range		Frequency Hz	P_{max} kW	I_{max} A

Brakes

The brakes with order code **F01** (**F02** brake for increased frequency of operation for Innomatics GP motors on request) are designed to be spring-operated brakes. When the brake is ordered, the supply voltage must be specified. For an explanation of the supply voltage, see the descriptions of each brake model in "Modular technology".

For the design of the braking time, run-on revolutions, braking energy per braking procedure as well as the lifetime of the brake linings, see "Configuration of motors with brakes" on page 1/109.

When a brake is mounted, the length of the motor increases by Δl . For explanations of the additional dimension and weights, see "Mounting technology" and "Dimensions and weights" from page 1/130.

*The brake can be retrofitted by authorized partners. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only" order code **G40** must be specified (see "Mechanical version and degrees of protection" on page 1/95).*

Ambient temperature

- _ -40 °C to +45 °C (with nominal excitation) for SFB-SH brake
- _ -40 °C to +75 °C (with double excitation) for SFB-SH brake
- _ -20 °C to +40 °C holding/operating brake (standard BFK458)
- _ up to +60 °C only as holding brake
- _ -20 °C to +60 °C holding/operating brake only for FDX brake
- _ -30 °C to +60 °C holding/operating brake only for KFB brake

Definition of duty type

_ Operating brake:

The motor shaft can be braked from full operating speed down to zero speed of the motor. All the kinetic energy produced by the drive train is converted to heat by friction during braking. Braking energy is produced at $n > 0$ rpm. The maximum permissible switching frequency must be taken into account. When this brake is used, installation of a separately driven fan is recommended in order to ensure adequate cooling when the motor is at a standstill. The operating brake is also capable of functioning as a holding brake.

_ Holding brake:

The purpose of braking or "holding" the motor shaft is merely to suppress unintended rotation caused by externally applied torque forces, e.g. when a load is suspended from a crane rope drum. The holding brake is primarily deployed when the motor is at a standstill ($n = 0$ rpm) by holding the motor shaft or is close to $n = 0$ rpm and coasting down to a standstill. As a result, no additional braking energy or braking heat is transferred to the motor.

Note:

A holding brake must not be used as an operating brake as it could then cause danger to life and damage to property.

Bridge rectifier / half-wave rectifier

Brakes are connected through a standard bridge or half-wave rectifier or directly to the BFK458-/SFB-SH brake. See the circuit diagrams below.

Half-wave rectifier 400 V AC

Rectifier bridge 230 V AC

Brake connection for 24 V DC

Introduction

Modular technology

Overview

BFK458 spring-operated disk brake

Motor series

1

This brake is the standard brake for 1LE1/1FP1 motors in frame sizes 63 to 225 (except for 1LE1 with order code **F90** version "Forced-air cooled motors without external fan and fan cover").

Other characteristics of the BFK458 brake

The BFK458 brake has IP55 degree of protection.

Please inquire if motors with brakes are to be operated below the freezing point or in conjunction with very humid environments (e.g. close to the sea) with long standstill times. Please also inquire if motors with brakes are to be used for low-speed converter operation.

Design and mode of operation

The brake takes the form of a single-disk brake with two friction surfaces.

The braking torque is generated by friction when pressure is applied by one or more pressure springs in the de-energized state. The brake is released electromagnetically.

When the motor brakes, the rotor which can be axially shifted on the hub or the shaft is pressed via the armature disk against the friction surface by means of the springs. In the braked state, there is a gap S_{Gap} between the armature disk and the solenoid component. To release the brake, the solenoid is energized with DC voltage. The resulting magnetic force pulls the armature disk against the spring force on to the solenoid component. The spring force is then no longer applied to the rotor, which can rotate freely.

Design of the BFK458 spring-operated disk brake

Rating plate

The following brake data is specified on the motor rating plate:

- _ Brake type
- _ Supply voltage
- _ Frequency
- _ Current
- _ Temperature class
- _ Braking torque

Voltage and frequency

The solenoids and the brake rectifier are designed for connection to the following voltages or can be supplied for the following voltages:

- _ Brake supply voltage 24 V DC
Order code **F10**
- _ Brake supply voltage 230 V AC
Order code **F11**
- _ Brake supply voltage 400 V AC
(directly at the terminal strip)
Order code **F12**
- _ Brake supply voltage 180 V DC
Order code **F17**
- _ Brake supply voltage 205 V DC
Order code **F18**

When 60 Hz is used, the voltage for the brake must not be increased!

Order codes **F10, F11, F12, F17, and F18** must only be used in conjunction with order code **F01**

Lifetime of the brake lining

The braking energy L_N until readjustment of the brake depends on various factors. The main influencing factors include the masses to be braked, the operating speed, the switching frequency, and therefore the temperature at the frictional surfaces. This means it is not possible to specify a value for the friction energy until readjustment that is valid for all operating conditions.

When used as an operating brake, the specific frictional surface wear (wear volume for the frictional work) is approximately 0.05 to $2 \text{ cm}^3/\text{kWh}$.

						AC 400	0.61							
						DC 24	4.6							

¹⁾ For 400 V AC and for 24 V DC, the power can deviate by up to +10 % as a function of the selected supply voltage.

²⁾ The specified switching times are valid for switching on the DC side with a rated release travel and with the coil already warm. They are average values, which may vary depending on factors such as the rectifier type and the release travel. The brake application time for switching on the AC side, for example, is approximately 6 times longer than for switching on the DC side.

³⁾ Not possible in combination with order code **D02** and **D03** for SH225.

Introduction

Overview

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

For motor frame size	Brake type	Maximum admissible speeds			Changing the braking torque			Readjusting the air gap

Overview

Changing the braking torque

The brake is supplied with the braking torque already set. For BFK458 brakes, the torque can be reduced to dimension O_1 by unscrewing the adjusting ring with a hook wrench. The braking torque changes by the values shown in the above table for each notch of the adjusting ring.

Readjusting the air gap

Under normal operating conditions, the brake is practically maintenance-free. The air gap S_{Gap} must only be checked at regular intervals if the application requires an extremely large amount of frictional energy and readjusted to the rated air gap $S_{Gap\ rated}$ at the latest when the maximum air gap $S_{Gap\ max}$ is reached.

Connection

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

The AC voltage for the brake excitation winding is connected to the two free terminals of the rectifier block (~).

The brake can be released when the motor is at a standstill by separately exciting the solenoid. In this case, an AC voltage must be connected at the rectifier block terminals. The brake remains released as long as this voltage is present.

The rectifiers are protected against overvoltages by varistors in the input and output circuits.

For 24 V DC brakes, the brake terminals are directly connected to the DC voltage source.

For this purpose, see the circuit diagrams on page 1/97.

Fast brake application

If the brake is disconnected from the line supply, the brake is applied. The application time for the brake disk is delayed as a result of the inductance of the solenoid (shutdown on the AC side). This results in a considerable delay before the brake is mechanically applied. In order to achieve short brake application times, the circuit must be interrupted on the DC side.

To realize this, the wire jumpers, located between contacts 1+ and 2+ at the rectifier, are removed and replaced by the contacts of an external switch.

For this purpose, see the circuit diagrams on page 1/97.

Mechanical manual brake release with lever

The brakes can be supplied with a mechanical manual release with lever.

Order code **F50**

The dimensions of the brake lever depend on the motor frame size and can be read from the dimensional drawing generator for motors in the Innomotics Configurator tool for low-voltage motors.

Introduction

Overview

KFB spring-operated brake

1

KFB spring-operated brake

The KFB solenoid double-disk spring-operated brake is a safety brake that brakes the motor if the supply is disconnected (power failure, emergency stop). The KFB brake with IP67 degree of protection is mainly used for electric motors for traversing, cross-traversing and lifting gear in cranes as well as for special industrial applications.

Motor series

This brake is the standard brake for 1LE1 motors in frame sizes 250 to 315. For frame sizes 180 to 225, apart from the standard brake BFK458, KFB brakes can also be supplied. Special brake selections are available on request.

Design and mode of operation

When the brake current is switched on, an electromagnetic field develops which overcomes the spring force of the brake. The corresponding modules, including the motor shaft, can rotate freely. The brake is released. If the brake current is switched off or if there is a power failure, the electromagnetic field of the brake disappears. The mechanical braking energy is transferred to the motor shaft. The motor is braked.

Design of KFB spring-operated brakes

Other characteristics of the KFB brake

- _ High degree of protection IP67.
- _ Corrosion-resistant in seawater and in the tropics.
- _ The brake is a dynamic brake, not simply a holding brake. For this reason there is less wear, especially in the case of emergency stops (commissioning).
- _ High wear reserves – repeated stepless air gap readjustment is possible. This results in extremely long operating times and low service and operating costs.
- _ The function and wear can be monitored with microswitches and proximity switches. Microswitch On/Off is standard for 1LE motors, frame size 250 to 315. Microswitch On/Off is not standard for 1LE motors, frame size up to 225. Anti-condensation heating is possible as an option.
- _ Fully functional brake for housing acceptance test. Visual inspection of brake is possible during operation.
- _ The brake (air gap) can be adjusted in the factory, for example, and mounted on the drive motor without further adjustments.
- _ The wearing parts can be replaced without great effort. After the housing has been opened (three screws), it is easy to replace the friction plate. It is not necessary to disassemble the entire brake.

Overview

Voltage and frequency

The solenoids and the brake rectifier can be connected to the following voltages: 1 AC 50 Hz 230 V $\pm 10\%$

When 60 Hz is used, the voltage for the brake must not be increased!

The brake can also be supplied for other voltages:

- _ Brake supply voltage: 24 V DC
Order code **F10**
- _ Brake supply voltage: 230 V AC
Order code **F11**
- _ Brake supply voltage: 400 V AC
(directly at the terminal strip)
Order code **F12**

Order codes **F10** and **F12** may only be used in conjunction with order code **F01**.

Fast brake application

Not available for the KFB brake.

Mechanical manual brake release with lever

The brake can be released manually with screws as standard. Mechanical manual release with a lever can be ordered with order code **F50**.

The dimensions of the brake lever depend on the motor frame size and can be read from the dimension sheet generator for motors in the Innomotics Configurator tool for low-voltage motors. Up-to-date data are available from the brake manufacturer.

Introduction

Modular technology

Overview

Connection

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

KFB brakes are connected through a standard bridge or half-wave rectifier.

A special circuit is not required. Optimal switching times are achieved without the need to use special circuits.

For this purpose, see the circuit diagrams on page 1/97.

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

Introduction

Overview

SFB-SH solenoid double-disk spring-operated brake

Motor series

1

This brake is the standard brake for 1LE5 motors in frame sizes 315 to 355.

Special brake selections are available on request.

SFB-SH solenoid double-disk spring-operated brake

SFB-SH solenoid double-disk spring-operated brakes are safety brakes that are mechanically operated on a power failure. This ensures that the brake still works during a power failure. These brakes are designed for dry running, must only ever be operated in a safe state, and only installed, commissioned, operated, and maintained by specially trained installation personnel. The brakes of the SFB-SH type series have an increased braking torque due to use of a different friction material and are used for emergency stops as a dynamically loaded brake with a safety margin.

Other characteristics of the SFB-SH brake

- _ High degree of protection IP67.
- _ Corrosion-resistant in seawater and in the tropics.
- _ High wear margins - simple air-gap adjustment. This results in extremely long operating times and low service and operating costs.
- _ The function and wear can be monitored with microswitches and proximity switches. Microswitch On/Off is standard for 1LE5 motors. Anti-condensation heating is possible as an option.
- _ Fully functional brake for housing acceptance test. Visual inspection of brake is possible during operation.
- _ The brake (air gap) can be adjusted in the factory, for example, and mounted on the drive motor without further adjustments.
- _ The wearing parts can be replaced without great effort. After the housing has been opened (three acorn nuts), it is easy to replace the friction plate. It is not necessary to disassemble the entire brake.

Design and mode of operation

When the brake current is switched on, an electromagnetic field develops which overcomes the spring force of the brake. The corresponding modules, including the motor shaft, can rotate freely. The brake is released. If the brake current is switched off or if there is a power failure, the electromagnetic field of the brake disappears. The mechanical braking energy is transferred to the motor shaft. The motor is braked.

Design of the SFB-SH solenoid double-disk spring-operated brake

Voltage and frequency

The solenoids and the brake rectifier can be connected to the following voltages:

1 AC 50 Hz 230 V $\pm 10\%$

When 60 Hz is used, the voltage for the brake must not be increased!

The brake can also be supplied for other voltages:

- _ Brake supply voltage: 24 V DC
Order code **F10**
- _ Brake supply voltage: 230 V AC
Order code **F11**
- _ Brake supply voltage: 400 V AC
(directly at the terminal strip)
Order code **F12**

Order codes **F10** and **F12** may only be used in conjunction with order code **F01**.

Overview**Connection**

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

The AC voltage for the brake excitation winding is connected to the two free terminals of the rectifier block (~). The rectifier is located in the main terminal box and must be connected in the customer's switchboard.

The brake can be released when the motor is at a standstill by separately exciting the solenoid. In this case, an AC voltage must be connected at the rectifier block terminals. The brake remains released as long as this voltage is present.

For 24 V DC brakes, the brake terminals are directly connected to the DC voltage source.

For this purpose, see the circuit diagrams on page 1/97.

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

¹⁾ External dimension increases to 560 mm.

²⁾ External dimension decreases to 640 mm.

³⁾ The dynamic braking torque also depends on the load data, temperatures in excess of the maximum admissible lining surface temperatures must be avoided.

⁴⁾ Value is guaranteed by the brake manufacturer.
In practice, a higher braking torque can be expected.
Restrictions are determined at the test station of the brake manufacturer.
Information: www.pintschbubbenzer.de

Overview

Configuration of motors with brakes

Braking time

The time it takes the motor to come to a standstill comprises two components:

- The application time of the brake t_2
- The braking time t_{Br}

$$t_{Br} = \frac{J \cdot n_{rated}}{9.55 \cdot (T_B \pm T_L)}$$

t_{Br}	Braking time in s
J	Total moment of inertia in kgm^2
n_{rated}	Rated speed of the motor with brake in rpm
T_B	Rated braking torque in Nm
T_L	Average load torque in Nm (If T_L supports the braking operation, T_L is positive)

Braking energy per braking operation Q_{adm}

The braking energy per braking operation in Nm comprises the energy of the moments of inertia to be braked Q_{kin} and the energy Q , which must be applied in order to brake against a load torque:

$$Q_{adm} = Q_{kin} + Q$$

- The energy of the moments of inertia in Nm

$$Q_{kin} = \frac{J \cdot n_{rated}^2}{182.4}$$

n_{rated}	Rated speed before braking in rpm
J	Total moment of inertia in kgm^2 . The mass moment of inertia J specified in the formula corresponds to the total moment of inertia of all braked masses referred to the motor/brake speed.

- Braking energy on emergency trip

The braking energy for occasional emergency trips must be checked to ensure that it does not cause the brake to overheat. Please refer to table "Technical specifications of brakes" for admissible values. The braking energy produced for traversing gear can be calculated approximately with the following equation:

$$Q = \frac{J_{tot} \cdot n_{Br}^2}{182.4 \cdot 10^3} \cdot \frac{T_{Br}}{T_{Br} \pm T_L}$$

Q	Energy capability/braking energy in kJ
T_{Br}	Braking torque in Nm
T_L	Total of all load torques in Nm referred to the brake (motor) shaft
n_{Br}	Speed of brake (motor) shaft in rpm
J_{tot}	Total moment of inertia to be braked in kgm^2 reduced to the brake (motor) shaft
T_L	is positive if it supports braking (e.g. hoisting a load)
T_L	is negative if it counteracts braking (e.g. lowering a load)

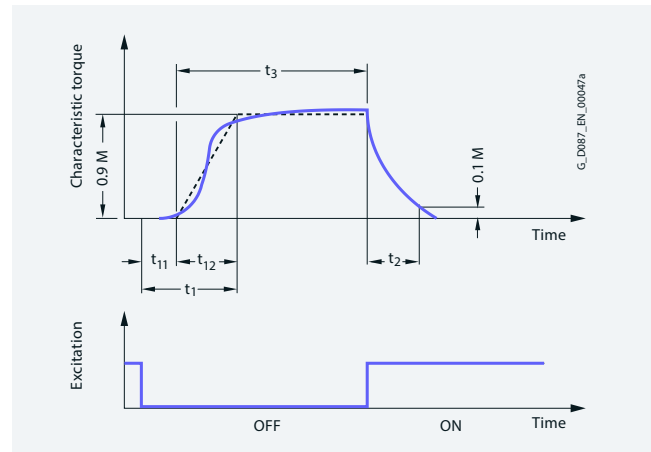

The total moment of inertia J_{tot} is the sum of the individual moments of inertia of the system components to be braked, reduced to the brake (motor) shaft, and the moments of inertia of the linear-motion masses. The equivalent mass inertia J_{Eqv} of a linear-motion mass m with velocity v , referred to the brake (motor) speed n_{Br} , is calculated as follows:

$$J_{Eqv} = 91.2 \cdot m \cdot \left(\frac{v}{n_{Br}}\right)^2$$

m	Mass of the linear-motion load in kg
v	Velocity of the linear-motion load in m/s
n_{Br}	Speed of brake (motor) shaft in rpm

The velocity and/or speed to be entered here must equal the maximum values in normal operation. An increase in velocity resulting from wind forces may also need to be taken into account.

Definition of switching times (VDI 2241)

Brake switching times

Switching times:

- t_1 Brake application time
- t_2 Disconnection time
- t_3 Slip time
- t_{11} Response delay
- t_{12} Rise time

Introduction

Modular technology

Overview

Run-on revolutions U

The number of run-on revolutions U of the motor with brake can be calculated as follows:

$$U = \frac{n_{\text{rated}}}{60} \left(t_1 + \frac{t_{\text{Br}}}{2} \right)$$

t_1 Brake application time in ms

Lifetime of the brake lining L and readjustment of the air gap

The brake lining wears due to friction which increases the air gap and the release time for the brake at standard excitation.

In order to calculate the lifetime of the brake lining in terms of operations S_{max} , the lifetime of the brake lining L in Nm must be divided by the braking energy Q_{adm} :

$$S_{\text{max}} = \frac{L}{Q_{\text{adm}}}$$

The interval between adjustments N can be calculated in terms of operations by dividing the braking energy L_N that the brake can output until it is necessary to readjust the working air gap by Q_{adm} :

$$N = \frac{L_N}{Q_{\text{adm}}}$$

Overview**FDW/FDX spring-operated brake****Motor series**

This FDW/FDX brake is provided for 1LE1 motors (FDW for frame size 100 to 200; FDX for frame size 225 to 315; 100 to 200 on request).

Mode of operation of FDW/FDX spring-operated brake (holding brake/operating brake)

The solenoid spring-operated brakes (order code **F04**), FDW with IP66 and FDX with IP67 degree of protection, are quiescent current brakes, meaning that the braking torque is produced by spring force and increased by magnetic force in normal operation.

During the braking operation, the built-in compression springs apply pressure to the rotor that interlocks radially with the machine shaft using the axially moving armature disk. In turn, this applies pressure to the opposing side against the friction surface (→ motor label). The braking torque is produced from the linings of the rotor and the armature disk/friction surface being in contact.

During the brake release process, a magnetic force is produced by applying a direct current via the excitation winding in the solenoid. The armature disk is thereby pulled from the solenoid and the rotor is released.

During the manual brake release process (only available for the brake version with manual brake release), the armature disk is pressed mechanically against the solenoid by operating the manual release lever. The brake can therefore still be released in the event of a power failure, for example.

Design of spring-operated brake FDW

Voltage and frequency

The solenoids and the brake rectifier are designed for connection to the following voltages or can be supplied for the following voltages:

_ Brake supply voltage 230 V AC	Order code F11
_ Brake supply voltage 400 V AC	Order code F12
_ Brake supply voltage 180 V DC	Order code F17
_ Brake supply voltage 205 V DC	Order code F18

When 60 Hz is used, the voltage for the brake must not be increased!

Order codes **F11, F12, F17** and **F18** may only be used in conjunction with order code **F04**.

Design of spring-operated brake FDX

Introduction

Modular technology

Overview

Connection

Labeled terminals are provided in the main terminal box of the motor to connect the brake.

The AC voltage for the brake excitation winding is connected to the two free terminals of the rectifier block (~).

The brake can be released when the motor is at a standstill by separately exciting the solenoid. In this case, an AC voltage must be connected at the rectifier block terminals. The brake remains released as long as this voltage is present.

The rectifiers are protected against overvoltages by varistors in the input and output circuits. The function and wear can be monitored with microswitches and proximity switches. Microswitch On/Off is standard for 1LE1 motors (only possible for FDW spring-operated brake). Anti-condensation heating is possible as an option.

Mechanical manual brake release with lever

The brake can be supplied with a mechanical manual release with lever.

Order code **F50**

The dimensions of the brake lever depend on the motor frame size and can be read from the dimensional drawing generator for motors in the Innomotics Configurator tool for low-voltage motors.

configurator.innomotics.com

Ambient temperature and operating mode of brake (only for FDW spring-operated brake):

- _ - 20°C ≥ 40°C no action required
- _ - 20°C ≥ 60°C S3/60% or power reduction with fast excitation rectifier
- _ - 20°C ≥ 80°C S3/60% and power reduction with fast excitation rectifier
- _ under - 20°C heating necessary

Accessories

- _ microswitches
- _ heating
- _ paint finish up to C3
- _ special fast response rectifier is needed (due to higher temperatures)

Lifetime

The amount of frictional energy that can be transferred before the rotor must be replaced depends on various factors:

- _ Mass to be decelerated
- _ Switching frequency
- _ Speed
- _ Resulting temperature on the friction surfaces

As a result, only guide values can be specified for the frictional energy to be transferred until rotor replacement.

Abbreviations and definitions used (with their units):

T_{LR}	= Motor starting torque (Nm)
T_b	= Braking torque (Nm)
T_{breq}	= Required braking torque (Nm)
$T_{b, rated}$	= Rated torque of the spring-operated brake (Nm)
T_L	= Load torque (Nm)
T_{tot}	= Total torque (Nm)
F	= Force (N)
r	= Lever arm (m)
n	= Speed (rpm)
K	= Safety factor $K \geq 2$
P	= Power (kW)
t	= Overall braking time (ms)
t_{st}	= Startup time (s)
t_B	= Braking time (s)
t_2	= Disconnection time (ms)
t_1	= Application time (ms)
t_{11}	= Response delay (ms)
P_R	= Frictional power (J/s)
W_R	= Friction energy (J)
S	= Switching cycles (brake operations) per second (Hz)
J_E	= Internal moment of inertia (kgm ²)
J_{add}	= Additional moment of inertia (kgm ²)
$J_{2,3..}$	= Moment of inertia (kgm ²)
J_{tot}	= Total moment of inertia (kgm ²)
n_1	= Motor speed (rpm)
$n_{2,3..}$	= Speeds (rpm)

Multiple moments of inertia with different speeds are converted into a moment of inertia relative to the motor shaft:

$$J_{add} = \frac{J_2 \cdot n_2^2 + J_3 \cdot n_3^2 \dots}{n_1^2} \text{ (kgm}^2\text{)}$$

Torque

A spring-operated brake is designed mainly in accordance with the required braking torque T_{breq} . If the moment of inertia, speed, and admissible braking time of the machine are known, the braking torque of the spring-operated brake can be calculated. If the masses that are to be decelerated by the spring-operated brake are running at a different speed from the shaft decelerated by the spring-operated brake, the moment of inertia of these masses (J_{add}) must be calculated relative to this shaft (see above). In addition, the moment of inertia of the rotor-hub system (J_E) must be taken into account.

Overview**Load torque** (static loading)

Torque which is present when the system is at a standstill and must be held by the brake. The loading force is converted into the load torque via the relevant lever arm:

$$T_L = F \cdot r \text{ (Nm)}$$

Braking torque (dynamic loading)

A purely dynamic load is present when flywheels, rollers, etc., are to be delayed and the static load torque is negligibly small.

The required braking torque is calculated as follows:

$$T_b = 1.046 \cdot 10^2 \cdot J_{\text{tot}} \cdot \frac{n}{t - t_1} \text{ (Nm)}$$

$$T_{\text{breq}} = T_b \cdot K \leq T_{b, \text{rated}} \text{ (Nm)}$$

Dynamic and static loading

Most applications involve dynamic loading as well as static load torque:

$$T_{\text{breq}} = (T_b \pm T_L) \cdot K \text{ (Nm)}$$

$$T_{\text{breq}} = (1.046 \cdot 10^2 \cdot J_{\text{tot}} \cdot \frac{n}{t - t_1} \pm T_L) \cdot K \text{ (Nm)}$$

$$T_{\text{breq}} \leq T_{b, \text{rated}} \text{ (Nm)}$$

Sign for T_L :

+ T_L = Load torque is applying force (in the direction of motion)

- T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

If both cases occur, the specific configuration is always adapted to the larger torque.

Approximate determination of T_{breq}

If the moment of inertia is not known and if the input power has been defined, the required braking torque is determined as follows:

$$T_{\text{breq}} = 9.55 \cdot 10^3 \cdot \frac{P}{n} \cdot K \leq T_{b, \text{rated}} \text{ (Nm)}$$

$$K \geq 2$$

Introduction

Overview

Braking time

General information

$$t = 1.046 \cdot 10^2 \cdot J_{\text{tot}} \cdot \frac{n}{T_{\text{b, rated}} \pm T_L} + t_1 \quad (\text{ms})$$

Sign for T_L :

- T_L = Load torque is applying force (in the direction of motion)
- + T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

Calculation of the starting and braking time for motors

Startup time for motors with brakes

$$t_{\text{st}} = J_{\text{tot}} \cdot \frac{n_1}{9.55 \cdot (T_{\text{LR}} \pm T_L)} + \frac{t_2}{1000} \quad (\text{s})$$

$$J_{\text{tot}} = J_E + J_{\text{add}} \quad (\text{kgm}^2)$$

Sign for T_L :

- + T_L = Load torque is applying force (in the direction of motion)
- T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

Braking time for motors with brakes

$$t_B = J_{\text{tot}} \cdot \frac{n_1}{9.55 \cdot (T_{\text{b, rated}} \pm T_L)} + \frac{t_1}{1000} \quad (\text{s})$$

Sign for T_L :

- T_L = Load torque is applying force (in the direction of motion)
- + T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

Thermal load

When braking, friction energy is applied during the slip phase, which releases thermal energy.

Friction energy per braking operation

$$W_R = J_{\text{tot}} \cdot n^2 \cdot \frac{T_{\text{b, rated}}}{182.5 \cdot (T_{\text{b, rated}} \pm T_L)} \quad (\text{J})$$

Sign for T_L :

- T_L = Load torque is applying force (in the direction of motion)
- + T_L = Load torque is applying a decelerating force (opposite to the direction of motion)

The friction energy per braking operation must be no greater than the admissible value $W_{R\text{max}}$

$$W_R \leq W_{R\text{max}} \quad (\text{J})$$

Frictional power

$$P_R = W_R \cdot S \quad (\text{J/s})$$

The friction energy must be no greater than the admissible value $P_{R\text{max}}$

$$P_R \leq P_{R\text{max}} \quad (\text{J/s})$$

Connection

Load rating of the rectifier diodes as a function of the ambient temperature:

Block diagram:

The high-speed rectifier performs the following functions:

- The coil is first supplied with a voltage $U_2 = 0.9 \times U_1$: Over-excitation of the brake
- After excitation time t_1 the voltage is reduced to $U_3 = 0.45 \times U_1$: Non-release voltage of the brake

Designation	Supply voltage (V AC)	Output voltage (V DC)		Ambient temperature
Article No.:	U_1 at 50/60 Hz	U_2	U_3	°C
PMG 480	215 ... 500	$0.9 \times U_1$	$0.45 \times U_1$	-15 ... +80

Overview

Maximum admissible speeds

The maximum admissible speeds from which emergency stops can be made are listed in the next table. These speeds should be considered as guide values and must be checked for the specific operating conditions.

The maximum admissible friction energy depends on the switching frequency and is shown for the individual brakes in the following diagram. Increased wear can be expected when the brakes are used for emergency stops.

Introduction

Special technology

Overview

"Special technology" comprises rotary pulse encoders of 1LE1 motors (with the exception of 1LE1 with order code **F90** – version "Forced-air cooled motors without external fan and fan cover" and 1PC1).

1LE1 motors with order codes **F70** (mounting of separately driven fan), **F01** (mounting of holding brake (standard arrangement)) and **F01 + F70** (mounting of brake and separately driven fan) from the modular mounting concept can be combined with rotary pulse encoders LL 861 900 220, HOG 86E TP DN 1024, HOG 9 DN 1024 I and HOG 10 D 1024 I from the "Special technology" range.

The length of the motor increases by Δl when the rotary pulse encoder is mounted. For an explanation of the additional dimensions and weights, please refer to "Mounting technology", "Dimensions and weights" from page 1/130.

The rotary pulse encoders of "Modular technology" and "Special technology" are fitted as standard with a protective cover made of non-corrosive sheet steel.

For mounting of rotary pulse encoders with order codes **G11** and **G12** for frame sizes 71 to 315 and with order codes **G03**, **G04**, **G05**, and **G06** up to frame size 160, a protective cover (order code **G43**) is supplied as standard.

For frame size 180 and above, a protective cover is not supplied as standard when rotary pulse encoders are mounted for order codes **G03**, **G04**, **G05**, **G06**, **G07** and **G08**.

For mounting of rotary pulse encoders with order codes **G11**, **G12 + F70** (mounting of separately driven fan): The cable end is connected to a connector that is located outside the fan cover. The fan cover does not have to be removed to connect the rotary pulse encoder. The rotary pulse encoder can be connected to the main terminal box or an auxiliary terminal box where necessary.

For mounting of rotary pulse encoders with order codes **G03**, **G04**, **G05**, **G06 + F70** (mounting of separately driven fan):

- Up to frame size 200, the fan cover has to be removed to connect the rotary pulse encoder. The rotary pulse encoder can also be connected to the main terminal box or an auxiliary terminal box where necessary.
- As of frame size 225, the fan cover does not have to be removed to connect the rotary pulse encoder. The rotary pulse encoder can be connected to the main terminal box and can be connected to the auxiliary terminal box where necessary.

Overview**LL 861 900 220 rotary pulse encoder**

With its rugged construction, this rotary pulse encoder is also suitable for difficult operating environments. It is resistant to shock and vibration and has insulated bearings.

The LL 861 900 220 rotary pulse encoder can be supplied already mounted.

Order code **G04**

*The LL 861 900 220 rotary pulse encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only", order code **G40**, or the option "Prepared for mountings with shaft D16", order code **G42**, must be specified (see "Mechanical version and degrees of protection" on page 1/95). The rotary pulse encoder is not part of the scope of supply in this case.*

The version of the rotary pulse encoder with a diagnostics system (ADS) can be supplied by Leine and Linde.

Mounting dimensions of LL 861 900 220 rotary pulse encoder

Technical specifications for LL 861 900 220 (HTL version)

Mounting of encoder for temperatures below $-20\text{ }^{\circ}\text{C}$ and higher than $+40\text{ }^{\circ}\text{C}$ available on request.

Supply voltage U_B	+9 V to +30 V
Current input without load	max. 80 mA
Admissible load current per output	40 mA
Pulses per revolution	1024
Outputs	6 short-circuit proof square-wave pulses A, A', B, B', O, O'
Pulse offset between the two outputs	$90^{\circ} \pm 25^{\circ}$ el.
Output amplitude	$U_{\text{High}} > 20\text{ V}$ $U_{\text{Low}} < 2.5\text{ V}$
Mark space ratio	$1:1 \pm 10\%$
Edge steepness	50 V/ μs (without load)
Maximum frequency	100 kHz for 350 m cable
Maximum speed	4000 rpm
Temperature range	-20 to $+80\text{ }^{\circ}\text{C}$
Degree of protection	IP65
Maximum adm. radial cantilever force	300 N
Maximum adm. axial force	100 N
Connection system	Terminal strips in encoder cable connection M20 \times 1.5 radial
Weight	approx. 1.3 kg

Introduction

Overview

HOG 9 DN 1024 I rotary pulse encoder

1

The encoder is fitted with insulated bearings.

The HOG 9 DN 1024 I rotary pulse encoder can be supplied already mounted.

Order code **G05**

*The HOG 9 DN 1024 I rotary pulse encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only", order code **G40**, or the option "Prepared for mountings with shaft D16", order code **G42**, must be specified (see "Mechanical version and degrees of protection" on page 1/95). The rotary pulse encoder is not part of the scope of supply in this case.*

Mounting dimensions of POG 9 rotary pulse encoder

Technical specifications for POG 9

Mounting of encoder for temperatures below $-20\text{ }^{\circ}\text{C}$ and higher than $+40\text{ }^{\circ}\text{C}$ available on request.

Supply voltage U_B	+9 V to +30 V	+5 V $\pm 5\%$
Current input without load	< 100 mA	
Admissible load current per output	60 mA average 300 mA peak	25 mA average 75 mA peak
Pulses per revolution	300 ... 2500	
Output amplitude	$U_{\text{high}} \geq U_B - 3.5\text{ V}$ $U_{\text{low}} \leq 1.5\text{ V}$	$U_{\text{high}} \geq 2.5\text{ V}$ $U_{\text{low}} \leq 0.5\text{ V}$
Mark space ratio	1:1 $\pm 20\%$	
Operating speed	$\leq 12000\text{ rpm}$	
Switching rate	120 kHz	
Temperature range	$-30\text{ to }+100\text{ }^{\circ}\text{C}$	
Degree of protection	IP56	
Maximum adm. radial cantilever force	150 N	
Maximum adm. axial force	80 N	
Connection system	Terminal box	
Weight	approx. 1.4 kg	

Overview**POG 10 DN 1024 I rotary pulse encoder**

The POG 10 DN 1024 I rotary pulse encoder can be supplied already mounted.

Order code **G07**

*The POG 10 DN 1024 I rotary pulse encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only", order code **G40**, or the option "Prepared for mountings with shaft D16", order code **G42**, must be specified (see "Mechanical version and degrees of protection" on page 1/95). The rotary pulse encoder is not part of the scope of supply in this case.*

Introduction

Overview

HOG 10 D 1024 I rotary pulse encoder

1

This encoder is extremely rugged and is therefore suitable for difficult operating conditions. It is fitted with insulated bearings.

The HOG 10 D 1024 I rotary pulse encoder can be supplied already mounted.

Order code **G06**

*The HOG 10 D 1024 I rotary pulse encoder can be retrofitted. The motor must be prepared for this. When the motor is ordered, the option "Prepared for mountings, center hole only", order code **G40**, or the option "Prepared for mountings with shaft D16", order code **G42**, must be specified (see "Mechanical version and degrees of protection" on page 1/95). The rotary pulse encoder is not part of the scope of supply in this case. The letters FSL and ESL stand for the following terms:
FSL: (mechanical) centrifugal switch
ESL: electronic speed switch
 Both switch types are suitable for tripping the motor when a critical limit speed is reached, or for accelerating the motor along a control ramp into the permissible speed range again, or for shutting down the motor completely (depending on the customer application).
 The electronic speed switch is particularly suitable for converter operation.
 The critical limit rotational speed to be monitored for the customer's application must be specified in the order.
 Further settings might also be necessary. These settings will be made at the Baumer & Hübner factory according to customer specifications.*

Mounting dimensions of HOG 10 D 1024 I rotary pulse encoder

Technical specifications for HOG 10 D 1024 I (HTL version)

Mounting of encoder for temperatures below $-20\text{ }^{\circ}\text{C}$ and higher than $+40\text{ }^{\circ}\text{C}$ available on request.

Supply voltage U_B	+9 V to +30 V
Current input without load	approx. 100 mA
Admissible load current per output	600 mA, 300 mA peak
Pulses per revolution	1024
Outputs	4 short-circuit proof square-wave pulses A, B and A', B'
Pulse offset between the two outputs	$90^{\circ} \pm 20\%$
Output amplitude	$U_{\text{High}} \geq U_B - 3.5\text{ V}$ $U_{\text{Low}} \leq 1.5\text{ V}$
Mark space ratio	$1:1 \pm 20\%$
Edge steepness	$10\text{ V}/\mu\text{s}$
Maximum frequency	120 kHz
Maximum speed	7000 rpm
Temperature range	$-40\text{ to }+100\text{ }^{\circ}\text{C}$
Degree of protection	IP66
Maximum adm. radial cantilever force	150 N
Maximum adm. axial force	80 N
Connection system	Terminals, cable connection M20 x 1.5
Mech. version acc. to Baumer Hübner Ident. No.	74 055 B
Weight	approx. 1.6 kg

Overview

Sendix 5020 rotary pulse encoder

The Sendix 5020 rotary pulse encoder can be ordered completely assembled as an HTL version with order code **G11** or as a TTL version with order code **G12**.

Features of the **G11** and **G12** encoders:

- _ Use of insulation to avoid surge currents
- _ Safety-lock technology for high resistance to vibrations, shaft loads, and installation errors
- _ Cable lengths available up to 300 m

In combination with a separately driven fan, the rotary pulse encoders are supplied with an external plug connection. The rotary pulse encoder can only be attached to a standard NDE shaft extension, meaning that a second shaft extension will not be available.

*The encoder can be retrofitted. When the motor is ordered, the option "Prepared for mountings, center hole only" order code **G40** or the option "Prepared for mountings with **D12** shaft" order code **G41** must be specified.*

The dimensions of the motor are increased by ΔI by mounting the rotary pulse encoder. The "Modular technology" and "Special technology" rotary pulse encoders are fitted with a protective cover made from corrosion-resistant sheet metal as standard. Mounted encoders for temperatures below $-20\text{ }^{\circ}\text{C}$ and above $+40\text{ }^{\circ}\text{C}$ are available on request.

Technical specifications for Sendix 5020 (HTL/TTL version)

	Sendix 5020 (HTL version)	Sendix 5020 (TTL version)
Supply voltage	10 ... 30 V DC	5 V DC $\pm 5\%$
Energy consumption with inverted signal (no-load operation)	max. 100 mA	max. 90 mA
Admissible load/channel	max. ± 40 mA	max. ± 20 mA
Pulses per revolution	1024 (2048 and 512 on request)	
Outputs	2 square-wave pulses A, B - 2 inverted square-wave pulses A, B	
Pulse offset between the two outputs	90°	
Signal level	$U_{\text{High}} = \text{min. } U_{\text{B}} - 1\text{ V}$ $U_{\text{Low}} = \text{max. } 0.5\text{ V}$	$U_{\text{High}} = \text{min. } 2.5\text{ V}$
Edge rise time t_r	max. 1 μs	max. 200 μs
Edge fall time t_f	max. 1 μs	max. 200 μs
Pulse frequency	max. 300 kHz	
Maximum speed	12000 rpm/6000 rpm (continuous)	
Operating temperature range	-40°C ¹⁾ ... $+100\text{ }^{\circ}\text{C}$	
Degree of protection acc. to EN 60529	IP65	
Maximum admissible radial cantilever force	100 N	
Maximum admissible axial force	50 N	
Connection system	12-pin M23 connector (mating connectors are always supplied)	
Certificates	UL, CSA (ATEX on request)	
Weight	0.4 kg	
Explosion protection certificate for explosive areas	Available on request for Zones 2 and 22	
Shock resistance acc. to EN 60068-2-27	3000 m/s ² , 6 ms	
Vibration resistance acc. to EN 60068-2-6	300 m/s ² , 10 ... 2000 Hz

Introduction

Special technology

Overview

Rotary pulse encoders for SIL2, SIL3 safety applications

The rotary pulse encoders with order codes **G21**, **G22**, **G25**, and **G27** are suitable for SIL2 and SIL3 safety applications and can be used subject to consideration of the mechanical installation conditions. The rotary pulse encoders from Baumer, Leine&Linde, and Kübler are designed for the implementation of safety-related functions, such as speed, direction of rotation, and position.

Functional safety

The safety integrity level SIL2 or SIL3 of the rotary pulse encoders is certified by the manufacturers Baumer, Leine&Linde, and Kübler. To ensure correct functioning of the rotary pulse encoder, various mounting measures are defined that are certified by TÜV and must correspond to safety applications up to levels PLd, category 3, SIL2 and PL e, category 4, SIL3.

The EC Declaration of Conformity complies with the Machinery Directive 42/2006/EC with consideration of EN 61800-5-2.

- _ Functional safety can only be ensured with the use of a suitable control and evaluation unit. It is mandatory to perform a function test in the safety circuit after initial installation, conversion, repair or modification.
- _ Installation, first commissioning and service requiring replacement of a rotary encoder on the customer's site must only be performed by qualified persons. If this requirement is not observed, the manufacturer's warranty will be voided.
- _ Upgrading with the functional safety rotary encoder for the defined Innomotics products that were originally manufactured without it is permissible on request provided that the upgrade is performed only in lead repair centers.
- _ Before you commission the motor with the functional safety encoder, read the information in the operating instructions.

General technical features

- _ The standard version of the motor is supplied with the order code **G43** (mechanical protection for encoder) and with a torque arm fitted between the encoder and motor.
- _ The functional safety encoders cannot be combined with the order codes **G40**, **G41**, and **G42** (prepared for externally mounted components) and can only be mounted at the non-drive end (NDE), i.e. a second shaft extension cannot be supplied.
- _ The safety rotary encoders with order code **G21** or **G22** are mounted with their cable and connector.
- _ The overall length of the motor and weight of the motor must be considered, see "Dimensions and weights".

Sendix 5834FS2/FS3 rotary pulse encoder

The Sendix 5834 rotary pulse encoder from Kübler in the version SinCos can be used in compliance with safety integrity level SIL2 when mounted complete on motors with the order code **G21** or SIL3 with the order code **G22** for frame sizes 71 to 315.

Technical specifications for Sendix 5834FS2/FS3

	Sendix 5834FS2/FS3
Supply voltage	5 V DC \pm 5 %
Current input without load	max. 70 mA
Pulses per revolution	1024
Outputs	Sine signal: B, B_inv Cosine signal: A, A_inv
Maximum frequency	400 kHz
Signal level	1 Vpp
Maximum speed	9000 rpm/6000 rpm (continuous)
Operating temperature range	-40 ... +90 °C
Degree of protection acc. to EN 60529	IP65
Maximum admissible axial force	40 N
Maximum admissible radial cantilever force	80 N
Connection system	12-pin connector M23 with 1 m cable
Certificates	PLD/SIL2 – SIL 3/PLe
Weight	0.45 kg
Shock resistance acc. to EN 60068-2-27	500 m/s ² , 11 ms
Vibration resistance acc. to EN 60068-2-6	200 m/s ² , 10 ... 150 Hz

Overview**HOGS 100 S rotary pulse encoder**

The HOGS 100 S rotary pulse encoder from Baumer in the version SinCos can be used in compliance with safety integrity level SIL2 when mounted complete on motors with order code **G25** for frame sizes 180 to 450.

Technical specifications for HOGS 100 S

	HOGS 100 S
Supply voltage	5 V DC \pm 10 %
Current input under load	\leq 150 mA
Sine cycles per revolution	1024
Operating speed	\leq 10000 rpm
Signal frequency	\leq 250 kHz
Temperature range	-20 ... +85 °C
Degree of protection	IP66
Maximum adm. axial force	250 N
Maximum adm. radial cantilever force	400 N
Connection system	Terminal box
Anti-corrosion protection	Complies with corrosivity category C4 acc. to ISO 12944-2
Explosion protection (gas)	II 3G Ex nA IIC T4 Gc
Explosion protection (dust)	II 3D Ex tc IIIc T135°C Dc
Functional safety	PL d / SIL2
Weight	1.8 kg

FSI 862 rotary pulse encoder

This FSI 862 rotary pulse encoder is extremely rugged and is therefore suitable for difficult operating conditions. This rotary pulse encoder in a HC HTL (High Current HTL) version can be used in compliance with safety integrity level SIL2 when mounted complete on motors with order code **G27** for frame sizes 180 to 450.

Technical specifications for FSI 862

	FSI 862
Supply voltage	9 ... 30 V DC
Current input	60 mA at 24 V DC (max. 80 mA)
Output current	\pm 40 mA
Pulses per revolution	1024 or 2048
Outputs	HCHTL
Pulse offset between the two outputs	90° el \pm 25° el
Pitch error	\pm 50 el
Cable length	max. 350 m at 100 kHz
Maximum speed	6000 rpm
Temperature range	-40 ... +85 °C
Degree of protection	IP66 (IP67)
Maximum adm. radial cantilever force	100 N
Maximum adm. axial force	300 N
Connection system	Cable gland M20
Weight	approx. 1.3 kg
Shock resistance acc. to	\leq 400 g, 3.5 ms EN 60068-2-27
Vibration resistance acc. to	\leq 20 g, 55 ... 2000 Hz EN 60068-2-6

Overview

Backstop, counterclockwise/clockwise motion blocked

The backstop (order code **F40/F41**) prevents the motor from moving while in de-energized state against its direction of rotation in the energized state.

The backstop is only available for Innomatics SD – 1LE15/1LE16, 1LE55/1LE56, VSD10, VSD4000 motors.

- _ Counterclockwise motion blocked: Order code **F40**
- _ Clockwise motion blocked: Order code **F41**

Innomotics GP and Innomotics SD standard motors

Overview

2

Increasing energy costs have resulted in greater emphasis on the power consumption of drive systems. It is extremely important to utilize the full potential for minimizing energy consumption here to secure competitiveness today and in the future. The environment will also profit from reduced energy consumption.

This is the reason why we have already developed a new generation of low-voltage motors. Innovative rotors create the best requisites for motors with a high degree of efficiency. IE1 and IE2 motors with the same power have the same dimensions. The new motors for IE2, IE3 and IE4 offer considerable energy savings and protect our environment. We also consider environmental compatibility and sustainable use of resources during production. Potting compounds and coatings are, for example, solvent-free.

The modular mounting concept provides total flexibility. Each motor is based on a uniform concept for all markets worldwide. Our motors are manufactured according to the most advanced ecological standards.

The new 1LE1 motor family is therefore one of the most compact in the world, because it is manufactured using innovative technology. For an optimized design, a compound of highly conductive materials is used in the rotor (up to frame size 200). This results in minimum rotor losses and an excellent starting and switching response.

The design of the 1LE1 motors ensures maximum flexibility and minimum installation costs. Users benefit from integral lifting eyes, screw-on feet, reinforced bearing plates with optimum mechanical properties and easily accessible terminal boxes. Encoders, brakes and separately driven fans can also be added without any problems. Smaller inventories make stock-keeping easier, so motor suppliers can respond to customer requirements more quickly.

The 1LE1/1LE5/1PC1 motor family comprises two main series:

Innomotics GP for general purpose applications: Motors with an aluminum housing

Innomotics GP 1LE1/1PC1 motors with an aluminum housing are suitable for a wide range of standard drive tasks in the industrial environment. Thanks to their particular low weight, they are predestined for applications in pumps, fans and compressors. But they also reliably fulfill their tasks in conveyor systems and lifting gear.

Brief overview

Power and voltage range: 0.09 ... 45 kW
for all commonly used voltages

Frame sizes and types of construction: 63 ... 200 in all common types of construction

Rated speed: 750 ... 3600 rpm

Number of poles: 2, 4, 6, 8

Efficiency classes:

- _ IE1 (Standard Efficiency)
- _ IE2 (High Efficiency)
- _ IE3 (Premium Efficiency)
- _ IE4 (Super Premium Efficiency)
- _ IR3 (Rendimento Premium)
- _ NEE (NEMA Energy Efficient, acc. to NEMA MG, Table 12-11)
- _ NPE (NEMA Premium Efficient, acc. to NEMA MG, Table 12-12)

Innomotics SD for severe duty applications: Motors with cast-iron housing

Innomotics SD 1LE1/1LE5 motors with a cast-iron housing are extremely rugged and are therefore the first choice for applications under harsh environmental conditions. They master dust or vibration in mills and mixers as well as the corrosive atmosphere in the petrochemical industry.

Brief overview

Power and voltage range: 0.09 ... 1000 kW
for all commonly used voltages

Frame sizes and types of construction: 71 ... 450 in all common types of construction

Rated speed: 750 ... 3600 rpm

Number of poles: 2, 4, 6, 8

Efficiency classes:

- _ IE1 (Standard Efficiency)
- _ IE2 (High Efficiency)
- _ IE3 (Premium Efficiency)
- _ IE4 (Super Premium Efficiency)
- _ IR3 (Rendimento Premium)
- _ NEE (NEMA Energy Efficient, acc. to NEMA MG, Table 12-11)
- _ NPE (NEMA Premium Efficient, acc. to NEMA MG, Table 12-12)

Innomotics GP and Innomotics SD standard motors

Overview

High efficiency energy-saving motors for a positive energy balance

Depending on requirements, energy-saving motors for a positive energy balance are available that are compliant with the legal requirements applicable in the European economic area in accordance with EU Directive 640/2009 as well as for the North American market in accordance with US federal law EISA (Energy Independence Security Act).

Motors with increased power and compact construction (1LE1)

Motors with increased power and compact construction can be used to advantage in confined spaces. For a slightly longer overall length, the power is at least as high as that of the next largest frame size. These compact motors are also optimized for efficiency. They are offered in IE2 and IE3 and therefore reduce operating costs.

Benefits

There is considerable potential in the new 1LE1/1PC1 series of low-voltage motors. As a consistent further development of existing motors, the 1LE1/1PC1 motors offer numerous advantages.

Greater efficiency

Innovative rotor technology and manufacturing technology has been implemented for the IE3 and IE4 high efficiency motor variants. The energy-efficient motors are therefore considerably more compact.

Innomotics Evaluate is the tool to calculate the energy saving potential and life cycle costs of all motors. Innomotics Evaluate can be downloaded free of charge from the following website: evaluate.innomotics.com
No registration needed.

The 1LE1 motors also impress customers with their extremely long life and their weight-optimized design has a positive effect on the stability of the equipment unit.

A wider range of applications

The motors are certified for worldwide use and satisfy high standards of quality (confirmed, for example, by CSA ¹⁾, UL ²⁾, CQC ³⁾, UKCA ⁴⁾).

Improved design

The rugged housing in modern EMC design has an attractive appearance and enhances functionality. The rotatable, accessible terminal boxes, integral lifting eyes, screw-on feet and reinforced bearing plates ensure this.

Motors without fan cover and without external fan (1LE1 with order code F90)

Forced-air cooled motors with surface cooling without fan cover and without external fan are mainly used for driving fans.

Motors with reduced power without fan cover and without external fan (1PC1 motors on request)

Naturally cooled motors with surface cooling without fan cover and without external fan are suitable for the following operating conditions:

- _ Types of duty with adequate cooling times (e.g. temporary duty for positioning drives)
- _ Environmental conditions that demand compact installation space (e.g. in motors with a stopping function)

Requirements that make an external fan disadvantageous, e.g. simple cleaning in the food industry, textile industry.

Greater power

For the same frame size, the high-performance motors offer one complete rated power level more. We are also consistently implementing energy efficiency improvements here, too. The motors are offered (based on the categories of IEC 60034-30-1) in various efficiency classes.

More flexibility

The optimized design of the motors makes installation easier in general. Encoders, brakes and separately driven fans can be retrofitted easily. Terminal boxes and feet for flexible mounting can be selected. Smaller inventories make stock-keeping easier and motor suppliers can respond to customer requirements more quickly. Optimized manufacturing processes support fast availability. All motors up to 480 V can be operated either directly on the line or on a converter.

For general purpose applications:

Innomotics GP motors with an aluminum housing

Particularly user friendly

The previously introduced, well-proven, obliquely partitioned terminal box is being implemented consistently throughout the entire motor series.

Special export line

For exporting to NAFTA, the Eagle Line is available. The motors are supplied with the electrical values stamped on the rating plate in accordance with EISA requirements.

¹⁾ Canadian Standard Association
²⁾ Underwriters Laboratories Inc.

³⁾ China Quality Certification
⁴⁾ UK Conformity Assessed

Innomotics GP and Innomotics SD standard motors

Benefits

For severe duty applications:

Innomotics SD motors with a cast-iron housing

The right motor for various challenges

The following lines are available for severe duty applications:

- _ Basic Line (1LE15): rugged, reliable motors for machine construction
- _ Performance Line (1LE16): Motors for the process industry with reinforced bearings and a more rugged coating – for requirements that extend beyond the Basic Line
- _ "Eagle Line": Motors for exporting to the NAFTA zone; they fulfill the requirements of UL and CSA and are supplied with the electrical values stamped on the rating plate in accordance with EISA requirements

Comparison: Basic Line versus Performance Line

Function	Basic Line	Performance Line
Bearing size	62 (63 from frame size 280 upwards)	63
Relubrication	Optional (standard from frame size 280 upwards)	Standard from frame size 160 upwards (optional for frame size 100 to 132)
Paint system	Standard paint finish, corrosivity category C2 ¹⁾	Special paint finish, corrosivity category C3 ¹⁾
Drainage	Drain plugs	T drains
Rating plate	Aluminum, plastic	Steel
Motor protection	Optional	PTC
Fan cover	Plastic	Steel
Warranty	Standard 12 months (optionally 36 months for frame sizes 180 to 315)	Standard 36 months

Compact design

The size of a motor is often an important aspect in the case of machines. For this reason, the 1LE1 motors in IE2 and IE3 are not any longer than their predecessors in the 1LG series in IE2.

Another highlight: some of the IE3 motors fit in the same housing as the IE2 motors. The efficiency classes naturally do not differ with regard to shaft height, so that the mechanical interface to the equipment unit remains the same. This also supports a largely problem-free efficiency upgrade to IE3 – without the need to adapt the mechanical design of a machine.

Greater power

In severe duty applications, motors with increased power can also be the right solution if sufficient space is not available for a standard motor. Because these motors offer the same power range in the next smallest frame size.

Application

As soon as the range of motors and options is complete, it will be possible to use the 1LE1/1PC1 motors from Innomotics in all areas and sectors of industry due to their numerous options. They are suitable both for special environmental conditions such as those that predominate in the chemical or petrochemical industry as well as for most climatic requirements such as those of offshore applications.

Their large range of line voltages enables them to be used all over the world.

The wide field of implementation includes the following applications:

- _ Pumps
- _ Fan
- _ Compressors
- _ Conveyor systems such as cranes, belts and lifting gear
- _ High-bay warehouses
- _ Packaging machines
- _ Automation and drives
- _ Manufacturing industry
- _ General machine construction

Motors with a cast-iron housing are particularly suitable for the following severe duty applications:

- _ Petrochemical industry
- _ Pharmaceuticals
- _ Chemical industry
- _ Printing industry
- _ Process industry

Innomotics GP and Innomotics SD standard motors

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications. For more information and details, see Catalog Section 1 "Introduction".

Type of motor	Innomotics GP/SD 1LE1/1LE5/1PC1 IEC Low-Voltage Motors
Connection types	Star/delta connection The connection type to be used can be established from the Article No. supplements for the required motor.
Number of poles	2, 4, 6, 8
Frame sizes	63 M ... 315 L
Rated power	0.09 ... 300 kW (1LE1/1LE5 motor series)/0.3 ... 9 kW (1PC1 motor series)
Frequencies	50 Hz and 60 Hz
Versions	Self-ventilated 1LE1 energy-saving motors with: _ IE1 (Standard Efficiency) _ IE2 (High Efficiency) _ IE3 (Premium Efficiency) _ IE4 (Super Premium Efficiency) _ IR3 (Rendimento Premium) _ NEE (NEMA Energy Efficient, acc. to NEMA MG, Table 12-11) _ NPE (NEMA Premium Efficient, acc. to NEMA MG, Table 12-12) Self-ventilated 1LE1 motors with increased power with: _ IE1 (Standard Efficiency) _ IE2 (High Efficiency) _ IE3 (Premium Efficiency) Forced-air cooled 1LE1 motors without external fan and fan cover with: _ IE1 (Standard Efficiency) _ IE2 (High Efficiency) _ IE3 (Premium Efficiency) _ IE4 (Super Premium Efficiency) _ IR3 (Rendimento Premium) Naturally cooled 1PC1 motors without external fan and fan cover with: _ IE1 (Standard Efficiency) _ IE2 (High Efficiency) _ IE3 (Premium Efficiency) _ IE4 (Super Premium Efficiency)
Marking	IEC 60034-30-1 IE1, IE2, IE3, IE4: 2, 4, 6 and 8-pole; NBR 17094-1: IR3 Rendimento Premium: 2, 4, 6, and 8-pole US Energy Independence Security Act EISA: 2, 4, 6 and 8-pole
Rated speed (synchronous speed)	750 ... 3000 rpm
Rated torque	0.6 ... 1978 Nm (1LE1/1LE5 motor series)
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class 155 (F), utilized acc. to temperature class 130 (B) (also for motors with increased power) DURIGNIT IR 2000 insulation system
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP55 as standard
Cooling according to EN 60034-6 (IEC 60034-6)	_ Self-ventilated (IC411) (1LE1/1LE5 motor series) frame size 80 M to 315 L _ Forced-air cooled (IC418) (1LE1/1LE5 motor series with order code F90), frame size 80 M to 200 L _ Naturally cooled (IC410) (1PC1 motor series) frame size 100 L to 160 L
Permissible coolant temperature and installation altitude	-20 ... +40 °C as standard, installation altitude up to 1000 m above sea level. See "Coolant temperature and installation altitude" in Catalog Section 1 "Introduction".
Standard voltages according to EN 60038 (IEC 60038)	50 Hz: 230 V, 400 V, 500 V, 690 V The voltage to be used can be found in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	_ Without flange: IM B3, IM B6, IM B7, IM B8, IM V5 without protective cover, IM V6, IM V5 with protective cover _ With flange: IM B5, IM V1, IM V3, IM B35 _ With flange (next largest): IM B14, IM V19, IM V18, IM B34
Paint finish	Standard: Color RAL 7030 stone gray
Suitability of paint finish for climate group according to IEC 60721, Part 2-1	See "Paint finish" in Catalog Section 1 "Introduction".
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal – without special vibration requirements) Optionally: Grade B (with special vibration requirements) See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: half-key balancing as standard See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The corresponding sound pressure level is listed in the selection and ordering data for the required motor.
Weights	The corresponding weight is listed in the selection and ordering data for the required motor.
Modular mounting concept	Rotary pulse encoder, brake, separately driven fan or prepared for mountings
Consistent series concept	_ Cast housing feet, screwed-on feet available as an option and retrofittable _ Terminal box obliquely partitioned and rotatable through 4 × 90° _ Bearings at DE and NDE are of identical design, reinforced bearings available as an option
Options	See "Article No. supplements and special versions"

More information

For further information, please get in touch with your local Innomotics contact and use the Innomotics Configurator.

Contacts: [Innomotics.com/hub/de/contact/map](https://innomotics.com/hub/de/contact/map)

Innomotics Configurator: configurator.innomotics.com

Wherever possible, you will find a local contact for:

- _ Technical support
- _ Spare parts/repairs
- _ Service
- _ Training
- _ Sales
- _ Technical consultation/engineering

You start by selecting a:

- _ country,
- _ product or
- _ sector.

By further specifying the remaining criteria you will find exactly the right contact partner with his/her respective expertise.

Overview

Converter operation up to 480 V +10 % line voltage

See Chapter 1, page 1/31.

During installation, the EMC guidelines must be complied with

Note:

When motors are operated on SINAMICS converters additional losses occur which, depending on the admissible winding temperature, can make it necessary to reduce the torque. The admissible torque values can be obtained from the TIA Selection Tool (www.siemens.com/tst) configuring tool. The lowest frequency specified there is 5 Hz. For stationary converter operation at lower frequencies, particularly in the case of frame sizes < 100, it is necessary to inquire at the Quotation Center.

Benefits

Motors operating with frequency converters offer the user numerous advantages.

The motors feature the future-oriented insulation system DURIGNIT IR 2000 (IR = Inverter Resistant). The DURIGNIT IR 2000 insulation system consists of high-quality enamel wires and insulating sheet materials in conjunction with temperature-resistant resin impregnation.

Application

The wide field of implementation includes the following applications:

- _ Conveyor systems such as cranes, belts and lifting gear
- _ High-bay warehouses
- _ Packaging machines
- _ Automation and drives

Their large range of line voltages enables them to be used all over the world.

Technical specifications

General note

All the data listed in the catalog is applicable for a 50 Hz line supply. With converter operation, the torque reduction factors for constant torque and drives for fans, pumps and compressors must be configured using the "SIZER for Siemens Drives" engineering tool. Higher noise levels must be expected at frequencies other than 50 Hz for motors operating with converters due to the harmonic content of the supply.

Mechanical limit speeds

When the motor is operated above its rated frequency, it is important to note that the maximum speeds are limited by the limits for the roller bearings, critical rotor speed and rigidity of the rotating parts (see page 1/67).

Motor protection

A motor protection function can be implemented using the I^2t sensing capability implemented in the converter software.

If required, more precise motor protection can be afforded by direct temperature measurement using PTC thermistors, or Pt1000 resistance thermometers in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping.

Insulation

The insulation of 1LE motors is designed such that converter operation is possible at voltages up to 480 V¹⁾.

$\dot{U}_{\text{phase-to-phase}} \leq 1500 \text{ V}$, $\dot{U}_{\text{phase-to-ground}} \leq 1100 \text{ V}$, voltage rise times of $t_s > 0.1 \mu\text{s}$.

For converter operation with the power ratings specified in the catalog, the motors are used according to temperature class 155 (F), i.e. in this case neither a service factor > 1 nor an increased coolant temperature is possible (order codes N01, N02 and N03 cannot be ordered).

Innomotics GP and Innomotics SD standard motors

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1LE1001-1DB22-2CB5-Z
H00**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and power and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- Complete Article No. and order code(s) or plain text
- If a quotation has been requested, please specify the quotation number in addition to the Article No.
- When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

Note:

Further IE4 motors are available as standard Innomotics SD (1LE5) next generation motors, see page 4/9.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

3) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Aluminum series Innomotics GP 1LE1003 – self-ventilated

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B4 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B4 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

Innomotics GP and Innomotics SD standard motors

Aluminum series Innomotics GP 1LE1083 – self-ventilated

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B4 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B4 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Innomotics GP and Innomotics SD standard motors

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B4 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B4 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

2

1) Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
 2) Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

3) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
 4) Version as 315 M (different from 315 S according to IEC 60072-1).

Innomotics GP and Innomotics SD standard motors

Cast-iron series Innomotics SD 1LE1583 – self-ventilated or forced-air cooled

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomatics Configurator.
²⁾ For converter operation of shaft heights 63 and 90, ordering with PTC thermistors and their connection to the converter is recommended.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

Innomatics GP and Innomatics SD standard motors

Aluminum series Innomatics GP 1LE1001 – self-ventilated or forced-air cooled

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomatics Configurator.
²⁾ For converter operation of shaft heights 63 and 90, ordering with PTC thermistors and their connection to the converter is recommended.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomatics Configurator.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

1) Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
2) Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

3) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

1) Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
 2) Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

3) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Cast-iron series Innomotics SD 1LE1501 Basic Line – self-ventilated or forced-air cooled

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
⁴⁾ No IE class for 50 and 60 Hz because the motor is outside the validity for the efficiency classes according to IEC 60034-30-1:2014.

1) Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
 2) Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

3) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

2

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

1) Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
 2) Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

3) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

2

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomotics Configurator.
²⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

³⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) and stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

2

1) Types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with MG1 Table 12-11.

2) Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

- Not required
? Available

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12. Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Innomotics GP and Innomotics SD standard motors

Cast-iron series Innomotics SD 1LE1523 Basic Line – self-ventilated or forced-air cooled

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12. Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-12. Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code **R52**) or a larger terminal box (order code **R50**) can be used. Order codes **R52** and **R50** alter the motor dimensions.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Cast-iron series Innomotics SD 1LE1623 Performance Line – self-ventilated or forced-air cooled

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-11.
²⁾ Types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with MG1 Table 12-11.

³⁾ Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) and stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

- Not required
- ? Available

¹⁾ Operating voltages only ≤ 600 V admissible in accordance with MG1 Table 12-11. Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.
²⁾ Types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with MG1 Table 12-11.

³⁾ Types derived from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirement exists for stamping of the type on the rating plate. The basic type IM B5 or IM B14 is stamped as standard on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

Note:

Pole-changing motors (4/2-pole) do not comply with the vibration values stipulated in IEC 60034-14 when rigidly installed (see also page 1/65).

¹⁾ Operating values for 60 Hz are available on request.

²⁾ Types derived from IM B3 (IM B6/7/8, IM V6, and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5, or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

- Standard version
- ✓ With additional charge
- O.R. Possible on request
- Not possible

1) The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

2) The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

3) For North America export version Eagle Line 1LE1521 NEMA Energy Efficient, types of construction with feet are not possible for 2-pole, 4-pole and 6-pole motors ≤ 200 hp in accordance with NEMA MG1 Table 12-11.

4) In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).

5) The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.

6) The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

7) The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

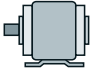

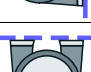

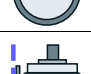

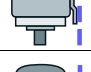

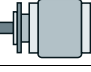

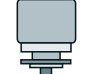

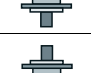

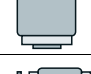

8) With reference to standard IEC 60072-1, flanges that are 2 levels larger are used with option **P01** in the frame sizes 71 and 80.

9) When ordering frame size B7 and the required cable outlet below, option **R12** must also be ordered.

¹⁾ The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

²⁾ The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

³⁾ The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.

⁴⁾ In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard version (without additional charge).

⁵⁾ Not possible for forced-air cooled 1LE1 motors with order code **F90** without external fan and fan cover.

⁶⁾ The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

⁷⁾ The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

⁸⁾ When ordering frame size B7 and the required cable outlet below, option **R12** must also be ordered.

⁹⁾ For the standard IEC60072-1, flanges which are 2 levels larger are used in frame size 80 with option **P01**.

- Standard version
- With additional charge
- Not possible

Note:

Options are available specifically for bearing protection – for order codes and descriptions, see from page 2/132.

¹⁾ For the Performance Line, motor protection by means of PTC thermistors with 3 built-in temperature sensors for tripping (motor protection code letter B) is already included in the basic price. For the Performance Line, the option "Without motor protection" (motor protection code letter A) is not possible.

²⁾ Evaluation with appropriate tripping unit (see Catalog IC 10) is recommended.

Innomotics GP and Innomotics SD standard motors

Overview

Couplings

The motor from Innomotics is connected to the machine or gear unit through a coupling. Flender is an important coupling manufacturer with a wide range of products.

For standard applications, Innomotics recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

Available from:

Flender contact partner – ordering from catalog
Flender MD 10.1 "FLENDER Standard Couplings"

or

Flender GmbH
Kupplungswerk Mussum
Industriepark Bocholt
Schlavenhorst 100

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany
Phone +49 (711) 1388-0
Fax +49 (711) 1388-233

www.ottoroth.de

Email: info@ottoroth.de

Foundation block according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation block that is bolted to the machine (without washers) and fitted with taper pins is not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany
Phone +49 (5241) 7407-0
Fax +49 (5241) 7407-90

Email: info@luetgert-antriebe.de

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923.

For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany

More information

Replacement motors and repair parts

- _ Commitment to provide replacement motors and repair parts following delivery of the motor:
 - _ For up to 3 years after delivery of the original motor, in the event of total motor failure, Innomotics will supply a comparable replacement motor with regard to the mounting dimensions and functions (the type series may vary).
 - _ If a replacement motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - _ Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - _ Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - _ After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - _ For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Innomotics will provide information about spare parts and will supply documents when required.
- _ When repair parts are ordered, the following details must be provided:
 - _ Designation and part number
 - _ Article No. and factory number of the motor.

Example for ordering a fan cover 1LE1003, frame size 112 M, 4-pole:
Fan cover No. 7.40,
1LE1003-1BB23-4AA4-Z, part No. E1001/5236197_01_001
- _ For bearing types, see Catalog Section 1 "Introduction".
- _ Repair parts for 1MJ6, 1MJ7, 1MJ8, 1MJ1, 1ME8, 1ML8 motors are available on request.
- _ For standard components, a commitment to supply repaired parts does not apply.

You will find telephone numbers for other countries on our Internet site:

innomotics.com/hub/en/customer-service

Innomotics GP and Innomotics SD standard motors

Notes on the dimensions

Overview

_ Dimension designations according to IEC 60072-1 and IEC 60072.

_ Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (IEC 60072-1) are machined with the following fits:

Dimension designation	ISO fit DIN ISO 286-2	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
S	flange (FF)H17	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension K: nominal dimension according IEC 60072-1, negative deviation of tolerance H17 possible

_ Dimensional tolerances

For the following dimensions, the admissible deviations are given below:

Dimension	Dimension	Admissible deviation
H	to 250	- 0.5
	over 250	- 1.0
E, EA		- 0.5

Keyways and feather keyways (dimensions GA, GC, F, and FA) are made in compliance with DIN 6885 Part 1.

_ All dimensions are specified in mm.

_ The overall width of the motor is identical to the "AC" dimension.

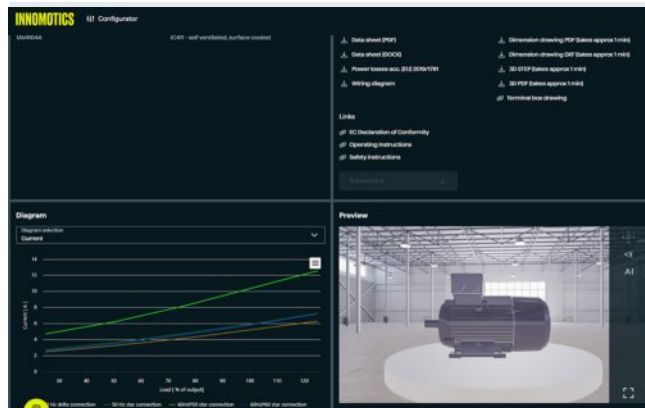

Innomatics GP and Innomatics SD standard motors

Dimension sheet generator (within the DT Configurator)

Overview

A dimensional drawing can be created in the Innomatics Configurator for every configurable motor.

A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access

The Innomatics Configurator is integrated into the can be used on the Internet.

configurator.innomatics.com

Innomotics GP and Innomotics SD standard motors next generation

Overview

3

The Innomotics SD next generation is a new scalable generation of low-voltage motors. With their impressive performance and the additional versatility in their range of applications, this new motor series offers entry into a future-proof drive technology.

In addition to the future topics of digitalization and energy efficiency, this motor generation was developed with the focus on design optimization, which has resulted in a very compact motor design with a high power density. A standardized option range and the variable terminal box concept also enable flexible use of the motors in different system configurations and applications. The fact that the motors can either be operated on the line supply or with a converter is part of their versatility.

The following versions are available in the new 1LE5 motor series, differentiated by their performance features and functionality:

_ Innomotics SD

These motors are characterized by reliable and powerful performance even in the toughest environmental conditions. The characteristics with higher torques ensure that higher starting and breakaway torques are available. Innomotics SD can be used as standard in the European Economic Area and have the CE-mark and UKCA-marking. The required minimum efficiency levels have to be considered when selecting the motor.

_ Innomotics SD Add

The characteristic product feature of the Innomotics SD Add are the low starting currents. These not only meet industry-specific specifications, above all, in process industries, but also have a positive impact on the operating quality (higher power system stability, lower thermal load, increased motor lifetime).

Innomotics SD Add can be used as standard in the European Economic Area and North America. The required minimum efficiency levels have to be considered when selecting the motor. These motors have in addition to the CE-mark and UKCA-marking also approvals for USA (UL safety and DoE listing) as well as approvals for Canada (CSA safety and CSA Energy Efficiency Verification). They are supplied with the electrical values stamped on the rating plate in accordance with IEC and EISA requirements. In addition, many other certificates are optionally available.

_ Innomotics SD Pro

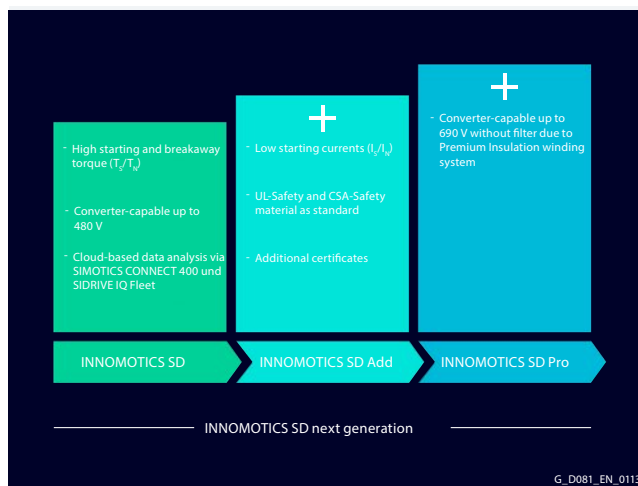

The Innomotics SD Pro range is characterized by its extremely flexible concept, which makes it universally deployable, in any plant, in any country in the world. The Premium winding insulation system of these motors is designed such that converter operation is possible at voltages up to 690 V, which does not require any dv/dt or sinewave filter at the converter output.

The permissible peak-peak voltages are:

$$\hat{U}_{\text{phase-to-phase}} \leq 4400 \text{ V and } \hat{U}_{\text{phase-to-ground}} \leq 3000 \text{ V}$$

Innomotics SD Pro can be used as standard in the European Economic Area and North America. The required minimum efficiency levels have to be considered when selecting the motor. These motors have in addition to the CE-mark and UKCA-marking also approvals for USA (UL safety and DoE listing) as well as approvals for Canada (CSA safety and CSA Energy Efficiency Verification). They are supplied with the electrical values stamped on the rating plate in accordance with IEC and EISA requirements. In addition, many other certificates are optionally available.

Innomotics SD variants

Innomotics GP and Innomotics SD standard motors next generation

Benefits

- _ Rugged design in the cast-iron housing increases reliability and availability.
- _ Compact dimensions/high power density enable use even in confined space conditions.
- _ High energy efficiency in line (IE3, IE4) and converter operation (IES2) enable energy-saving operation.
- _ A standardized range of options and a variable terminal box concept increase the flexible adaptation to the requirements of the application.
- _ Support of line and converter operation reduces the variety.
- _ Provision of comprehensive CAD data simplifies the design and engineering phase.

Application

Innomotics SD motors are ideal for use in a large number of standard applications, such as

- _ Pumps, fans, compressors
- _ Conveyors
- _ Winders
- _ Mixers
- _ Extruders
- _ Cranes

They are preferably used in industries such as

- _ Mining, cement
- _ Chemical industry
- _ Oil and gas
- _ Steel industry
- _ Water, waste water
- _ Heating, ventilation and air conditioning (HVAC)
- _ Pulp and paper industry
- _ Marine engineering

Innomotics GP and Innomotics SD standard motors next generation

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications. For more information and details, see Catalog Section 1 "Introduction".

Type of motor	Innomotics SD 1LE5 IEC Low-Voltage Motors
Connection types	Star/delta connection The connection type to be used can be taken from the Article No. supplements for the required motor.
Number of poles	2, 4, 6, 8
Frame sizes	132 S ... 450
Rated power	2.2 ... 1000 kW
Frequencies	50 Hz and 60 Hz
Versions	_ IE3 (Premium Efficiency) _ IE4 (Super Premium Efficiency)
Marking	IEC 60034-30-1 IE3, IE4: 2, 4, 6 and 8-pole
Rated speed (synchronous speed)	750 ... 3600 rpm
Rated torque	17.8 ... 8100 Nm
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	_ SD and SD Add: Temperature class 155 (F), utilized to temperature class 130 (B) DURIGNIT IR 2000 insulation system _ SD Pro: Temperature class 155 (F), utilized to temperature class 155 (F) DURIGNIT IR 2000 insulation system
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP55 as standard
Cooling in accordance with EN 60034-6 (IEC 60034-6)	_ Self-ventilated (IC411) _ Forced-air cooled motors w/o ext. fan/fan cover (IC418) _ Forced-air cooled (IC416)
Permissible coolant temperature and installation altitude	-20 ... +40 °C as standard, installation altitude up to 1000 m above sea level. See "Coolant temperature and installation altitude" in Catalog Section 1 "Introduction".
Standard voltages according to EN 60038 (IEC 60038)	50 Hz: 400 V, 500 V, 690 V The voltage used can be found in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	_ Without flange: IM B3, IM B6, IM B7, IM B8, IM V5, IM V6 _ With flange: IM B5, IM V1, IM V3, IM B35
Paint finish	Standard: color RAL 7030 stone gray
Suitability of paint finish for climate group according to IEC 60721, Part 2-1	See "Paint finish" in Catalog Section 1 "Introduction".
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal – without special vibration requirements) Optionally: Grade B (with special vibration requirements) See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: Half-key balancing as standard See "Balance and vibration severity" in Catalog Section 1 "Introduction".
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The sound pressure level is listed in the selection and ordering data for the required motor.
Weights	The weight is listed in the selection and ordering data for the required motor.
Modular mounting concept	Rotary pulse encoder, brake, separately driven fan or prepared for mountings
Consistent series concept	_ Terminal box diagonally split - and can be optionally rotated through 4 x 90° _ Bearings at DE and NDE are of identical design, reinforced bearings available as an option
Options	See "Article No. supplements and special versions"

Converter operation

The motors are suitable for line operation and optionally for converter operation (bearing insulation NDE, order code **L51**). The values specified in the selection tables apply for pure sinusoidal supplies.

Rated voltage

The tolerance for the rated voltage is in accordance with EN 60034-1 in all cases, a rated voltage range is not specified.

Motor protection

A motor protection function can be implemented using the I2t sensing circuit implemented in the converter software.

If required, more precise motor protection can be provided by directly measuring the temperature using Pt100 / Pt1000 resistance thermometers or PTC thermistors in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping.

Innomotics GP and Innomotics SD standard motors next generation

Technical specifications

Bearings

To avoid damage caused by bearing currents, insulated bearings (**L51**) must be ordered.

When operating multiphase induction motors with a converter, the bearings are electrically stressed as a result of a capacitively induced voltage across the bearing lubricating film (as a result of the inherent principle of operation). The physical cause of this is the common-mode voltage at the converter output that is inherent in the control method for a converter: The sum of the three phase voltages is – in contrast to pure line operation – not equal to zero at every point in time. The high-frequency, pulsed common-mode voltage results in a residual current that flows back to the converter DC link via the internal capacitances of the motor, the motor housing and the grounding circuit. The machine's internal capacitances include the main insulation winding capacitance, the geometric capacitance between the rotor and stator, the lubricating film capacitance and the capacitance of any bearing insulation that may be present. The current flowing through the internal capacitances is proportional to the gradient, i.e. the voltage change of the common-mode voltage ($i(t) = C \cdot du/dt$).

In order to apply currents to the motor which are sinusoidal as far as possible (smooth running, oscillation torques, stray losses), a high clock frequency is required for the converter's output voltage. The related (very steep) switching edges of the converter output voltage (and also, therefore, of the common-mode voltage) cause correspondingly high capacitive currents and voltages on the machine's internal capacitances.

In the worst-case scenario, the capacitive voltage induced via the bearing can lead to random arcing through the bearing lubricating film, thus causing premature bearing aging or damage. (The current pulses caused by the arcing across the lubricating film are referred to as EDM (Electrostatic Discharge Machining) currents in the literature.)

This physical effect, which occurs in isolated cases, has mostly been observed in connection with larger motors. EMC-compliant installation of the drive system is a basic prerequisite for preventing premature bearing damage via bearing currents. The most important measures for reducing damage to bearings.

- _ Insulated bearing at the non-drive end (NDE) (order code **L51**)
- _ Use cables with a symmetrical cable cross-section

- _ Preference given to a supply with insulated neutral point (IT system)
- _ Using grounding cables with low impedance over a wide frequency range (DC up to approximately 70 MHz): for example, plaited copper ribbon cables, HF litz wires
- _ Separate HF equipotential-bonding cable between motor housing and driven machine
- _ Separate HF equipotential-bonding cable between motor housing and converter PE busbar
- _ 360° HF contacting of the cable shield on the motor housing and the converter PE busbar. This can be achieved using EMC screwed glands on the motor end and EMC shield clips at the converter, for example
- _ Using motor reactors at the converter
- _ Common-mode filters at the converter output.

Thermal torque limits

In the case of self-ventilated motors, the thermally admissible load torques are reduced for continuous operation for speeds below the rated speed. This must be taken into account for applications, especially those that do not have a square law load torque. Also in the case of forced-air cooled motors (order code **F70**), the maximum load torques are reduced slightly for high speed ranges.

When motors are operated at speeds above their rated speed (in the field-weakening range), the maximum load torque is also reduced.

1LE5 motors of frame size 280 to 450

The current data can be obtained in the TIA Selection Tool (www.siemens.com/tst) configuration tool.

1) Terminal box 1XB1631.
 2) Terminal box position NDE can only be ordered using order code **H09** (2 × terminal box TB3R61). Order code **H08** not available.
 3) The standard version is 50 Hz 690 VΔ (voltage code **4-7**) or 60 Hz 575 VΔ (voltage code **4-0**).
 4) In the series version, the maximum speed is n_{max} = 3000 rpm. Operation up to 3600 rpm at higher speeds on request for an additional charge.
 5) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).
 6) For frame size 315, parallel supply lines are required, except in the case of connection to 690 V.

7) For frame size 315 with power rating 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current. Order code **R50** alters the motor dimensions.
 8) Only for frame size 315 if 11th position of Article No. for 2-, 4-pole motors **6, 7**, for 6-, 8-pole motors **7, 8**. Only for frame size 355 if 11th position of Article No. for 2-, 4-pole motors **3, 4, 5**; for all 6-, 8-pole motors and for frame size 400 to 450.
 9) Only for frame size 132 to 280 (for all motor types). Only for frame size 315 if 11th position of Article No. for all poles **0, 2, 4, 5**; for 6-, 8-pole motors **6**. Only for frame size 355 if 11th position of Article No. for 2-, 4-pole motors **0, 2**.

		Forced-air cooled motors w/o ext. fan/fan cover (IC418)				1LE5634-....												■-■-■-■-■-■ -Z F90+...+...+	
						1LE5634-....												■-■-■-■-■-■ -Z ...+...+...+	

¹⁾ Parallel supply lines are required, except in the case of connection to 690 V.
²⁾ For a power rating of 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current. Order code **R50** alters the motor dimensions.

Innometrics GP and Innometrics SD standard motors next generation

Cast-iron series Innometrics SD Pro 1LE5584 Basic Line – self-ventilated or forced-air cooled

3

1) Terminal box 1XB1631.
 2) Terminal box position NDE can only be ordered using order code **H09** (2 x terminal box TB3R61). Order code **H08** not available.
 3) The standard version is 50 Hz 690 VΔ (voltage code **4-7**) or 60 Hz 575 VΔ (voltage code **4-0**).
 4) In the series version, the maximum speed is $n_{max} = 3000$ rpm. Operation up to 3600 rpm on request for an additional charge.

5) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).
 6) For frame size 315, parallel supply lines are required, except in the case of connection to 690 V.
 7) For frame size 315 with power rating 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current. Order code **R50** alters the motor dimensions

3

1) Terminal box 1XB1631.
 2) The standard version is 50 Hz 690 VΔ (voltage code **4-7**) or 60 Hz 575 VΔ (voltage code **4-0**).
 3) In the series version, the maximum speed is n_{max} = 3000 rpm. Operation up to 3600 rpm on request.

4) Parallel supply lines are required, except in the case of connection to 690 V.
 5) For frame size 315 with power rating 315 kW, 2-pole, 60 Hz and 315 kW, 4-pole, 50 Hz, a larger terminal box can be used (order code **R50**) due to the magnitude of the current. Order code **R50** alters the motor dimensions.

- Standard version
- Without additional charge
- This order code only determines the price of the version – Additional plain text is required.
- O. R. Possible on request
- With additional charge

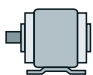

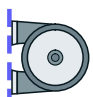

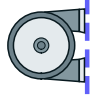

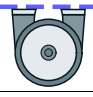

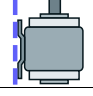

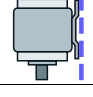

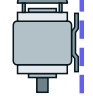

¹⁾ Without additional measures not possible for converter operation at 690 VY and 660 VΔ (valid for 1LE5504, 1LE5604, 1LE5534, 1LE5634, 1LE5503, 1LE5603, 1LE5533 and 1LE5633).
²⁾ Plain text must be specified in the order: Voltage between 200 and 690 V (voltages outside the range are available on request), frequency, circuit, rated power.
³⁾ 2-pole version, frame size 450 for 60 Hz operation on request.
⁴⁾ Possible up to 160 kW, over 200 kW not possible

⁵⁾ Not for frame size 315 and 355, 11th position of Article No. 0, 2, 4, 5 (2- ... 8-pole) 6 (6- and 8-pole)
⁶⁾ Not for frame size 315 and 355, 11th position of Article No. 6, 7 (2- and 4-pole motors) 7, 8 (6- and 8-pole motors)
⁷⁾ Not for frame size 280, 11th position of Article No. 0, 2, 6 (2- and 4-pole motors) 7, 8 (6- and 8-pole motors)

- Without additional charge
- With additional charge

1) The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
 2) The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
 3) In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).
 4) The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.

5) The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
 6) For machines, type of construction IM B5, provide an additional support foot at the NDE. The support foot is not included in the scope of supply. Use an appropriately sized support foot with the appropriate rigidity. The support foot must be able to support the total weight of the machine.
 7) Not possible for 2-pole 1LE55..-4BA motors.
 8) Motor installation only permitted as foot mounting. Flange must not be used as a motor supporting element.

Innomotics GP and Innomotics SD standard motors next generation

Overview

Couplings

The motor from Innomotics is connected to the machine or gear unit through a coupling. Flender is an important coupling manufacturer with a wide range of products.

For standard applications, Innomotics recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

Available from:

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany

Email: info@ottoroth.de

Foundation blocks according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation blocks that are bolted to the machine (without washers) and fitted with taper pins are not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Innomotics GP and Innomotics SD standard motors next generation

More information

Spare motors and repair parts

- _ Commitment to provide replacement motors and repair parts following delivery of the motor:
 - _ For up to 3 years after delivery of the original motor, in the event of total motor failure, Innomotics will supply a comparable replacement motor with regard to the mounting dimensions and functions (the type series may vary).
 - _ If a replacement motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - _ Replacement motors delivered after the active production of the machine series are also identified as spare motors on the rating plate.
 - _ Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - _ After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - _ For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Innomotics will provide information about spare parts and will supply documents when required.
- _ When repair parts are ordered, the following details must be provided:
 - _ Designation and part number
 - _ Article No. and factory number of the motor.
- _ For bearing types, see Catalog Section 1 "Introduction".
- _ For standard components, a commitment to supply repaired parts does not apply.

Notes on the dimensions

Overview

_ Dimension designations according to IEC 60072-1 and IEC 60072.

_ Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (IEC 60072-1) are machined with the following fits:

Dimension	ISO fit DIN ISO 286-2 designation	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension K: Nominal dimension according IEC 60072-1, negative deviation of tolerance H17 possible.

_ Dimensional tolerances

For the following dimensions, the admissible deviations are given below:

Dimension	Admissible designation deviation	
H	to 250	- 0,5
	over 250	- 1,0
E, EA		- 0,5

Keyways and feather keyways (dimensions GA, GC, F, and FA) are made in compliance with DIN 6885 Part 1.

_ All dimensions are specified in mm.

_ The overall width of the motor is identical to the "AC" dimension.

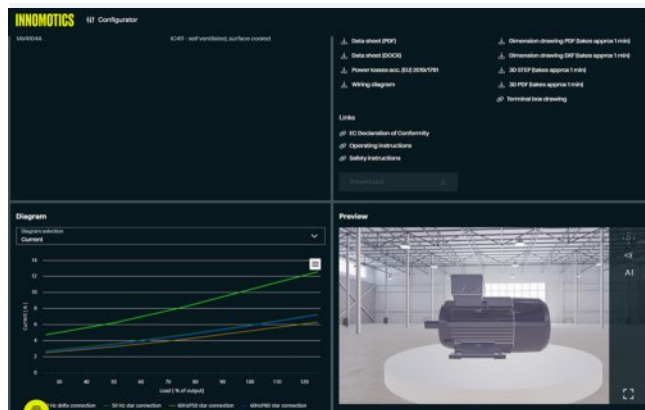

3

Dimension sheet generator (within the Innomotics Configurators)

Overview

A dimensional drawing can be created in the Innomotics Configurator for every configurable motor.

A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access

The Innomotics Configurator is integrated into the Siemens Industry Mall and can be used on the Internet without installation.

Innomotics VSD motors for converter operation

Overview

Innomotics GP/SD VSD motors optimized for converter operation (VSD = Variable Speed Drive)

In addition to the standard motors optimized for line operation, Innomotics also offers two motor lines optimized for converters for variable-speed operation on a frequency converter:

- _ Innomotics VSD10 line – induction motors for converter operation
- _ Innomotics VSD4000 line – reluctance motors for operation with SINAMICS G120/S120 converters

The motors are optionally available with an aluminum housing (Innomotics GP) or with a rugged cast-iron housing (Innomotics SD).

Innomotics VSD motors are characterized by the following features:

- _ High energy efficiency:
Because the Innomotics VSD motors are optimized for operation with SINAMICS converters, the system power losses are low and the energy efficiency therefore high. In particular, the Innomotics VSD4000 line synchronous reluctance motors in conjunction with optimized control algorithms result in excellent loss-optimized operation in the speed setting range with a full and partial load, and are superior to an induction motor system that has comparable nominal efficiency, especially in the partial-load range.
- _ Optimized investment costs:
The optimized motor active part/power module allocation results in low capital investment costs. The motors and frequency converters are optimally harmonized and coordinated with one another. No power unit upgrade is therefore required.
This applies in particular to the Innomotics VSD10 line motors

on account of their optimized motor design.

- _ Low space requirement, low weight:
The high power density and compact design ensure low space requirements combined with low weight.
- _ Very rugged and reliable:
High availability using the standard protection functions for converter operation.
As a result of the optimized insulation system, a high degree of reliability is obtained for four-quadrant operation with SINAMICS converters. Innomotics VSD10 motors also have insulated bearings at the non-drive end (NDE) in frame sizes 280 and 315.
- _ Fast and simple commissioning by transferring a motor code on the frequency converter.
- _ Flexible in use:
Innomotics VSD line motors are designed as standard for operation with a 50 Hz, 60 Hz and 87 Hz characteristic.
- _ Wide range of options:
By consistently utilizing the 1LE1 standard motor platform, almost all options of the 1LE1 line motors can also be used for the Innomotics VSD line motors.
- _ High level of compatibility:
Line and converter motors can be easily interchanged due to their identical dimensions and customer interfaces. The connection and operating philosophy is exactly the same as for 1LE1 line motors.
- _ International applicability:
The motors are not subject to any minimum efficiency requirements for specific countries.

4

Application

The Innomotics GP/SD VSD motors can be deployed in all industries and sectors, e.g. paper, steel, energy, chemistry, water/waste water.

The wide field of applications that can be addressed includes, for example, the following:

- _ Pumps
- _ Fans
- _ Compressors
- _ Cranes
- _ Conveyor belts

Design

The Innomotics GP/SD VSD motors are based on the platform of the Innomotics 1LE1 motor type series. For this reason, the principal design is the same as for the 1LE1 line motors – the mechanical parts are identical.

The motors are adapted to the converter by appropriately dimensioning the active part and VSD-specific rating plate data.

Moreover, a large number of the variations available in the Innomotics 1LE1 motors (types of construction, motor protection, terminal box position, and options) are also available for the VSD motors.

Innomotics VSD4000 line	Innomotics VSD10 line
Use in VSD applications with high dynamic requirements	Use in VSD applications
Focus on low operating costs	Focus on low investment costs
Very low system power losses due to the reluctance principle and optimum coordination of the motor with the converter	Low system power losses due to optimum coordination of the motor with the converter
Optimized for operation with SINAMICS G120 and S120	Optimized for use with SINAMICS G120, G130, G150
36 month warranty	_ 12 month warranty for Innomotics GP _ 24 month warranty for Innomotics SD (optionally expandable)

⁴⁾ 87 Hz characteristic not available for all frame sizes.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Overview

Innometrics GP/SD VSD4000 line motor series: 1FP10, 1FP15

As a result of their flexibility and the wide range of versions, Innometrics GP/SD VSD4000 line motors are especially suitable for sectors and industries, where the focus is on minimum lifecycle costs (TCO) and/or operation with a high dynamic performance.

4

Benefits

The Innometrics GP/SD VSD4000 line motor series has been specifically developed for operation with SINAMICS G120 converters.

- _ The synchronous-reluctance motors in conjunction with optimized closed-loop control algorithms result in an excellent, loss-optimized operating behavior in the speed control range at full and partial load. This system is superior to an induction motor-based system with comparable nominal efficiencies, especially in the partial load range.
- _ As a result of their low intrinsic moment of inertia, synchronous-reluctance motors are also especially suitable for operating modes demanding a high dynamic performance.
- _ The optimized motor active part/power module allocation results in low capital investment costs.
- _ The high power density and compact design ensure low space requirements combined with low weight.
- _ The motors and converters are optimally harmonized and coordinated with one another. It is not therefore necessary to upgrade the power unit.
- _ Innometrics GP motors with aluminum housing or Innometrics SD motors with rugged cast-iron housing are available.
- _ High availability using the standard protection functions for converter operation (Pt100/Pt1000 resistance thermometers).

Versions of the

Innometrics GP/SD VSD4000 line motor series: 1FP10, 1FP15

The motors have compact dimensions in a surface-cooled, enclosed version with self-ventilation. They have been specifically designed for converter operation.

1FP10 General Purpose for converter operation

- _ Four-quadrant converter operation, optimally harmonized with the SINAMICS G120, PM240-2 and S120 (ALM, BLM) drive system.
- _ IP55 degree of protection
- _ IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- _ Housing: Aluminum
- _ Frame sizes: 80/112 to 200 ¹⁾

1FP15 Severe Duty for converter operation

- _ Four-quadrant converter operation, optimally harmonized with the SINAMICS G120, PM240-2 and S120 (ALM, BLM) drive system.
- _ IP55 degree of protection
- _ IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- _ Housing: Cast iron
- _ Frame sizes: 80/112 to 200

- _ As a result of the optimized insulation system, a high degree of reliability is obtained for four-quadrant operation with SINAMICS converters.

- _ Fast and simple commissioning by transferring a motor code into the converter.
- _ Standard warranty period for synchronous-reluctance motors 36 months.

More power ratings

Innometrics GP/SD VSD4000 line motors are designed as standard for operation with a 50 Hz, 60 Hz, and 87 Hz characteristic ²⁾. No special ordering option is required.

Optimized for converter operation

The new motor series has been optimized for operation with SINAMICS G120 converters with regard to converter output currents and voltage utilization. Four-quadrant operation is possible with the SINAMICS G120, PM240-2, and S120 (ALM, BLM) converter families (for line voltages up to 480 V 3 AC).

High degree of flexibility

By consistently utilizing the 1LE1 standard motor platform, almost all options of the 1LE1 line motors can also be used for the Innometrics GP/SD VSD4000 line series.

¹⁾ For the motor type 1FP10 of the Innometrics GP series, frame sizes 180 and 200 on request.

²⁾ With firmware V4.7 SP3, only 1500 rpm can be programmed.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Benefits

Known and established design

Line and converter motors can be easily interchanged due to their identical dimensions and customer interfaces. The connection and operating philosophy is exactly the same as for 1LE1 line motors.

International applications

The motors are not subject to any minimum efficiency requirements for specific countries. As a consequence, they can be operated without additional MEPS certificates, also in the USA, for example.

System components

System components required:

- _ Innomatics 1FP1 synchronous-reluctance motor
- _ SINAMICS G120 converter PM240-2 Power Module or SINAMICS S120 (ALM, BLM) converter

Example configuration Innomatics GP/SD VSD4000 with SINAMICS G120

Application

As a result of the wide range of options, the Innomatics GP/SD VSD4000 line motor series can be used in all industrial areas and sectors. Paper, steel, energy, chemical, water/waste water are examples of some typical sectors.

Various flange and foot-mounted designs according to EN 60034-7 are available. IP55 is the standard degree of protection (other degrees of protection optionally available).

The wide field of applications that can be addressed includes, for example, the following:

- _ Pumps
- _ Fans
- _ Compressors
- _ Cranes
- _ Conveyor belts
- _ Processing machines that require synchronous operation (e.g. in the textile industry)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Design

The Innomatics GP/SD VSD4000 line motors are based on the 1LE1 platform. The basic design of the Innomatics GP/SD VSD4000 line motors therefore corresponds to the 1LE1 line motors. The mechanical parts are identical. The motors are adapted to the converter by appropriately dimensioning the active part.

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications.

Type of motor	IEC low-voltage three-phase synchronous-reluctance motors
Connection types	Star/delta connection The connection used depends on the particular load characteristic.
No. of poles	4
Frame sizes	80/112 ... 225
Rated power	4-pole: 0.55 ... 45 kW (50 Hz characteristic); 0.63 ... 52 kW (60 Hz characteristic), 0.9 ... 78 kW (87 Hz characteristic)
Frequencies	Characteristics for 50 Hz, 60 Hz and 87 Hz
Versions	Air-cooled, enclosed version: _ with self ventilation _ with forced ventilation (optional) Innomatics GP motors in an aluminum version, frame sizes 80/112 ... 200 Innomatics SD motors in a cast-iron version, frame sizes 80/112 ... 225
System efficiency	IES2 in accordance with EN 50598 (system with SINAMICS G120 converter, PM240-2)
Marking	Only permitted for converter operation. As converter motors, IE classification according to IEC 60034-30-1 is not required.
Rated speed	1500 rpm, 1800 rpm and 2610 rpm (up to frame size 200) 3000 rpm, 3600 rpm (frame sizes 180 and 200)
Rated torque	3.5 ... 191 Nm (50 Hz characteristic); 3.3 ... 183 Nm (60 Hz characteristic), 3.3 ... 176 Nm (87 Hz characteristic)
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class F, utilized acc. to B Reinforced insulation system (Advanced)
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP55 as standard Air-cooled, enclosed version
Cooling according to EN 60034-6 (IEC 60034-6)	_ Standard: Self-ventilated (IC411) _ Optional: Forced-air cooled (IC416) (132 ... 200)
Permissible coolant temperature and installation altitude	-20 ... +40 °C as standard, installation altitude up to 1000 m above sea level
Standard voltages according to EN 60038 (IEC 60038)	50 Hz line supplies: 400 V, 60 Hz line supplies: 480 V The rated motor voltage required is listed in the "Selection and ordering data" for the required motor.
Type of construction according to EN 60034-7 (IEC 60034-7)	_ Without flange: IM B3, IM B6, IM B7, IM B8, IM V5, IM V6 _ With flange: IM B35, IM V1, IM V3
Paint finish Suitability of paint finish for climate group according to IEC 60721, Part 2-1	As standard: color RAL 7030 stone gray
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A (normal)
Shaft extension according to DIN 748 (IEC 60072)	Balancing type: half-key balancing as standard
Sound pressure level according to EN ISO 1680 (tolerance +3 dB)	The corresponding sound pressure level is listed in the "Selection and ordering data" for the required motor.
Weights	The corresponding weight is listed in the "Selection and ordering data" for the required motor.
Modular mounting concept	Optional brake and separately driven fan according to ordering data
Options	See "Article No. supplements and special versions"

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

Rating plate

In accordance with EN 60034-1, the approximate total weight is specified on the rating plate. The standard version of the rating plate is the international version in English.

For straightforward and fast commissioning with SINAMICS G converters, a motor code number is stamped on the rating plate (CODE).

V		Hz	A	kW	cos φ	Nm	1/min	EFF	IE-CL	CODE
380 Y	50	34.0	15.0	0.71	95	1500	93.9	IE4	60035	
440 Y	60	33.5	7.3	0.72	92	1800	94.5			
430 Y	60	30.0	15.0	0.71	80	1800	94.1			
380 D	87	59	26.0	0.71	95	2610	94.1			

Example of a Innomatics GP VSD4000 line rating plate, 1FP10

Motors specially designed for converter operation

These motors have been specifically designed for converter operation. The catalog data is applicable for operation on the converter of the SINAMICS G120 series (PM240-2/PM240P-2) and SINAMICS S120 (PM240-2 and Booksize Motor Modules).

SINAMICS G120 system requirements:

- _ SINAMICS G120, PM240-2/PM240P-2 Power Module, CU230P-2 Control Unit
- _ V4.7.6 and higher
- _ The converter is operated with a rated pulse frequency of at least 4 kHz.
- _ The converter can provide the rated voltage as listed in the catalog.

For SINAMICS G120 converters (from firmware version 4.7) the Innomatics GP/SD VSD4000 line series can be selected in the SINAMICS converter via the STARTER software or the operator panel at the converter (Basic Operator Panel (BOP), Intelligent Operator Panel (IOP)) as motor category and can be addressed using the motor code number.

SINAMICS S120 system requirements:

- _ SINAMICS S120, PM240-2 Power Module and CU310
- _ SINAMICS S120 Booksize Motor Module and CU320-2
- _ FW 4.8 and higher

Rated voltage

The tolerance for the rated voltage is in accordance with EN 60034-1. A rated voltage range is not specified. The rated motor voltages are selected so that when operated with a SINAMICS G120 converter, the available voltage is optimally utilized.

Insulation

The motors can be operated with SINAMICS G/S converters up to line voltages of 480 V when the permissible voltage peaks are complied with ($\hat{U}_{LL} \leq 3200$ V, $\hat{U}_{LE} \leq 2800$ V).

For converter operation with the power ratings specified in the catalog, the motors can be utilized corresponding to thermal class 155 (F) (service factor 1.2).

Preferred supply system configurations are TT systems and TN systems with neutral-point grounding. In the case of a fault when connected to an IT system (ground fault), the insulation is excessively stressed. In this case, the process should be terminated as quickly as possible ($t < 2$ h), and the fault resolved. We do not recommend operation in corner-grounded TN systems.

Noise

The maximum sound pressure levels should be taken from the "Selection and ordering data".

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

Separately driven fan

For the technical specifications of the separately driven fans, see page 1/96 "Technical specifications of separately driven fans".

Bearings

For converter operation, as a result of the basic principle employed, electrical bearing stress is created through the bearing lubricant film due to a voltage that is capacitively coupled in.

The physical cause of this is the common-mode voltage at the converter output that is inherent in the control method for a converter:

The sum of the three phase voltages is – in contrast to pure line operation – not equal to zero at every point in time.

In order to apply currents to the motor which are sinusoidal as far as possible (resulting in smoother running, lower oscillation torques, and lower stray losses), a high pulse frequency is required for the converter's output voltage. The related (very steep) switching edges of the converter output voltage (and also, therefore, of the common-mode voltage) cause correspondingly high capacitive currents and voltages on the machine's internal capacitances.

In the worst-case scenario, the capacitive voltage induced via the bearing can lead to random arcing through the bearing lubricating film, thus causing premature bearing aging or damage.

This physical effect, which occurs in isolated cases, has mostly been observed in connection with larger motors.

EMC-compliant installation of the drive system is a basic prerequisite for preventing premature bearing damage via bearing currents.

The most important measures for reducing bearing currents are:

- _ Insulated motor bearing at the NDE.

Recommended from frame size 225 and higher:

- _ Use cables with a symmetrical cable cross-section:

- _ Preference given to a line supply with isolated neutral point (IT system).
- _ Using grounding cables with low impedance over a wide frequency range (DC up to approximately 70 MHz): for example, braided copper ribbon cables, HF finely stranded wires.
- _ Separate HF equipotential-bonding cable between motor housing and driven machine.
- _ Separate HF equipotential-bonding cable between motor housing and converter PE busbar.
- _ 360° HF contacting of the cable shield on the motor housing and the converter PE busbar. This can be achieved using EMC screwed glands on the motor side and EMC shield clips on the converter side, for example.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

Torque limits (continuous duty)

The thermal torque limit characteristics of the Innomatics GP/SD VSD4000 line define the maximum load torque for uninterrupted duty (S1) over the complete speed control range. The characteristics are different for all of the cooling methods. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

The following statements are valid for the following diagrams:

- Thermally, from $1/10$ of the rated speed up to the full rated speed, the rated torque and the curve of the suitable power unit are possible, utilizing the thermal class 155 (temperature class F).
- The curves of the next largest power unit and the maximum power curve can be achieved in continuous-operation periodic duty (S6 - x %), and briefly in S9 duty, provided that $P_2(S9) = P_{2N}$ is not exceeded.

Torque limit for Innomatics GP/SD VSD4000 line self-ventilated

Power limit for Innomatics GP/SD VSD4000 line self-ventilated

Maximum overload torques/thermal limit characteristic

The short-time maximum overload torque output from the motor is defined by the limit characteristic and the available converter output current.

Thermally, the motors can be permanent overloaded according to the F/F characteristic, see limit torque characteristics in the following catalog pages. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-0DB2 motor, frame size 80 with the particular motor voltage and circuit:

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1BF2 motor, frame size 112 with the particular motor voltage and circuit:

Torque limit for 380 VY (100 Hz characteristic)

Power limit for 380 VY (100 Hz characteristic)

4

Torque limit for 440 VY (120 Hz characteristic)

Power limit for 440 VY (120 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1CB0 motor, frame size 132 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1CB2 motor, frame size 132 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1CF0 motor, frame size 132 with the particular motor voltage and circuit:

Torque limit for 380 VY (100 Hz characteristic)

Power limit for 380 VY (100 Hz characteristic)

Torque limit for 440 VY (120 Hz characteristic)

Power limit for 440 VY (120 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1CF1 motor, frame size 132 with the particular motor voltage and circuit:

Torque limit for 380 VY (100 Hz characteristic)

Power limit for 380 VY (100 Hz characteristic)

4

Torque limit for 440 VY (120 Hz characteristic)

Power limit for 440 VY (120 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1DB2 motor, frame size 160 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1DB4 motor, frame size 160 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1DF2 motor, frame size 160 with the particular motor voltage and circuit:

Torque limit for 380 VY (100 Hz characteristic)

Power limit for 380 VY (100 Hz characteristic)

Torque limit for 440 VY (120 Hz characteristic)

Power limit for 440 VY (120 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1DF3 motor, frame size 160 with the particular motor voltage and circuit:

Torque limit for 380 VY (100 Hz characteristic)

Power limit for 380 VY (100 Hz characteristic)

4

Torque limit for 440 VY (120 Hz characteristic)

Power limit for 440 VY (120 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics GP/SD 1FP1.14-1DF4 motor, frame size 160 with the particular motor voltage and circuit:

Torque limit for 380 VY (100 Hz characteristic)

Power limit for 380 VY (100 Hz characteristic)

Torque limit for 440 VY (120 Hz characteristic)

Power limit for 440 VY (120 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-1EB2 motor, frame size 180 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-1EB4 motor, frame size 180 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-1EF2 motor, frame size 180 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-2AB5 motor, frame size 200 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-2AF4 motor, frame size 200 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-2AF5 motor, frame size 200 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-2BB0 motor, frame size 225 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-2BB2 motor, frame size 225 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Torque limit for 380 VΔ (87 Hz characteristic)

Power limit for 380 VΔ (87 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

The torque and power characteristics for converter configuration for the Innomatics SD 1FP1514-2BF2 motor, frame size 225 with the particular motor voltage and circuit:

Torque limit for 380 VY (50 Hz characteristic)

Power limit for 380 VY (50 Hz characteristic)

4

Torque limit for 440 VY (60 Hz characteristic)

Power limit for 440 VY (60 Hz characteristic)

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

Additional information

Mechanical stress and grease lifetime

When motors are operated at speeds above the rated speed, the mechanical smooth running operation and the bearings are subjected to greater mechanical stress. This reduces the grease lifetime and the bearing lifetime.

Above 100 Hz, the motors must be balanced for twice the rated frequency; it can be expected that the lubrication intervals and bearing lifetime are significantly reduced.

Motor protection

A motor protection function can be implemented using the I^2t sensing function implemented in the converter software. If required, more precise motor protection can be afforded by direct temperature measurement using PTC thermistors in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping.

Motor connection

When connecting the motors, it is important to consider the restrictions for 1LE1 line motors as well as the maximum conductor cross-sections permitted for the converter.

Operating data for 50 Hz/60 Hz/87 Hz characteristics

Innomotics GP/SD VSD4000 line motors are designed for operation with 50 Hz, 60 Hz and 87 Hz characteristics (87 Hz characteristic up to frame size 200).

Operation with the 50/60 Hz characteristic requires Y (star or wye) connection; operation with the 87 Hz characteristic requires Δ connection.

The corresponding performance data are stamped on the rating plate as standard. An ordering option is not required.

Operating characteristics of Innomotics GP/SD VSD4000 line motors ¹⁾

¹⁾ With V4.7 SP3, only a 50 Hz characteristic is possible.

Maximum operating speed

The maximum operating speed is limited by the mechanical speed limit of the motors as well as the available converter output frequency.

A significant increase in the sound pressure level can be expected when operating the motor above its rated speed (field weakening range).

Mechanical speed limits Innomotics GP/SD VSD4000 line:

Frame size	Mechanical speed limit		
	50 Hz		100 Hz
	Innomotics GP	SD	Innomotics SD
	n_{max} rpm	n_{max} rpm	n_{max} rpm
80	3200	3200	6000
90	3200	3200	6000
112	3200	3200	6000
132	3200	3200	5600
160	3000	3200	4800
180	2610	3000	4600
200	2610	3000	4500
225		3000	4500

International use

As special converter motors, Innomotics GP/SD VSD4000 line motors are presently not subject to any minimum efficiency requirements in the EU and USA/Canada. However, other national certificates may be required (e.g. CSA-S safety in Canada).

Note:

The converter recommendation applies to standard ambient conditions (40 °C; 1000 m above sea level).

If, as a result of different ambient conditions, the rated motor power is significantly reduced, under certain circumstances, another converter is the optimum solution. Here, please use the configuration options for converters in the Innomatics Configurator.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Technical specifications

System power loss acc. to IEC 61800-9-2: 2017

The drive system comprising Innomatics GP/SD VSD4000 line synchronous-reluctance motors and SINAMICS G120 converters is, as a result of the minimal system power losses, especially suitable for applications in the full and partial load range that are optimized to achieve minimum lifecycle costs.

General conditions:

- _ CU230P-2 Control Unit
- _ Line voltage: 400 V 3 AC 50/60 Hz
- _ Output voltage: Up to 0.95 x line supply input voltage
- _ Inverter pulse frequency:
4 kHz to 90 kW; 2 kHz from 110 kW

- _ In the standby mode, the converter does not supply any power to the motor (the inverter pulses are inhibited)
- _ In the standby operating mode, the Control Unit is operated from the internal or external 24 V DC electronics power supply
- _ Converters with vector control for synchronous-reluctance motors and flux reduction
- _ The operating points defined in the subsequent table already take into account the standby portions

¹⁾ Output frequency, rel. [%] referred to the rated speed/
torque, rel. [%] referred to the rated torque T_{rated} .

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

1FP1514-1DB42-1GF4-Z
H00

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and power and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- _ Complete Article No. and order code(s) or plain text
- _ If a quotation has been requested, please specify the quotation number in addition to the Article No.
- _ When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Structure of the Article No.:		Position:	1	2	3	4	5	6	7	-	8	9	10	11	12	-	13	14	15	16		
1st to 4th position: Digit, letter, letter, digit	Three-phase synchronous-reluctance motor Self-ventilated by fan mounted on and driven by the rotor		1	F	P	1																
5th position: Digit	Innomotics GP – aluminum housing Innomotics SD – cast-iron housing						0 5															
6th position: Digit	Standard version Gen 2							1														
7th position: Digit	Efficiency class Super Premium Efficiency								4													
8th and 9th position: Digit, letter	Motor frame size (frame size as a combination of shaft height and overall length, encoded)										0 ... 2	A ... E										
10th position: Letter	No. of poles B, F: 4-pole												B F									
11th position: Digit	Laminated core length												0 2 4 5									
12th and 13th position: 2 digits	Motor voltage and frequency 380 V 3 AC, 50 Hz/440 V 3 AC, 60 Hz/380 V 3 AC, 87 Hz														2							
14th position: Letter	Type of construction (encoded with A ... V)																		A ... V			
15th position: Letter	Motor protection (encoded with B ... Z; Z requires order code Q.. (e.g. Q3A))																			B ... Z		
16th position: Digit	Terminal box position 4: Terminal box top (normal version), 5: Terminal box right, 6: Terminal box left																				4 ... 6	
	Special order versions: encoded – additional order code required not encoded – additional plain text required																					Z

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Article number code

Selection and ordering data

Ordering example:

Selection criteria	Requirement	Structure of the Article No.
1FP10 motor type	Standard motor for converter operation Innomotics GP VSD4000 line, aluminum version, rated power at $P_{\text{rated } 50}$ with 15 kW, $P_{\text{rated } 60}$ with 17.3 kW or $P_{\text{rated } 87}$ with 23.5 kW	1FP1014-■■■■■-■■■■■
Motor frame size	160 L	1FP1014-1D■4■-■■■■■
No. of poles	4-pole	1FP1014-1DB4■-■■■■■
Motor voltage and frequency	380 V 3 AC, 50 Hz/440 V 3 AC, 60 Hz/380 V 3 AC, 87 Hz	1FP1014-1DB42-1■■■■■
Type of construction with special version	IM V5 with protective cover ¹⁾	1FP1014-1DB42-1C■-Z H00
Motor protection	Motor protection with PTC thermistors with 1 or 3 embedded temperature sensors for tripping	1FP1014-1DB42-1CB■-Z H00
Terminal box position	Terminal box right (viewed from DE)	1FP1014-1DB42-1CB5-Z H00

¹⁾ Standard without protective cover – the protective cover is defined with order code **H00** and must be ordered in addition to the Article No. with **-Z** and this order code.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Aluminum series Innomotics GP 1FP1014, line voltage 400 V, 50 Hz/480 V, 60 Hz/400 V, 87 Hz – self-ventilated

- ¹⁾ The types of construction IM B6/7/8, IM V6, and IM V5 with/without protective cover are also possible as long as no condensation drainage holes (order code **H03**) and no stamping of these types of construction on the rating plate are required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
²⁾ The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
³⁾ The "Second shaft extension" option (order code **L05**) is not possible.
⁴⁾ In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard version (without additional charge).

- ⁵⁾ The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no condensation drainage holes (order code **H03**) and no stamping of these types of construction on the rating plate are required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
⁶⁾ The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as no condensation drainage holes (order code **H03**) and no stamping of these types of construction on the rating plate are required. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Overview

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany
Phone +49 (5241) 7407-0
Fax +49 (5241) 7407-90

www.luetgert-antriebe.de
Email: info@luetgert-antriebe.de

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany
Phone +49 711 1388-0
Fax +49 711 1388-233

www.ottoroth.de
Email: info@ottoroth.de

Foundation blocks according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation blocks that are bolted to the machine (without washers) and fitted with taper pins are not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Available from:

Lütgert & Co. GmbH

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

More information

Replacement motors and repair parts

- _ Commitment to provide replacement motors and repair parts following delivery of the motor:
 - _ for up to 3 years after delivery of the original motor, in the event of total motor failure, Innomotics will supply a comparable spare motor with regard to the mounting dimensions and functions (the type series may vary).
 - _ if a spare motor is provided within the 3-year period, this will not mean that the warranty restarts.
 - _ Replacement motors delivered after the active production of the motor series are also identified as spare motors on the rating plate.
 - _ Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - _ after a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - _ for up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Innomotics will provide information about spare parts and will supply documents when required.
- _ When repair parts are ordered, the following details must be provided:
 - _ Designation and part number
 - _ Article No. and factory number of the motor.
- _ For bearing types, see Catalog Section 1 "Introduction".
- _ For standard components, a commitment to supply repaired parts does not apply.

You will find telephone numbers for other countries on our Internet site:
innomotics.com/hub/en/customer-service

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Notes on the dimensions

Overview

_ Dimension designations according to IEC 60072-1 and IEC 60072.

_ Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (IEC 60072-1) are machined with the following fits:

Dimension designation	ISO fit EN ISO 286-2	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension K: nominal dimension according IEC 60072-1, negative deviation of tolerance H17 possible

_ Dimensional tolerances

For the following dimensions, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250	- 0.5
	over 250	- 1.0
E, EA		- 0.5

Keyways and feather keyways (dimensions GA, GC, F and FA) are made in compliance with DIN 6885 Part 1.

_ All dimensions are specified in mm.

_ The overall width of the motor is identical to the "AC" dimension.

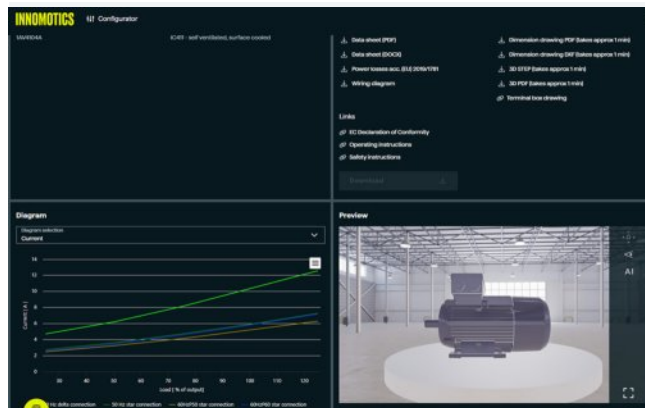

Synchronous reluctance motors for SINAMICS converters – VSD4000 line

Dimension sheet generator (within the Innomatics Configurators)

Overview

A dimensional drawing can be created in the Innomatics Configurator for every configurable motor.

A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access

The Innomatics Configurator can be used on the Internet without installation.

configurator.innomatics.com

Standard induction motors optimized for converter operation – VSD10 line

Overview

Innomotics GP/SD VSD10 line motor series:
1LE109, 1LE159

Innomotics GP/SD VSD10 line motors are suitable for all sectors of industry as a result of their flexibility and the wide range of versions available.

4

Versions of the
Innomotics GP/SD VSD10 line motor series: 1LE109, 1LE159

The motors are squirrel-cage induction motors with compact dimensions in a surface-cooled, enclosed version with self-ventilation. They have been specifically designed for converter operation.

1LE109 General Purpose for converter operation

- _ Four-quadrant operation with a converter, optimally coordinated to the SINAMICS G drive system. Can be operated with SINAMICS S (ALM, SLM) in four-quadrant operation.
- _ IP55 degree of protection
- _ IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- _ Housing: Aluminum
- _ Frame sizes 100 to 160

1LE159 Severe Duty for converter operation

- _ Four-quadrant operation with a converter, optimally coordinated to the SINAMICS G drive system. Can be operated with SINAMICS S (ALM, SLM) in four-quadrant operation.
- _ IP55 degree of protection
- _ IC411 cooling method, self-ventilated (IC416 cooling method, force-ventilated version optional)
- _ Housing: Cast iron
- _ Frame sizes 100 to 315

Standard induction motors optimized for converter operation – VSD10 line

Benefits

The Innomotics GP/SD VSD10 line motor series has been specifically developed for operation with SINAMICS G converters.

- _ Optimizing the assignment of the motor active part to the Power Module results in low capital investment costs.
- _ The high power density and compact design ensure low space requirements combined with low weight.
- _ An optimally harmonized drive system is created as the motor is optimally coordinated and harmonized with the converter. For instance, the converter does not have to be derated or there is low temperature rise.
- _ Optionally, Innomotics GP motors with an aluminum housing (frame sizes 100 to 160) or Innomotics SD motors with a rugged cast-iron housing (frame sizes 100 to 315) are available.
- _ High degree of availability based on standard protection functions for converter operation – Pt1000 resistance thermometers (all frame sizes) and NDE insulated bearings (frame sizes 280 and 315).
- _ As a result of the optimized insulation system, a high degree of reliability is obtained for four-quadrant operation with SINAMICS converters.
- _ Fast and simple commissioning by transferring a motor code into the converter.

More power ratings

Innomotics GP/SD VSD10 line motors are designed as standard for operation with a 50 Hz, 60 Hz, and 87 Hz characteristic (up to frame size 200). No special ordering option is required.

Optimized for converter operation

The new motor series has been optimized for operation with SINAMICS G120, G130, and G150 converters with regard to converter output currents and voltage utilization. Four-quadrant operation is possible without restrictions with the SINAMICS G120 and SINAMICS S120 converter families. The motors can also be operated on other SINAMICS converters (SINAMICS G120P, SINAMICS G120C, SINAMICS G120D).

High degree of flexibility

By consistently utilizing the 1LE1 standard motor platform, almost all options of the 1LE1 line motors can also be used for the Innomotics GP/SD VSD10 line series.

Known and established design

Line and converter motors can be easily interchanged due to their identical dimensions and customer interfaces. The connection and operating philosophy is exactly the same as for 1LE1 line motors.

International applications

The motors are not subject to any minimum efficiency requirements for specific countries. As a consequence, they can be operated without additional MEPS certificates, also in the USA, for example.

Standard induction motors optimized for converter operation – VSD10 line

Application

As a result of the wide range of options, the Innomotics GP/SD VSD10 line motor series can be deployed in all industrial areas and sectors. Paper, steel, energy, chemical, water/waste water are examples of some typical sectors.

Various flange and foot-mounted designs according to EN 60034-7 are available. IP55 is the standard degree of protection (other degrees of protection optionally available).

The wide field of applications that can be addressed includes, for example, the following:

- _ Pumps
- _ Fans
- _ Compressors
- _ Cranes
- _ Conveyor belts

Design

The Innomotics GP/SD VSD10 line motors are based on the 1LE1 platform. The principle design of the Innomotics GP/SD VSD10 line motors therefore corresponds to the 1LE1 line motors. The mechanical parts are identical. The motors are adapted to the converter by appropriately dimensioning the active part and VSD-specific rating plate data.

Technical specifications

Overview of technical specifications

This table lists the most important technical specifications.

Type of motor	Innomotics GP/SD VSD10 line IEC Low-Voltage Motors; three-phase induction motors
Connection types	Star/delta connection The connection used depends on the particular load characteristic.
No. of poles	2, 4
Frame sizes	100 ... 315
Rated power	_ 2-pole: 3 ... 90 kW (50 Hz characteristic); 3.45 ... 101 kW (60 Hz characteristic), 4.5 ... 12.5 kW (87 Hz characteristic) _ 4-pole: 2.2 ... 200 kW (50 Hz characteristic); 2.55 ... 230 kW (60 Hz characteristic), 3.7 ... 48 kW (87 Hz characteristic)
Frequencies	Characteristics for 50 Hz, 60 Hz and 87 Hz
Versions	Air-cooled, enclosed version: _ with self ventilation _ with forced ventilation (optional) Innomotics GP motors in an aluminum version, frame sizes 100 ... 160 Innomotics SD motors in a cast-iron version, frame sizes 100 ... 315
Marking	Only permitted for converter operation. As converter motors, IE classification according to IEC 60034-30-1 is not required.
Rated speed	_ 1500 rpm, 1800 rpm (up to frame size 315), and 2610 rpm (up to frame size 200) _ 3000 rpm, 3600 rpm (up to frame size 280), and 5220 rpm (up to frame size 112)
Rated torque	9.6 ... 1273 Nm (50 Hz characteristic); 9.2 ... 1220 Nm (60 Hz characteristic), 8.2 ... 176 Nm (87 Hz characteristic)
Insulation of the stator winding in accordance with EN 60034-1 (IEC 60034-1)	Temperature class F Reinforced insulation system (Advanced) up to 440 V motor connection voltage Special insulation system (Premium) up to 480 V motor connection voltage
Degree of protection acc. to EN 60034-5 (IEC 60034-5)	Standard IP55 optionally IP56 and IP65 Air-cooled, enclosed version
Cooling acc. to EN 60034-6 (IEC 60034-6)	_ Standard: Self-ventilated (IC411) _ Optional: Forced-air cooled (IC416)
Permissible coolant temperature and installation altitude	-20 ... +40 °C as standard, installation altitude up to 1000 m above sea level
Standard voltages acc. to EN 60038 (IEC 60038)	50 Hz line supplies: 400 V, 500 V, 690 V 60 Hz line supplies: 460 V, 600 V The rated motor voltage required is listed in the "Selection and ordering data" for the required motor.
Type of construction acc. to EN 60034-7 (IEC 60034-7)	_ Without flange: IM B3, IM B6, IM B7, IM B8, IM V5, IM V6 _ With flange: IM B5, IM B35, IM V1, IM V3
Paint finish	As standard: color RAL 7030 stone gray
Suitability of paint finish for climate group acc. to IEC 60721, Part 2-1	
Vibration severity grade acc. to EN 60034-14 (IEC 60034-14)	Grade A (normal)
Shaft extension acc. to DIN 748 (IEC 60072)	Balancing type: half-key balancing as standard
Sound pressure level acc. to EN ISO 1680 (tolerance +3 dB)	The corresponding sound pressure level is listed in the "Selection and ordering data" for the required motor.
Weights	The corresponding weight is listed in the "Selection and ordering data" for the required motor.
Modular mounting concept	Optional pulse encoder, brake, and separately driven fan according to ordering data
Options	See "Article No. supplements and special versions"

Standard induction motors optimized for converter operation – VSD10 line

Technical specifications

Rating plate

In accordance with EN 60034-1, the approximate total weight is specified on the rating plate. The standard version of the rating plate is the international version in English.

For straightforward and fast commissioning with SINAMICS G converters, a motor code number is stamped on the rating plate (CODE). The rated frequencies deviate, depending on the slip, from 50 Hz, 60 Hz, and 87 Hz.

Example of a rating plate for Innomatics GP VSD10 line

Motors specially designed for converter operation

These motors have been specifically designed for converter operation. The catalog data apply for operation with Siemens SINAMICS G and SINAMICS S converters.

When operated with an alternative converter, the catalog data apply (thermal torque limits, maximum overload torques), approximately for the following general conditions:

- _ Minimum rated pulse frequencies:
 - _ 4 kHz at 400 V, up to 90 kW
 - _ 2 kHz at 500 V to 690 V, up to 132 kW
 - _ 1.25 kHz at 500 V to 690 V, 160 and 200 kW
- _ The converter can provide the rated voltage as listed in the catalog.
- _ Permissible voltage peaks for reinforced insulation system (Advanced):

$$\hat{U}_{\text{phase-to-phase}} \leq 1600 \text{ V}, \hat{U}_{\text{phase-to-ground}} \leq 1400 \text{ V}, t_s > 0.1 \mu\text{s}$$
- _ Permissible voltage peaks for special insulation system (Premium):

$$\hat{U}_{\text{phase-to-phase}} \leq 2200 \text{ V}, \hat{U}_{\text{phase-to-ground}} \leq 1500 \text{ V}, t_s > 0.1 \mu\text{s}$$

For SINAMICS G120 converters (from firmware version 4.7 and higher), the Innomatics GP/SD VSD10 line can be selected as the motor category and addressed using the motor code No. in the SINAMICS converter using the STARTER software or at the converter operator panel (Advanced Operator Panel (AOP), Basic Operator Panel (BOP)).

Rated voltage

The tolerance for the rated voltage is in accordance with EN 60034-1. A rated voltage range is not specified. The rated motor voltages are selected so that when operated with a SINAMICS G120 converter, the available voltage is optimally utilized.

Insulation

The motors can be operated with line voltages up to 690 V 3 AC with SINAMICS G converters and SINAMICS S converters (uncontrolled and controlled infeed) when maintaining the permissible peak voltages specified above.

Depending on the selected motor connection voltage, a special insulation system is used for converter operation.

- _ Up to 440 V motor voltage (480 V line voltage) reinforced insulation system (Advanced)
- _ From 480 V motor voltage (500 V line voltage) special insulation system (Premium)

For converter operation with the power ratings specified in the catalog, the motors can be utilized corresponding to thermal class 155 (F) (service factor 1.0).

Preferred supply system configurations are TT systems and TN systems with neutral-point grounding. In the case of a fault when connected to an IT system (ground fault), the insulation is excessively stressed. In this case, the process should be terminated as quickly as possible ($t < 2 \text{ h}$), and the fault resolved. We do not recommend operation in corner-grounded TN systems.

Noise

The maximum sound pressure levels should be taken from the selection and ordering data.

Standard induction motors optimized for converter operation – VSD10 line

Technical specifications

Separately driven fan

For the technical specifications of the separately driven fans, see page 1/96 "Technical specifications of separately driven fans".

Bearings

To prevent bearing current damage, converter motors are equipped with insulated bearing cartridges at the NDE, available as standard for frame sizes 280 and 315.

Insulated NDE bearings are optionally available for frame sizes 100 to 250. We recommend their use depending on the particular plant or system.

For converter operation, as a result of the basic principle employed, electrical bearing stress is created through the bearing lubricant film due to a voltage that is capacitively coupled in.

The physical cause of this is the common-mode voltage at the converter output that is inherent in the control method for a converter:

The sum of the three phase voltages is – in contrast to pure line operation – not equal to zero at every point in time.

In order to apply currents to the motor which are sinusoidal as far as possible (resulting in smoother running, lower oscillation torques, and lower stray losses), a high pulse frequency is required for the converter's output voltage. The related (very steep) switching edges of the converter output voltage (and also, therefore, of the common-mode voltage) cause correspondingly high capacitive currents and voltages on the machine's internal capacitances.

In the worst-case scenario, the capacitive voltage induced via the bearing can lead to random arcing through the bearing lubricating film, thus causing premature bearing aging or damage.

This physical effect, which occurs in isolated cases, has mostly been observed in connection with larger motors.

EMC-compliant installation of the drive system is a basic prerequisite for preventing premature bearing damage via bearing currents.

The most important measures for reducing bearing currents are:

- _ Insulated motor bearing at the NDE.
- _ Use cables with a symmetrical cable cross-section:

- _ Preference given to a line supply with isolated neutral point (IT system).
- _ Using grounding cables with low impedance over a wide frequency range (DC up to approximately 70 MHz): for example, braided copper ribbon cables, HF finely stranded wires.
- _ Separate HF equipotential-bonding cable between motor housing and driven machine.
- _ Separate HF equipotential-bonding cable between motor housing and converter PE busbar.
- _ 360° HF contacting of the cable shield on the motor housing and the converter PE busbar. This can be achieved using EMC screwed glands on the motor side and EMC shield clips on the converter side, for example.

Standard induction motors optimized for converter operation – VSD10 line

Technical specifications

Torque limits (continuous duty)

The thermal torque limit characteristics of the Innomotics GP/SD VSD10 line define the maximum load torque for uninterrupted duty (S1) over the complete speed control range. The characteristics are different for all of the cooling methods. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

Torque limit characteristic for Innomotics GP/SD VSD10 line, self-ventilated

Power limit for Innomotics GP/SD VSD10 line, self-ventilated

Torque limit characteristic for Innomotics GP/SD VSD10 line, forced-air cooled

Power limit for Innomotics GP/SD VSD10 line, forced-air cooled

Standard induction motors optimized for converter operation – VSD10 line

Technical specifications

Maximum overload torques

The maximum overload torque output from the motor is defined by the overload torque characteristic over the complete speed control range. The reference variable is the breakdown torque at rated speed. The breakdown torque is calculated from the breakdown torque ratio and the rated torque. Operation at the maximum overload torque is only briefly permissible, for instance, when accelerating. The speed control range is limited by the mechanical speed limit, which depends on the motor's mechanical design.

Overload torque characteristic for Innomotics GP/SD VSD10 line

Standard induction motors optimized for converter operation – VSD10 line

Technical specifications

Additional information

Mechanical stress and grease lifetime

When motors are operated at speeds above the rated speed, the mechanical smooth running operation and the bearings are subjected to greater mechanical stress. This reduces the grease lifetime and the bearing lifetime.

Above 100 Hz, the motors must be balanced for twice the rated frequency.

Motor protection

A motor protection function can be implemented using the I^2t sensing function implemented in the converter software. If required, more precise motor protection can be afforded by direct temperature measurement using PTC thermistors, or Pt100/1000 resistance thermometers in the motor winding. Some converters from Siemens determine the motor temperature using the resistance of the temperature sensor. They can be set to a required temperature for alarm and tripping.

Motor connection

When connecting the motors, it is important to consider the restrictions for 1LE1 line motors as well as the maximum conductor cross-sections permitted for the converter.

Operating data for 50 Hz/60 Hz/87 Hz characteristics

Innomotics GP/SD VSD10 line motors are designed for operation with 50 Hz, 60 Hz and 87 Hz characteristics (87 Hz characteristic up to frame size 200).

Operation with the 50/60 Hz characteristic requires Y (star or wye) connection; operation with the 87 Hz characteristic requires Δ connection.

The corresponding power data are stamped on the rating plate as standard. An ordering option is not required.

Operating characteristics of Innomotics GP/SD VSD10 line motors

Maximum operating speed

The maximum operating speed is limited by the mechanical speed limit of the motors as well as the available converter output frequency.

A significant increase in the sound pressure level can be expected when operating the motor above its rated speed (field weakening range).

Mechanical speed limits Innomotics GP/SD VSD10 line:

Frame size	Mechanical speed limits for 1LE1.92 motors	
	2-pole n_{max} rpm	4-pole n_{max} rpm
100	5500	4200
112	5500	4200
132	4500	4200
160	4500	4200
180	4500	4200
200	4500	4200
225	4500	4500
250	3900	3700
280	3600	3000
315	-	2600

International use:

As special converter motors, Innomotics GP/SD VSD10 line motors are presently not subject to any minimum efficiency requirements in the EU and USA/Canada. However, other national certificates may be required (e.g. CSA-S safety in Canada).

Therefore, for use in USA, Canada and Mexico, we recommend:

Ordering with order code **D39** (version according to UL and CSA-S).

Note:

At the present time, national Chinese regulations regarding converter motors are being revised. A conclusive interpretation relating to the design still cannot be made. As a consequence, until further notice, for China we recommend that line motors suitable for converter operation are used with CEL (China Energy Label) (e.g. 1LE100, with order code **D34**).

Note:

The converter recommendation applies to standard ambient conditions (40 °C; 1000 m above sea level).

If, as a result of different ambient conditions, the rated motor power is significantly reduced, under certain circumstances, another converter is the optimum solution. Here, please use the configuration options for converters in the Innomatics Configurator.

Standard induction motors optimized for converter operation – VSD10 line

¹⁾ Output frequency, rel. [%] referred to the rated speed/
Torque, rel. [%] referred to the rated torque T_{rated}

Standard induction motors optimized for converter operation – VSD10 line

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

**1LE1592-1DB42-1GF4-Z
H00**

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and power and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- _ Complete Article No. and order code(s) or plain text
- _ If a quotation has been requested, please specify the quotation number in addition to the Article No.
- _ When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Structure of the Article No.:	Position:	1	2	3	4	5	6	7	-	8	9	10	11	12	-	13	14	15	16	
1st to 4th position: Digit, letter, letter, digit	Self-ventilated by fan mounted on and driven by the rotor	1	L	E	1															
5th position: Digit	Innomotics GP – aluminum housing Innomotics SD – cast-iron housing					0 5														
6th position: Digit	VSD10 line motor (motor for converter operation)							9												
7th position: Digit	Standard efficiency class																			
8th and 9th position: Digit, letter	Motor frame size (frame size as a combination of shaft height and overall length, encoded)									1 ... 3	A ... D									
10th position: Letter	No. of poles A: 2-pole B: 4-pole												A B							
11th position: Digit	Laminated core length												0 1 2 3 4 5							
12th and 13th position: 2 digits	Voltage and frequency ¹⁾ 380 V 3 AC, 50 Hz/440 V 3 AC, 60 Hz/380 V 3 AC, 87Hz 480 V 3 AC, 50 Hz/550 V 3 AC, 60 Hz/480 V 3 AC, 87Hz 660 V 3 AC, 50 Hz/660 V 3 AC, 87 Hz Non-standard winding, requires order code M.. (e.g. M1Y)													2 2 3 9			1 6 3 0			
14th position: Letter	Type of construction (encoded with A ... V)																	A ... V		
15th position: Letter	Motor protection (encoded with B ... Z; Z requires order code Q.. (e.g. Q3A))																		B ... Z	
16th position: Digit	Terminal box position 4: Terminal box top (normal version), 5: Terminal box right, 6: Terminal box left																		4 ... 6	
	Special order versions: encoded – additional order code required not encoded – additional plain text required																			Z

¹⁾ Depending on slip, the rated frequency is above 50 Hz, 60 Hz, or 87 Hz (see Technical specifications).

Standard induction motors optimized for converter operation – VSD10 line

1) The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

2) The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.

3) The "Second shaft extension" option (order code **L05**) is not possible.

4) In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard version (without additional charge).

5) Not possible for forced-air cooled motors with order code **F90** without external fan and fan cover.

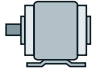

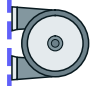

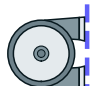

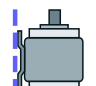

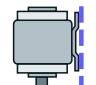

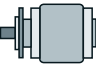

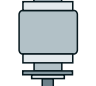

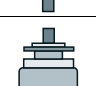

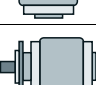

6) The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

7) The types of construction IM V19 and IM V18 with/without protective cover are also possible as long as there are no condensation drainage holes (order code **H03**) and these types of construction do not have to be stamped on the rating plate. As standard the type of construction IM B14 is then stamped on the rating plate. With type of construction IM V18 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.

Standard induction motors optimized for converter operation – VSD10 line

Overview

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany

Fax +49 (5241) 7407-90

www.luetgert-antriebe.de
E-Mail: info@luetgert-antriebe.de

Foundation blocks according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation blocks that are bolted to the machine (without washers) and fitted with taper pins are not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Available from:

Lütgert & Co. GmbH

Email: info@luetgert-antriebe.de

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany

Couplings

The motor from Innomotics is connected to the machine or gear unit through a coupling. Flender is an important coupling manufacturer with a wide range of products.

For standard applications, Innomotics recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended.

More information

Replacement motors and repair parts

- _ Commitment to provide replacement motors and repair parts following delivery of the motor:
 - _ For up to 3 years after delivery of the original motor, in the event of total motor failure, Innomotics will supply a comparable spare motor with regard to the mounting dimensions and functions (the type series may vary).
 - _ If a spare motor is provided within the 3-year period, this will not mean that the warranty restarts.
 - _ Replacement motors delivered after the active production of the motor series are also identified as spare motors on the rating plate.
 - _ Spare parts are offered only for these spare motors on request; repair and replacement are not possible.
 - _ After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - _ For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Innomotics will provide information about spare parts and will supply documents when required.
 - _ When repair parts are ordered, the following details must be provided:
 - _ Designation and part number
 - _ Article No. and factory number of the motor.
 - _ For bearing types, see Catalog Section 1 "Introduction".
 - _ For standard components, a commitment to supply repaired parts does not apply.
- You will find telephone numbers for other countries on our Internet site:
innomotics.com/hub/en/customer-service

Standard induction motors optimized for converter operation – VSD10 line

Notes on the dimensions

Overview

_ Dimension designations according to IEC 60072-1 and IEC 60072.

_ Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (IEC 60072-1) are machined with the following fits:

Dimension designation	ISO fit DIN ISO 286-2	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension K: nominal dimension according IEC 60072-1, negative deviation of tolerance H17 possible.

_ Dimensional tolerances

For the following dimensions, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250	- 0.5
	over 250	- 1.0
E, EA		- 0.5

Keyways and feather keyways (dimensions GA, GC, F, and FA) are made in compliance with DIN 6885 Part 1.

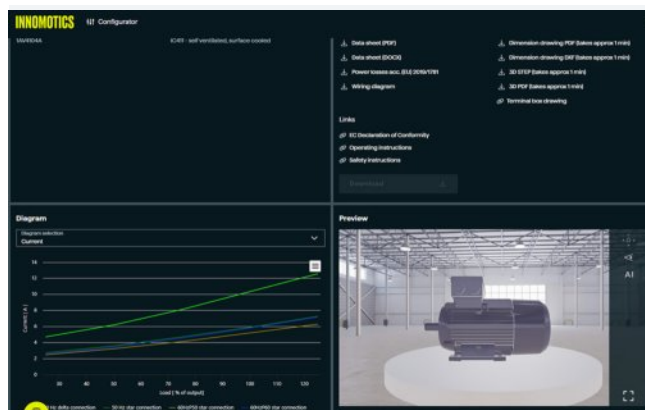

_ All dimensions are specified in mm.

_ The overall width of the motor is identical to the "AC" dimension.

Dimension sheet generator (within the Innomotics Configurators)

Overview

A dimensional drawing can be created in the Innomotics Configurator for every configurable motor. A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed.

The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access

The Innomotics Configurator can be used on the Internet without installation.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Overview

In many industrial and public sectors, explosion protection or explosion hazards are ever-present, e.g. in the chemicals industry, in refineries, on drilling platforms, at gas stations, in feed manufacturing and in sewage treatment plants.

The risk of explosion is always present when gases, fumes, mist or dust are mixed with oxygen in the air in an explosive ratio close to sources of ignition that are able to release the so-called minimum ignition energy.

In the chemical and petrochemical industries in particular, when crude oil and natural gas are transported, or in mining, milling (e.g. grain and granular solids), this can result in serious injury to persons and damage to equipment.

5

To ensure maximum safety in these areas, legislators in most countries have implemented appropriate stipulations in the form of laws and regulations based on national and international standards.

Explosion-protected equipment is designed such that an explosion can be prevented when it is used properly.

The explosion-protected equipment can be designed in accordance with various types of protection.

The local conditions must be subdivided into specified zones by the user with the assistance of the responsible authorities in accordance with the frequency of occurrence of an explosion hazard. Device (equipment) categories are assigned to these zones. The zones are then subdivided into possible types of protection and therefore into possible equipment (product) types.

Classification of zones

Areas subject to explosion hazard are divided into zones. Division into zones depends on the chronological and geographical probability of the presence of a hazardous, potentially explosive atmosphere. Information and specifications for classification of the zones are laid down in the following standards:

- _ IEC/EN 60079-10-1 for gas atmospheres
- _ IEC/EN 60079-10-2 for dust atmospheres

Further, a distinction is made between various explosion groups as well as temperature classes and these are included in the hazard assessment.

Depending on the particular zone and therefore the associated hazard, operating equipment must comply with defined minimum requirements regarding the type of protection. The different types of protection require corresponding measures to prevent ignition that should be implemented at the motor in order to prevent a surrounding explosive atmosphere from being ignited.

Overview of standards for explosion protection

The explosion-protected three-phase motors comply with European standards. The European standards are recognized by all member states of CENELEC (European Committee for Electrotechnical Standardization). The national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Spain, Sweden, Switzerland, Portugal, and United Kingdom (UK) are members of CENELEC.

Title	European standard

Equipment "Dust" (dust explosion protection by housing) "t"	EN 60079-31
Basic concepts and methodology	EN 1127-1

¹⁾ Motors of
- Zone 1 can also be used in Zone 2
- Zone 21 can also be used in Zone 22

²⁾ Motors that are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures are mixtures of flammable dusts with explosive gas/air atmospheres which can together create a dangerous explosive atmosphere if they occur at the same time. It is necessary for a competent assessor to determine and release in the individual case whether the parameters determining ignition are unfavorably affected in a particular hybrid mixture. Information on operation in hybrid mixtures is provided in IEC 60079-14.

³⁾ Innomatics XP motors with type of protection Ex tb are intended for group IIIC as a general rule, i.e. they are permitted for operation in environments with conductive and non-conductive dust.

⁴⁾ Innomatics XP motors with type of protection Ex tc are intended for group IIIB as a general rule, i.e. they are not permitted for operation in environments with conductive dust.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Overview

Temperature classes and groups

Combustible gases and vapors are divided into temperature classes according to their ignitability and into groups according to their spark ignition capacity. The marking of a three-phase motor with the codes for the type of protection, group and temperature class specifies that it can be used without danger in hazardous areas depending on the zone classification. The numerical sequence of the codes for the group and temperature class has been selected so that motors that satisfy the requirements for a certain group and temperature class also satisfy the requirements for lower

groups and classes.

Temperature classes

Temperature class of electrical equipment	Maximum surface temperature of electrical equipment	Ignition temperature of gases or vapors
T1	450 °C	> 450 °C
T2	300 °C	> 300 °C
T3	200 °C	> 200 °C
T4	135 °C	> 135 °C
T5	100 °C	> 100 °C
T6	85 °C	> 85 °C

Examples of the assignment of combustible gases and vapors

Explosion Protection Directive 2014/34/EU

Explosion protection has been fully harmonized by Directive 2014/34/EU in Germany and in the other member states of the European Union. The requirements of the new law came into force on April 20, 2016. Since then only those devices and protection systems that comply with Directive 2014/34/EU are permitted to be placed on the market.

Directive 2014/34/EU and Directive 1999/92/EC specify that only specific electrical equipment and devices are permitted to be used in the zones. The devices are assigned to equipment groups and categories.

Use of electrical equipment in accordance with EN 60079-14

Electrical equipment used in potentially explosive workshops and storage areas must comply with EN 60079-14/ VDE 0165-1 "Explosive atmospheres - Part 14: Electrical installations design, selection and erection". All other general regulations issued by the responsible supervisory authorities and the Employer's Liability Insurance Association or any specifically issued for individual case are also applicable. A plant or system subject to inspection is not permitted to be commissioned initially or following a significant modification until the plant or system has been inspected by an approved inspection agency for correctness of assembly, installation, site conditions and safe operation, taking into account the intended mode of operation. Devices compliant with Directive 2014/34/EU are permitted to be commissioned in accordance with the responsible supervisory authority. (cf. German Health and Safety at Work Regulations (BetrSichV), section 3, § 14)

¹⁾ Subgroups IIA, IIB and IIC must be specified for the types of protection Ex db, Ex eb and Ex ec described in this list in accordance with EN 60079-0.

²⁾ The minimum ignition temperature depends on the composition and lies between 220 to 300 °C, over 300 °C in special cases.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Overview

Device marking

The equipment group and category are specified in the device marking.

The device marking is defined as follows:

e.g. CE 1026  II 2G Ex eb IIC T3 Gb

– **CE** conformity marking

CE stands for "Communautés Européennes" (European Communities)

The manufacturer of the explosion-protected devices declares by means of CE marking that the relevant product has been manufactured in accordance with all applicable regulations and requirements of the EU and the requirements laid down in Directive 2014/34/EU and the product has been subjected to the relevant conformity evaluation process.

– **0158** identification number of the inspecting authority (DEKRA)

–  Marking for prevention of explosions in accordance with Directive 2014/34/EU

Example "increased safety":

	CE	1026		II	3	G	Ex	ec	IIC	T3	Gc
CE marking											
Number of the certifying "notified" body (1026 = FTZÜ)											
Explosion protection marking											
Equipment group: I = Underground II = All other areas											
Category: 2 (Zone 1/21) 3 (Zone 2/22)											
Ex atmosphere G = Gas D = Dust											
Explosion-protected equipment											
Type of protection Ex db, db eb, eb, ec, tb or tc (db eb = motor housing Ex db with terminal box Ex eb)											
Explosion group and explosion subgroup II = Gas (IIA, IIB or IIC) III = Dust (IIIA, IIIB or IIIC)											
Temperature class with max. surface temperature T1 = 450 °C T4 = 135 °C T2 = 300 °C T5 = 100 °C T3 = 200 °C T6 = 85 °C											
Equipment protection level (G = Gas; D = Dust): Ga = Very high protection, Da = Very high protection, Gb = High protection, Db = High protection, Gc = Increased protection, Dc = Increased protection											

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Overview

Overview of Innomotics XP 1MB1, 1MB5 explosion-protected motors

The table below contains a complete overview of our products, their types of protection and the assignment of motor types to categories. It is important to note that

depending on whether the motor is used for converter operation or line operation, different order codes are required for unique selection of the required product.

Sector	Category	Zone	Frequency of occurrence of the Ex atmosphere	Type of protection	Temperature class	Equipment protection level	Degree of protection	Motor type and if applicable order code	Operation	Order code	Utilization acc. to temperature class	Standard	
Gases and vapors (G)	1G	0	constantly or long-term	Not admissible with low-voltage motors									
	2G	1	occasionally	Ex db eb IIC ¹⁾ (flameproof enclosure)	T1 – T4	Gb	IP55	1MB1.5,	Line	-	130 (B)	IEC/EN 60079-0	
								1MB5.5					Converter
									1MB1.6	-	-	155 (F)	IEC/EN 60079-7

								1MB163 + B30					B41+
									B43				

¹⁾ Highest explosion group IIC includes IIB and IIA. IIA stands for Iint, IIIB for non-conductive dust and IIIC for conductive dust. 1MB1.5, 1MB5.5 motors optionally with Ex db terminal box.

²⁾ See EU type-examination certificate.

³⁾ Motors that are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures are mixtures of flammable dusts with explosive gas/air atmospheres which can together create a dangerous explosive atmosphere if they occur at the same time. It is necessary for a competent assessor to determine and release in the individual case whether the parameters determining ignition are unfavorably affected in a particular hybrid mixture. Information on operation in hybrid mixtures is provided in IEC 60079-14.

⁴⁾ For 1MB1 IE1: T140 °C
IE2: T120 °C (except T130 °C for 1MB1.11-1AD5, 1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6)
IE3: T120 °C.
For 1MB5 frame sizes 400 and 450: T125 °C.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Benefits

The explosion-protected motors from Innomotics offer the user numerous advantages:

- _ The motors are designed and constructed in accordance with Directive 2014/34/EU. As product supplier, Innomotics accepts responsibility for compliance with the applicable product standards for the selected equipment.
- _ By using this product, the plant operating company complies with Directive 1999/92/EC in accordance with Appendix II B (ATEX 137 previously ATEX 118a). The plant manufacturer or plant operating company is responsible for correct selection and proper usage of the equipment.
- _ Comprehensive series of Ex motors for protection against gas and dust.
- _ Individual versions of motors are possible thanks to the numerous catalog options.
- _ Further special versions are possible on request.
- _ Declarations of compliance with the order 2.1 are available for a defined spectrum of Innomotics motors/Siemens converters.
- _ The operating instructions are available in all official EU languages as well as Russian, Turkish and Chinese for downloading.
- _ Printed safety notes in German/English are supplied as standard with each motor.
- _ Certificates:
 - ATEX, IECEX, CCC-Ex, EACEX, PESO
- _ VIK design (see chapter 1 page 1/23)

For applications in harsh environments: Innomotics XP motors with a cast-iron housing

The right motor for various challenges

The following motor series are available with cast-iron housings for applications in harsh, hazardous environments:

- _ **Basic Line:**
Rugged, reliable motors for machine construction
- _ **Performance Line:**
Motors for the process industry with reinforced bearings and a more rugged coating – for requirements that extend beyond the Basic Line

Comparison: Basic Line versus Performance Line

Function	Basic Line – 1MB15	Performance Line – 1MB16
Bearing size	62, 63 from frame size 280 upwards	63
Relubrication	Optional, standard from frame size 280 upwards	Standard from frame size 160 upwards, optional for frame sizes 100 to 132
Paint system	Standard paint finish, corrosivity category C2	Special paint finish, corrosivity category C3
Drainage	Drain plug from frame size 100 upwards	Drain plug from frame size 100 upwards
Rating plate made of stainless steel	Standard from frame size 225 upwards, optional for frame sizes 71 to 200	Standard from frame size 100 upwards
Motor protection	Optional	PTC
Fan cover	Steel	Steel
Warranty	12 months	36 months

Application

The explosion-protected motors are used in the following sectors to prevent explosion hazards that result in serious injury to persons and severe damage to equipment.

- _ Chemical and petrochemical industry
- _ Production of mineral oil and gas
- _ Gas works
- _ Gas utility companies
- _ Gas stations
- _ Coking plants
- _ Mills (e.g. grain, solids)
- _ Sewage treatment plants
- _ Wood processing (e.g. sawdust, tree resin)
- _ Other industries subject to explosion hazards

Innomotics XP CHEMSTAR - industry-specific motor solution for Chemie, Petrochemie, Oil & Gas

see chapter 1 page 1/23

Technical specifications

General information

Ex motors are suitable for operation in electrical power systems with a voltage tolerance of $\pm 10\%$ according to EN 60034-1.

Ex motors in vertical type of construction with shaft extension pointing down must have a protective cover.

Standard certificate: EU type-examination certificate (ATEX), installation declaration and EU declaration of conformity, optionally IECEX, CCC-Ex and EACEX.

Printed safety notes are supplied as standard with explosion-protected motors. Operating instructions are also available in all official EU languages as well as in Russian, Turkish, and Chinese.

Ambient temperature

- _ Standard: -20 to +40 °C
- _ Optional: -40 to +40 °C (order code **D03**)
- _ Optional: -20 to +60 °C (order codes **N05, N06, N07, N08**)
- _ Optional: -55 to +40 °C (order code **D05**)

From 40 °C, the power is reduced. Other temperatures are available on request.

Note on Ex eb (1MB1.4):

Order codes **N05, N06, N07, N08** currently on request.

Motor connection

1MB1 and 1MB5 motors must be sealed with certified cable glands or sealing plugs.

The certificates for the motors for hazardous areas are stored with the documentation in the Innomotics Configurator.

Certified motor protection switches/tripping units must always be used for motor protection, see Catalog IC 10.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Type of protection "Dust explosion protection" Ex tb, Ex tc acc. to IEC/EN 60079-31 for use in Zone 21, Zone 22.

The types of protection **Ex tb** and **Ex tc** apply to electrical equipment protected using a housing and with limited surface temperature for use in areas in which combustible dust can be present in concentration levels that could cause a fire or an explosion.

Measures are taken to prevent impermissibly high temperatures and to prevent sparks or arcs from occurring on external components of the motor.

Ex tb motors are used in areas where it is expected that an explosive atmosphere comprising dust/air mixtures will be present occasionally and for a short period. These motors are assigned to Equipment Group II – Category 2D (corresponding to Zone 21). Innomotics XP motors with type of protection Ex tb are intended for group IIIC, i.e. they are permitted for operation in environments with conductive and non-conductive dust.

Ex tc motors are used in areas where it is expected that a potentially-explosive atmosphere will be caused by dust that is stirred up. If this does occur, in all probability rarely and for a short period. These motors are assigned to Equipment Group II – Category 3D (corresponding to Zone 22). Innomotics XP motors with type of protection Ex tc are intended for group IIIB as a general rule, i.e. they are permitted for operation in environments with non-conductive dust.

Ex tb IIIC T120 °C Gb for use in Zone 21:

Design for Zone 21, as well as Zone 22 for conductive dust (degree of protection: IP65) equipment category 2D. Motors Ex tb IIIC T120 °C Db: 1MB1.1 and 1MB5.1 are suitable for use in explosive dust atmospheres with conductive or non-conductive dust that are present occasionally (Zone 21) or rarely (Zone 22). For rated operation, the surface temperature is 120 °C.

Ex tc IIIB T120 °C Gc for use in Zone 22:

Version for Zone 22 with non-conductive dust (degree of protection IP55) equipment category 3D. Motors Ex tc IIIB T120 °C Dc: 1MB1.2 and 1MB5.2 are suitable for use in explosive dust atmospheres with non-conductive dust that are present rarely (Zone 22). For rated operation, the surface temperature is 120 °C.

For use in Zone 22 and in combination with conductive dust (e.g. carbon dust), the motor for Zone 21 must be selected.

The motors have a terminal box, a sealing system, an external grounding terminal, a metal fan cover and a metal external fan according to standard IEC/EN 60079-0.

Identification on the rating plate:

- _ Zone 21:  II 2D Ex tb IIIC T120 °C Db
- _ Zone 22:  II 3D Ex tc IIIB T120 °C Dc

Number of the EU type-examination certificate

Pole-changing versions:

- _ Ex tb (Zone 21): Not possible
- _ Ex tc (Zone 22): Possible on request.

For special motor design or operation at higher ambient temperatures from +45°C to +60°C, a surface temperature of 130°C is confirmed.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Type of protection "increased safety" Ex ec acc. to IEC/EN 60079-7 for use in Zone 2

Type of protection **Ex ec** ensures that a motor in normal operation as well as when operated under deviating conditions as specified in the standard is not able to ignite a surrounding explosive gas atmosphere. The maximum surface temperature that can occur during operation must be below the limit temperature of the temperature class marked on the motor, e.g. T3.

Measures are taken to prevent impermissibly high temperatures and to prevent sparks or arcs from occurring on the inside and on external components of the motor.

Motors with type of protection **Ex ec** are used in an explosive atmosphere where this atmosphere is expected to reach a level that poses a risk **only rarely** and then also **only for a short period**. These motors are assigned to Equipment Group II – Category 3G (corresponding to Zone 2).

Ex ec motors can additionally optionally have type of protection Ex tc with Group IIIB (non-conductive dust) acc. to IEC/EN 60079-31 for use in Zone 22 (present rarely).

Ex ec IIC T3 Gc

→ Standard version for paint film thicknesses < 200 µm.

Optional available special paint with layer thicknesses over 200 µm are tested for explosion protection and can also be used.

Optional **Ex ec IIB T3 Gc** (order code **B31**)

→ Optional version for paint film thicknesses > 200 µm to < 2 mm.

For further information about paint and paint film thicknesses, see page 1/15 onwards.

Optional type of protection **Ex ec/Ex tc** for use in Zone 2/22 ¹⁾

The motors must be ordered with:

Version additionally for dust Ex tc - Zone 22 – order code **B30** ¹⁾

Motors

_ Ex ec IIC T3 Gc: 1MB1.3 and 1MB5.3

_ Ex ec IIB T3 Gc: 1MB1.3 and 1MB5.3 (order code **B31**)

have a terminal box (similar to Ex eb), a sealing system, an external grounding terminal and a metal fan cover according to standard IEC/EN 60079-0. The temperature class is T1-T3.

With optional order with order code **B30** additionally a metal external fan.

The combination **B30+B31** is possible.

identification on the rating plate:

_ Zone 2:  II 3G Ex ec IIC T3 Gc

_ Zone 2/22:  II 3G Ex ec IIC T3 Gc

 II 3D Ex tc IIIB T120 °C Dc ¹⁾

Number of the EU type-examination certificate

Please inquire in the case of:

_ Utilization according to temperature class 155 (F)

_ For pole-changing versions

Note:

Motors that are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures are mixtures of flammable dusts with explosive gas/air atmospheres which can together create a dangerous explosive atmosphere if they occur at the same time. It is necessary for a competent assessor to determine and release in the individual case whether the parameters determining ignition are unfavorably affected in a particular hybrid mixture. Information on operation in hybrid mixtures is provided in IEC 60079-14.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Type of protection "increased safety" Ex eb acc. to IEC/EN 60079-7 for use in Zone 1

With type of protection **Ex eb**, additional measures are taken to prevent the possibility of high temperatures and to prevent sparks or arcs from occurring on the inside and on external components of the motor.

In case of a malfunction, the drive must be switched off within the time t_E . This ensures that none of the motor's components reaches the ignition temperature of the surrounding gas in the event of a malfunction. The t_E time is the time interval in seconds within which an AC rotor or the stator winding heats up to its limit temperature through the locked-rotor current I_A from the temperature in the rated operation with the highest permissible ambient temperature.

Motors with type of protection **Ex eb** are used in an explosive atmosphere where a hazardous explosive atmosphere is expected occasionally to reach a level that poses a risk. These motors are assigned to Equipment Group II – Category 2G (corresponding to Zone 1). They ensure a high degree of safety.

Optionally Ex eb motors can additionally have type of protection Ex tb with Group IIIC (conductive and non-conductive dust) acc. to IEC/EN 60079-31 for use in Zone 21 (occasionally present).

Ex eb IIC T3 Gb

→ Standard version for paint film thicknesses < 200 µm.

Optional available special paint with layer thicknesses over 200 µm are tested for explosion protection and can also be used.

Optional Ex eb IIB T3 Gb (order code **B31**)

→ Optional version for paint film thicknesses > 200 µm to < 2 mm.

For further information about paint and paint film thicknesses, see page 1/15 onwards.

Optional type of protection Ex eb/Ex tb for use in Zone 1/21

The motors must be ordered with:

Version additionally for dust Ex tb - Zone 21 – order code **B32**

Motors

_ Ex eb IIC T3 Gb: 1MB1.4 and 1MB5.4

_ Ex eb IIB T3 Gb: 1MB1.4 and 1MB5.4 (order code **B31**)

have a terminal box (Ex eb), a sealing system, an external grounding terminal and a metal fan cover according to standard IEC/EN 60079-0. The winding is specially designed and tested for the temperature class T1/T2 or T3.

With optional order with order code **B32** additionally a metal external fan.

The combination **B32+B31** is possible.

Identification on the rating plate:

- _ Zone 1:  II 2G Ex eb IIC T3 Gb
- _ Zone 1/21:  II 2G Ex eb IIC T3 Gb
-  II 2D Ex tb IIIC T120 °C Db ¹⁾

Number of the EU type-examination certificate

Please inquire in the case of:

- _ Increased coolant temperatures
- _ Marine certificates

Note:

Motors that are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures are mixtures of flammable dusts with explosive gas/air atmospheres which can together create a dangerous explosive atmosphere if they occur at the same time. It is necessary for a competent assessor to determine and release in the individual case whether the parameters determining ignition are unfavorably affected in a particular hybrid mixture. Information on operation in hybrid mixtures is provided in IEC 60079-14.

¹⁾ Analog for dust explosion-protected motors: T130 °C for 1MB1.11-1AD5, 1MB1.11-3AD6, 1MB1.21-1AD5 and 1MB1.21-3AD6

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Type of protection "flameproof enclosure" Ex db eb and Ex db acc. to IEC/EN 60079-1 for use in Zone 1

Type of protection **Ex db** is achieved by ensuring that any explosion is contained within the motor. The housing must resist the pressure of the explosion and also prevent ignition from the internal to the external atmospheres.

Motors with type of protection **Ex db** are used in an explosive atmosphere where a hazardous explosive atmosphere is expected occasionally to reach a level that poses a risk. These motors are assigned to Equipment Group II – Category 2G (corresponding to Zone 1). They ensure a high degree of safety.

To define the risk posed by a potentially explosive gas, the minimum ignition temperature of a dust cloud is required as well as details of the possibility of a flame exiting through a narrow slit in the motor housing. This is achieved by classification in explosion groups IIA, IIB and IIC, whereby IIC represents the highest requirements (see the table "Assignment of combustible gases and vapors").

Ex db eb IIC T4 Gb

→ Standard version for paint film thicknesses < 200 µm.

Optional available special paint with layer thicknesses over 200 µm are tested for explosion protection and can also be used.

Ex db eb IIB T4 Gb or Ex db eb IIC with order code **B31**

→ Optional version for paint film thicknesses > 200 µm to < 2 mm.

Alternatively, a paint finish certified in accordance with the Ex Directive can be used. For further information about paint and paint film thicknesses, see page 1/15 onwards.

Optional type of protection

_ **Ex db eb/Ex tb** for use in Zone 1/21

_ **Ex db eb/Ex tc** for use in Zone 1/22

The motors must be ordered with:

_ Version additionally for dust Ex tb IIIC - Zone 21 – order code **B32**

_ Version additionally for dust Ex tc IIIB - Zone 22 – order code **B30**

Motors

_ Ex db eb IIC T4 Gb: 1MB1.5 and 1MB5.5

_ Ex db eb IIB T4 Gb: 1MB1.5 and 1MB5.5 with order code **B31**

_ Ex db eb IIB T4 Gb: 1MB1.6 and 1MB5.6

are suitable for use in explosive gas atmospheres with occasionally present gases or vapors in Zone 1 for temperature classes T1 to T4. The maximum surface temperature that can occur during operation must lie below the limit temperature of the respective temperature class.

The motors have a terminal box (Ex eb), optional Ex db (order code **R48**), a sealing system, an external grounding terminal and a metal fan cover according to standard IEC/EN 60079-0. The motor housing is designed with type of protection "flameproof enclosure" and has temperature class T4.

With optional order with order code **B30** and **B32** additionally a metal external fan.

The combination **B32+B31** is possible.

Example of identification on the rating plate:

_ Zone 1:  II 2G Ex db eb IIC T4 Gb or

 II 2G Ex db IIC T4 Gb (R48)

_ Zone 1/21:  II 2G Ex db eb IIC T4 Gb

 II 2D Ex tb IIIC T130 °C Db

Number of the EU type-examination certificate

Note:

Motors that are certified for gas or dust protection must not be used in hybrid mixtures! Hybrid mixtures are mixtures of flammable dusts with explosive gas/air atmospheres which can together create a dangerous explosive atmosphere if they occur at the same time. It is necessary for a competent assessor to determine and release in the individual case whether the parameters determining ignition are unfavorably affected in a particular hybrid mixture. Information on operation in hybrid mixtures is provided in IEC 60079-14.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Line operation

Insulation system

The insulation system of Innomotics XP 1MB1 and 1MB5 motors is suitable for line voltages up to 690 V. The connection system (terminal box, terminals) is also designed for this rated voltage.

The motors are equipped with 6 terminals. They can therefore be operated in any star or delta connection. If a voltage variant with dual voltage e.g. 400V Δ /690V Y is selected, the rated data of all voltage levels will be stamped on the rating plate.

Innomotics XP 1MB1 and 1MB5 motors have an insulation system with a thermal class of 155 °C (F). Utilization at rated operation corresponds to thermal class 130 °C (B).

For deviations in use for frame sizes 400 and 450, see "Winding and insulation version with regard to temperature class", on page 1/33.

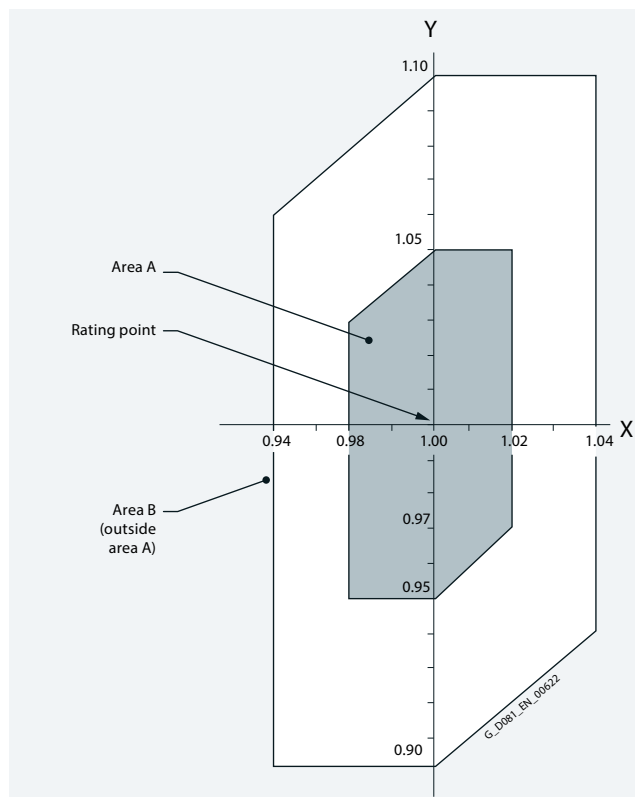

Voltage tolerances

The motors are suitable for operation with voltage and frequency tolerances according to EN 60034-1.

According with requirements of explosion protection, the following must also be ensured by testing that the permissible temperature limits for the inner and outer surfaces of the motor according to the relevant standard are not exceeded during continuous operation at the voltage limits ($\pm 10\%$). For 8-pole motors of frame size 450, continuous duty is only possible with $\pm 5\%$.

Note:

Tolerances according to EN 60034-1; for reliable operation, a max. combined voltage and frequency tolerance $\pm 10\%$ is recommended

Y-axis: Voltage tolerance

Z-axis: Frequency tolerance

Motor protection

Motor protection must always be realized with a certified motor circuit breaker, see Catalog IC 10, taking into account the inrush current ratio and the maximum startup time.

For 1MB1 motors with flameproof protection Ex db, as protection by PTC thermistors only is possible on request.

Note:

For Ex eb motors in line operation, motor protection is alternatively possible as protection by PTC thermistors only, taking into account the inrush current ratio $I_{startup}/I_{rated}$ and time t_E .

When the motor shaft is locked, the motor circuit breaker must disconnect the motor from the line supply within time t_E so that the maximum ignition temperature of the specific temperature class is not exceeded. Optionally on some motors up to frame size 200, full motor protection with a PTC thermistor is possible. The information about full motor protection with a PTC thermistor is documented in the EU type-examination certificate. The tripping devices required for this purpose, see Catalog IC 10, must always be certified.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Operation on a frequency converter

General information

Basically, explosion-protected motors (except for Ex eb) can be fed from converters. Particular attention must be paid to the interaction between the motor and converter system, especially with regard to the following aspects:

- _ The harmonic content of the supply voltage raises the motor temperature, so the motor power must be reduced
- _ Less cooling of the motor at speeds below the rated speed
- _ Voltage stress on the motor winding
- _ Bearing currents

The general use of high-quality insulation systems enables converter operation. When operated with a converter, the motor with explosion protection must be fitted with order code **B40, B41, B43 or B44** and with PTC thermistors – (15th position of Article No. **A** or **B**) order code **Q11** or **Q12**. These are installed in the stator winding and, in combination with an ex-certified trip unit (EU type-examination certificate), they perform sole motor protection in the case of converter operation.

The permissible speed and torque range is stamped on an additional rating plate.

These rated operating points stamped on the additional rating plate apply for both constant torque drives and fluid-flow machines with a square-law load torque. For constant torque drives, the resulting thermal motor torques in the positioning range must be taken into account.

During converter operation, the reduced torques for constant torque and drives for fans, pumps and compressors must be observed due to the harmonic content of the supply. This data is available in the Innomotics Configurator at configurator.innomotics.com

Higher noise levels must be expected than for 50 Hz line operation for motors operating with converters due to the harmonic content of the supply.

Maximum voltage stress on the motor winding in converter operation:

Frame sizes: 71 to 355:

- _ $\hat{U}_{\text{phase-to-phase}} \leq 1500 \text{ V}$ (3000 V peak-peak values ($V_{\text{pk/pk}}$)) converter voltage up to 500 V
- _ $\hat{U}_{\text{phase-to-ground}} \leq 1100 \text{ V}$ (2200 V peak-peak values ($V_{\text{pk/pk}}$))

The following generally applies to motor-converter systems:

- _ $U_{\text{line}} \leq 480 \text{ V} \pm 10 \%$ (BLM = Basic Line Module; DFE = Direct Front End)
- _ $U_{\text{line}} \leq 460 \text{ V} \pm 10 \%$ (ALM = Active Line Module; AFE = Active Front End); $U_{\text{dc}} < 750 \text{ V}$
- _ $U_{\text{line}} = 500 \text{ V to } 690 \text{ V} \pm 10 \%$
Ex db, Ex ec, Ex tb, Ex tc with measures to reduce peak voltages to a maximum of 1600 V (3200 V peak-to-peak values ($V_{\text{pk/pk}}$)) permissible; e.g. by means of suitable filters, valid for SINAMICS (B40/B41) and without reference to the converter make (B43/B44)

Motors of the 1MB55 series with frame sizes 400 and 450 with the IVC-C advanced insulation system:

- _ $\hat{U}_{\text{phase-to-phase}} \leq 1600 \text{ V}$ (3200 V peak-peak values ($V_{\text{pk/pk}}$))
- _ $\hat{U}_{\text{phase-to-ground}} \leq 1400 \text{ V}$ (2800 V peak-peak values ($V_{\text{pk/pk}}$))

Motors of the 1MB.8 series with frame sizes 71 to 450 with the IVC-C premium insulation system:

- _ $\hat{U}_{\text{phase-to-phase}} \leq 2200 \text{ V}$ (4400 V peak-peak values ($V_{\text{pk/pk}}$))
- _ $\hat{U}_{\text{phase-to-ground}} \leq 1500 \text{ V}$ (3000 V peak-peak values ($V_{\text{pk/pk}}$))
- _ $U_{\text{line}} \leq 690 \text{ V} \pm 10 \%$ without filter

Motors with the advanced insulation system can be operated on the converter without an additional dv/dt or sine-wave filter.

Recommended limits:

- _ $U_{\text{line}} \leq 480 \text{ V}$
- _ $U_{\text{dc}} \leq 720 \text{ V}$

Converter operation requires a dv/dt or sine-wave filter or a motor with PREMIUM insulation system (motor types 1MB18. or 1MB58.) if at least the following limit is exceeded:

- _ $\hat{U}_{\text{phase-to-phase}} \leq 1500 \text{ V}$ (3000 V peak-peak values ($V_{\text{pk/pk}}$))
- _ $\hat{U}_{\text{phase-to-phase}} \leq 1600 \text{ V}$ (3200 V peak-peak values ($V_{\text{pk/pk}}$)) converter voltage $\geq 500 \text{ V}$

The voltage limits are chosen such that safe operation is ensured without knowledge of the converter or the converter infeed. If it is ensured that the motor is powered through a converter with uncontrolled infeed (e.g. SINAMICS G), the 1MB15 and 1MB55 motors can be operated up to $U_{\text{line}} = 480 \text{ V}$ because the limits $U_{\text{dc}} \leq 720 \text{ V}$ are then observed.

In configuration of the drive system, it must be considered that the DC-link voltage UDC exceeds the limit of $U_{\text{dc, max}} = 720 \text{ V}$ (continuous duty) during braking where converters without energy recovery capability, such as SINAMICS G, are used. Exceeding this limit is permissible for a short time, for example, if the $U_{\text{dc, max}}$ controller or braking chopper ensures that the DC-link voltage does not exceed the following limits:

- _ 1MB.5 (advanced): $U_{\text{dc, max}} = 890 \text{ V}$ (short-time duty)
- _ 1MB.8 (premium): $U_{\text{dc, max}} = 1225 \text{ V}$ (short-time duty)

Further configuration notes are documented in the declaration of compliance with the order 2.1 and in the EU type-examination certificates.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Order processing of 1MB1, 1MB5 motors with Ex db, Ex ec, Ex tb and Ex tc for converter operation

PTC thermistor

For converter operation, Ex motors must always be monitored using PTC thermistors. The motors must therefore be ordered with the 15th position of the Article No.

_ **B** – PTC thermistor for tripping – or alternatively

_ **C** – PTC thermistor for alarm and tripping.

General information regarding the PTC thermistors:

_ **B** in 15th position of the Article No.:

The motors are equipped with 3 PTC thermistors for tripping in the motor winding.

_ **C** in 15th position of the Article No.:

The motors are equipped with 3 PTC thermistors for alarm and 3 PTC thermistors for tripping in the motor winding.

Certified tripping units are required for this purpose, see Catalog IC 10.

To ensure unambiguous order handling for the voltage, each approved voltage code/voltage order code is assigned only "one" voltage/frequency, as seen below:

Voltage code 12th and 13th position of the Article No.	Order code	Line frequency	Line voltage
22	-	50 Hz	230 VΔ/400 VY, 50-Hz power ²⁾
34	-	50 Hz	400 VΔ/690 VY, 50-Hz power ²⁾
33	-	50 Hz	380 VΔ/660 VY, 50-Hz power
27	-	50 Hz	500 VY, 50 Hz power
40	-	50 Hz	500 VΔ, 50 Hz power
90	M4A	50 Hz	400 VY, 50 Hz power
90	M4B	50 Hz	400 VΔ, 50 Hz power
90	M4E	50 Hz	690 VY, 50 Hz power
90	M4F	50 Hz	690 VΔ, 50 Hz power
90	M2C	60 Hz	440 VY, 50 Hz power
90	M1C	60 Hz	440 VY, 60 Hz power

90	M2L	60 Hz	480 VΔ, 50 Hz power
90	M1L	60 Hz	480 VΔ, 60 Hz power
90	M1Y (non-standard winding)	50 or 60 Hz	Plain text (observe max. voltage stress)
90	M3A ¹⁾	87 Hz	At 87 Hz, 400 VΔ: (4-pole to 8-pole)

¹⁾ The motor contains winding version 50 Hz 230 VΔ.

²⁾ Stamp data for converter operation are indicated for 400 V.

³⁾ Zone 21 includes conductive and non-conductive dust.

Minimum pulse frequency for operation without derating

Power (kW)	Minimum pulse frequency
$P_N < 90$	≥ 2 kHz (Ex db ≥ 2 kHz)
$90 \geq P_N \leq 250$	≥ 2 kHz
$250 \geq P_N \leq 460$	≥ 1.25 kHz
$P_N > 400$ (FS400/450)	≥ 2.5 kHz

Converter operation specially for motors in type of protection "Ex ec" (Zone 2) and VIK-Ex ec version

IEC/EN 60079-7 specifies that the motor and converter must be tested as a unit (individual test). The individual test is available for motors of "Ex ec" type of protection on the specified converters SINAMICS G, SINAMICS S and SINAMICS V20.

For details, see declaration of compliance with the order 2.1.

Operation with frequency converters not mentioned or converters from other manufacturers that are comparable in terms of output voltage, output current, switching frequency and modulation according to the information on the motor type plate or additional plate and in the declaration of conformity with the order 2.1 does not require individual testing.

Converters with different parameters must be tested individually to avoid exceeding the motor limit temperatures.

Converter operation specially for motors in type of protection "Ex tb" (Zone 21) and "Ex tc" (Zone 22)³⁾

The drive system comprising motors protected against dust explosions operating on SINAMICS G, SINAMICS S and SINAMICS V20 converters has been tested. For details, see declaration of compliance with the order 2.1. Please inquire about operation with non-Siemens converters.

Converter operation specially for motors with type of protection "Ex ec/Ex tc" (Zone 2/22)

For the 1MB..3 Ex ec motors, the order code **B30** version (IP55) for Zones 2 and 22 must also be specified in the case of non-conductive dust. Declaration of compliance with the order 2.1 analogous to that for Zones 2, 21 and 22.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

1MB1, 1MB5 in Ex ec, Ex tb and Ex tc:

Selection of the frequency converters

The SINAMICS frequency converters are categorized into 2 product groups (order code **B40** and **B41**). Each product group is a data record with motor operating data each assigned to one frequency converter. The converter type is stamped on the rating plate. Alternative, approved SINAMICS converters can be selected, by adding the order code **Y68**.

Product group 1 (basic version):

Order code **B40** - version for converter operation in basic version with operating data SINAMICS G120 with PM240-2

Product group 1 (alternative SINAMICS converter):

Order codes **B40** + **Y68**

Operating data such as the **B40** order code with alternative SINAMICS converter on the rating plate:

- _ **Y68** with plain text (C-text) G120 with PM230
- _ **Y68** with plain text (C-text) G120 with PM240
- _ **Y68** with plain text (C-text) G120C
- _ **Y68** with plain text (C-text) G120P with PM230
- _ **Y68** with plain text (C-text) G120P with PM240-2
- _ **Y68** with plain text (C-text) G120P with PM240P-2
- _ **Y68** with plain text (C-text) G120P with PM330
- _ **Y68** with plain text (C-text) G130
- _ **Y68** with plain text (C-text) G150
- _ **Y68** with plain text (C-text) G180
- _ **Y68** with plain text (C-text) S120 (BLM/SLM)
- _ **Y68** with plain text (C-text) V20

Product group 2 (basic version):

Order code **B41** - version for converter operation in basic version with operating data SINAMICS S150.

Product group 2 (alternative SINAMICS converter):

Order codes **B41** + **Y68**

Operating data such as the **B41** order code with alternative SINAMICS converter on the rating plate:

- _ Order code **Y68** with plain text (C-text) S120 (ALM)

Operation on frequency converters of unknown type or brand:

When operating on non-listed SINAMICS frequency converters or frequency converters from other manufacturers (order code **B43**), the performance data is reduced compared to data according to **B40** or **B41**.

1MB1.5 and 1MB5.5 with Ex db, Ex db eb and 1MB5.4 (≤ 200 kw) efficiency class IE4 in ex ec, tb, tc:

Selection of the frequency converter

The Innomotics 1MB..5 and 1MB..6 motors are suitable and certified for operation on the PWM frequency converter. The only distinction made is whether the maximum permitted temperature rise of the winding is 130(B) – order code **B43** or 155(F) – order code **B44**. The power with utilization of 155(F) is approx. 10 % higher than with utilization 130(B) and the order code **B43** is usually approximately equal to the line power.

Combination with SINAMICS converters as stated in the list under Ex ec has been pretested and is recommended. For other converter types and non-Siemens converters, operation according to the Ex specifications is possible if the requirements of the certificate are met.

Defining the power for converter operation

The optimum power data are marked on the motors. These data are universally valid and can be viewed in the Innomotics Configurator and used as the basis for configuration.

In specific applications, e.g. for very long motor cables, if a sine-wave filter is being used - or for converter types that cannot reach the full rated voltage at rated frequency as a result of the inherent design, then at rated voltage there is a voltage drop at the motor terminals. Under this operating condition, in order that the motor temperature rise is not inadmissibly high, at the maximum permissible current, it is possible that the motor power is reduced (derating). For example, for use of sine-wave filters and the consequential reduction of the motor voltage by 10 to 15 %, the permissible power ratings for converter operation must be similarly reduced by 10 to 15 % at rated frequency because the corner frequency for determining the power is reduced accordingly. Operation below the reduced corner frequency is possible without reducing the torque.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Rating plate

The operating data for line operation is specified on the rating plate - on an additional rating plate, according to the selected product, 4 rated operating points are possible in the following variants:

Possible variants	Rated operating points in Hz				Additional identification code voltage code 12th and 13th position of the Article No. and order code
50 Hz field weakening range	5	25	50	f_{max}	50 Hz voltage: e.g. "90" and M4A
60 Hz field weakening range	6	30	60	f_{max}	60 Hz voltage: e.g. "90" and M1E
87 Hz characteristic	5	25	87	f_{max}	87 Hz at 400 VΔ: "90" and M3A

f_{max} see page 5/20 "Mechanical limit speeds of the Innomatics XP explosion-protected motors".

Other voltages can be selected with the voltage code **90** (12th, 13th position of the Article No.) and order code **M1Y** Special winding.

Special case: Line operation data in two voltage levels plus converter data in one voltage level: **M1Y + Y80** e.g. 400 VΔ/690 VY 50Hz DOL + 400 VΔ VSD

Insulated bearings

Frame sizes 225 and 250:

For converter operation it is recommended that an "insulated bearing cartridge NDE" – order code **L51** be used.

Frame sizes 280 to 355:

For ordering with order codes **B40/B41/B43/B44**, the "insulated bearing cartridge NDE" is included as standard.

Frame sizes 400 and 450:

For ordering with order codes **B40/B41/B43**, the "insulated bearing cartridge NDE" is included as standard.

The data on the separate rating plate for converter operation apply to both constant torque drives and pump/fan/compressor drives. For a constant torque drive, the resulting thermal motor torques in the positioning range must be taken into account.

Example motor ID:

Motor rating plate with line operation data and additional rating plate with converter operation data:

G_D081_XX_01152

For all motors, an additional rating plate complete with the operating data for the motor on the converter is fitted.

The converter type and the associated operating data are on the rating plate.

The reasons for stamping the converter type on the additional rating plate are the different control levels for the converter output voltage, pulse frequency, output frequency, harmonic content and the associated derating for the motor.

For compliance with the permissible temperature class 130 (B), derating is necessary for converter operation below the power for direct line operation! The reduction in torque depends on the choice of converter type. The data can be viewed in the Innomatics Configurator and used as the basis for configuration.

The declaration of compliance with the order 2.1 for the specified converters is stored with the documentation for low-voltage motors in the Innomatics Configurator.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Configuration notes for converter operation

Permissible voltage stress

More stress is placed on the insulation of the motor winding with converter operation than with line operation. The voltage stress also depends on the type of converter used.

Voltage stress on a converter with pulse width modulation (PWM)

The PWM converter subjects the motor windings to wear and tear mainly by quickly applying voltage pulses. Each switching process of the converter releases a voltage wave onto the motor supply cable that can result in excessive motor voltages due to reflection (see diagram).

Typical progression of converter voltage U_{FC} and motor voltage U_{Motor} on the PWM converter (converter with and without output filter)

The maximum voltage is influenced by the rise time of the pulses and by the length of cable used between motor and converter. A dv/dt output filter at the converter can reduce the maximum motor voltage to uncritical values. If the permitted limits of the peak voltage for standard insulation $1500 V_{peak}$ ($3000 V_{peak/peak}$) or for premium insulation $2200 V_{peak}$ ($4400 V_{peak/peak}$) is exceeded in operation, premature motor failures can occur.

For Innomotics XP motors, the limits according to the certificate apply additionally and take precedence.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Individual drive check of variable speed drive (VSD) systems (IC411 self-ventilated motors) with configuration characteristics for converter operation – 1MB1/1MB5 motors (all types of protection).

Limits for example control ranges are listed in the power tables on the following pages. For individual drive checks, the following configuration characteristics apply to frame sizes 71 to 355.

For driven machine power or torque less than or equal to rated data, operation up to f_{\max} in accordance with the power tables is possible. This applies to configurations with any load torques and control ranges.

The maximum admissible speed in field weakening can be calculated by dividing $f_{\max} \times 120$ by the motor's number of poles.

Checking the feasibility of the required operating point

To do this, (derived from reference point A)

- _ The desired load/power P_2 must be divided by the VSD power P_{VSD}
- _ The desired control speed n must be divided by the VSD asynchronous speed $n_{\text{asyn VSD}}$
- _ The desired load/torque T_D must be divided by the VSD torque T_{VSD} .

These calculated values should be checked afterwards against the following diagrams to determine whether the desired operating point is below the VSD load/torque limit T_D/T_{VSD} and the load/power limit P_2/P_{VSD} .

Configuration characteristics for frame sizes 71 to 200

- AM/P: Reference point for general selecting/dimensioning
- AP: Typical load point for applications with square-law load torque, e.g. fans and pumps
- BM/CM: Typical load point for applications with constant load torque, e.g. hoisting gear, conveyor belts etc.
- DM/DP: Typical load point for applications with increased speed/frequency

Innomotics XP 1MB1.6 (frame sizes 100 to 280) and 1MB5.6 (frame sizes 315 to 355) in type of protection Ex db eb IIB are optionally available with special bearing arrangement for high axial loads.

Bearings for axial tension forces - order code L34
(frame sizes 100 ... 355):

On the drive end, there is a mounted angular-contact ball bearing for increased tension forces from the motor in the direction of the driven equipment. The bearing in frame sizes 100 to 132 is lubricated for life. For frame sizes 160 to 355, the bearings are equipped with a regreasing device.

Bearings for axial tension and thrust forces - order code L35
(frame sizes 160 ... 225):

On the non-drive end, there are two mounted angular-contact ball bearings for increased tension and thrust forces in O arrangement. The bearings are located on the non-drive end and are designed with a regreasing device.

Frame size	Δl in mm
63 M/L	25
80 M/L	24
200 L	30
225 S/M	24

Note:

When ordering, the maximum radial and axial forces must also be specified for subsequent checks.

Grounding on the housing of 1MB..5 and 1MB..6 motors

Frame size	Thread size for the grounding conductor
71 ... 112	1 x M5
132 ... 160	2 x M6
180 ... 280	2 x M8
315 ... 355	2 x M12

Grounding on the housing of 1MB..1, 1MB..2 and 1MB..3 motors

Frame size	Thread size for the grounding conductor
63 ... 160	1 x M5
180	1 x M6
200	2 x M6
225 ... 280	1 x M8
315 ... 355	2 x M12

¹⁾ For continuous operation in the range f_{max} (n_{max}), an inquiry is required.

²⁾ For frame size 315, converter operation is not permissible with 2 poles.

³⁾ For converter operation, the maximum tested and certified frequency may differ.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Special technology

"Special technology" comprises technology that is compatible with explosion-protected motors.

Explosion-protected motors can be implemented in a broader range of applications when explosion-protected rotary pulse encoders or explosion-protected separately driven fans are mounted.

The use of a separately driven fan is recommended to increase motor utilization at low speeds and to limit noise generation at speeds significantly higher than the synchronous speed.

Both are normally only appropriate with converter-fed operation.

For explosion-protected motor versions with explosion-protected rotary pulse encoders or explosion-protected separately driven fans, see the tables below.

The following explosion-protected motor versions are available with explosion-protected rotary pulse encoders:

Type of protection	Motor type + order code	Frame size	Order code for explosion-protected rotary pulse encoder

Notes:

- _ The motor operating data with the explosion-protected separately driven fan is available in the Innomotics Configurator.
- _ Alternatively, explosion-protected separately driven fans can also be used in line operation for special applications.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Explosion-protected rotary pulse encoder

The rotary pulse encoder can only be mounted on a standard non-drive end (NDE), i.e. a second shaft extension cannot be supplied.

By virtue of its design, the explosion-protected rotary pulse encoder does not have insulated bearings (please inquire).

The degree of protection of the rotary pulse encoder must be observed. The relevant data are stamped on the rating plate of the rotary pulse encoder.

Attaching an explosion-protected rotary pulse encoder increases the length of the motor by Δl .

For an explanation of the additional dimensions and weights, see "Dimensions and weights of explosion-protected rotary pulse encoders".

LL 841 910 013 rotary pulse encoder (HTL version)

This encoder has a rugged construction and is therefore also suitable for difficult operating conditions. It is resistant to shock and vibration and is suitable up to corrosivity category C4.

The LL 841 910 013 explosion-protected rotary pulse encoder is supplied with the already mounted ADS diagnostic system for early detection of errors in the encoder.

Order code **G30**

Technical specifications for LL 841 910 013 (HTL version)

Supply voltage U_B	+9 ... +30 V
Current input without load	max. 80 mA
Admissible load current per output	40 mA
Pulses per revolution	1024
Outputs	6 short-circuit proof square-wave pulses A, A', B, B', 0, 0', high current HTL Floating switching output for ADS signal
Pulse offset between the two outputs	$90^\circ \pm 5^\circ$ el.
Output amplitude	$U_{\text{high}} > U_B - 4 \text{ V}$ $U_{\text{low}} < 2.5 \text{ V}$
Mark space ratio	$1:1 \pm 10 \%$
Maximum frequency	100 kHz with 350 m cable length
Maximum speed	4200 rpm (the maximum permissible speed must be observed during the configuration)
Temperature range	$-40 \dots +60^\circ \text{C}$
Degree of protection	IP65
Maximum adm. radial cantilever force	150 N
Maximum adm. axial force	100 N
Connection system	Terminal strips in encoder/cable connection M20 x 1.5 radial (screw terminals)
Weight, approx.	1.7 kg

Dimensions and weights of the explosion-protected rotary pulse encoders

Explosion-protected rotary pulse encoder (on cover), order code **G30**

1MB10, 1MB15, 1MB16, 1MB55, 1MB56, 1MB58 motors		
Frame size	Δl	Weight approx.
	mm	kg
100	110	2
112	110	2
132	110	2
160	110	2
180	110	2
200	110	2
225	100	3
250	100	3
280	100	3
315	100	3
355	100	3
400	100	3
450	100	3

A protective cover of non-corrosive sheet steel is available for the explosion-protected rotary pulse encoders from the "special technology".

For motors in the shaft heights

- _ 100 to 200: a protective cover is always provided
- _ 225 to 450: Order code **G43** - "Mechanical protection for encoder" (protective cover analogous to order code **H00**)

The length of the motor is also increased in the case of the following shaft heights:

- _ 100 to 200 by up to 146 mm
- _ 225 to 315 by up to 25 mm

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Explosion-protected separately driven fan

The use of a separately driven fan is recommended to increase motor utilization at low speeds or to limit noise generation at speeds significantly higher than the synchronous speed. Both of these results can only be achieved with converter operation. Please inquire about traction and vibratory operation.

In the case of explosion-protected motors, the explosion-protected separately driven fan is available already mounted. Order code **F70**

Notes:

- _ The order code **F70** applies to all types of protection because the type of protection is already defined by the article number of the motor. Order code **F70** determines the additional charge for the separately driven fan in the assigned type of protection.
- _ The motor operating data with the explosion-protected separately driven fan is available in the Innomotics Configurator.
- _ The separately driven fan motor for frame sizes 225 to 355 is made of aluminum for protection types Ex ec, Ex tc, Ex tb and made of cast iron for type Ex db.

The supply voltage for the explosion-protected motors with separately driven fan is specified as follows:

Type 2CW2 has a wide-range voltage winding (see page 5/24 "Technical specifications of separately driven fans for 1MB1 explosion-protected motors (frame sizes 100 to 200) in the Ex tc (Zone 22) and Ex ec (Zone 2) versions"). These explosion-protected motors with separately driven fan up to frame size 200 have a rated voltage (rated voltage range) with tolerances according to IEC/EN 60034-1, range A.

Technical specifications of separately driven fans for 1MB..5 and 1MB..6 explosion-protected motors (frame sizes 225 to 355) in the Ex db eb (Zone 1) versions

Frame size	Voltage V	Frequency Hz	P_{max} kW	I_{max} A
225	400	50	0.55	1.34
250				
280	460	60		1.23
315				
355	400	50	1.1	2.25
	460	60		1.98

A rating plate with the operating data is fitted to each explosion-protected motor with separately driven fan.

The type of protection of the explosion-protected motor corresponds to that of the associated explosion-protected basic motor. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it.

Please inquire regarding coolant temperatures outside the range -20 to +40 °C.

The Ex ec/Ex tc motor with separately driven fan has the degree of protection IP55 as standard; Ex tb: IP65 (higher degrees of protection with Ex ec are available on request).

Motors with a separately driven fan must be equipped with a PTC thermistor as motor protection (15th position of the Article No.): In the event of a fault in the separately driven fan, the PTC thermistor must reliably trip the 1MB1 or 1MB5 explosion-protected motors.

For assignments and article numbers, see the tables "Technical specifications of separately driven fans for explosion-protected motors 1MB1..." on the following pages. A rating plate listing all the important data is fitted to the separately driven fan. Please inquire in the case of supply voltages outside of the rated voltage range. Please note the direction of rotation of the separately driven fan (axial-flow fan) when connecting it. The permissible coolant temperatures are $C_{T_{min}}$ -20 °C and $C_{T_{max}}$ +40 °C. Lower coolant temperatures are available on request.

When the separately driven fan is mounted, the length of the motor increases by Δl . For an explanation of the additional dimensions and weights, see "Dimensions and weights of explosion-protected separately driven fans".

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Version 1MB..5, 1MB..6 motors (Ex db, Ex db eb) with mounted brake

The brake is located at drive-end of the motor and can be mounted with flange B5 or B14 depending on the motor – 14th position of the Article No. **F** (flange B5); **K** (flange B14).

The shaft extension is implemented in the same way as the standard shaft extension of the motor. A special shaft extension or special bearings are not possible.

The motor, including the brake, is available ATEX-certified as standard and optionally with IECEx (order code **D37**) and EACEx (order code **D35**).

The spring-operated brake (order code **F20**) is a single-disk brake with two friction surfaces. The compression springs produce the braking torque by means of friction that opposes the disk. The brake is released electromagnetically.

The degree of protection of the brake is IP66 (IEC/EN 60034-5 and IEC/EN 60079-0).

The braking voltage supply 24 V DC (order code **F10**), 230 V AC (order code **F11**) and 400 V AC (order code **F12**) have to be ordered together with order code **F20**.

In the standard version, the brake is equipped with a bimetal protection device for thermal protection with a limit value for the temperature class of the brake.

Dynamic application of the brake in accordance with the permissible energy and frequency of braking (duty cycles) can be determined by the formula "Calculation of the slipping time of the friction disk" and table "Frequency of braking".

For special operating characteristics in accordance with the permissible energy and the frequency of braking (braking cycles), calculation of new values by Innomotics is necessary.

The possibility of manual release of the brake can be ordered optionally (order code **F50**). In this case, the brake can be released in the de-energized state (no lock).

Further options for controlling the brake, such as a PTC thermistor for monitoring the brake temperature, are available on request

Dynamic application of the brake

Due to dynamic application of the brake, the permissible energy is limited by the maximum frequency of brake application and the maximum slipping time of the friction disk for one brake application.

¹⁾ Due to the limited maximum braking velocity, 2-pole motors are not suitable for S1 duty.
²⁾ Due to the limited maximum braking velocity, 2-pole motors are not possible.
³⁾ The brake is mounted at the drive-end. The motor with brake can be mounted with a B5 or B14 flange, depending on the motor.
 Flange B5 (14th position of the Article No. **F**) mounting of types of construction IM B5, IM V1, IM B35, IM V15;
 Flange B14 (14th position of the Article No. **K**) mounting of types of construction IM B14, IM V18, IM B34).
 It is not possible to mount IM V3 and IM V35.
⁴⁾ The bearing lifetime of the brake is the same as the bearing lifetime of the motor.

⁵⁾ The dynamic braking torque is lower because the rated braking torque depends on the speed. (The technical specifications must be stated for the dynamic braking torque.)
⁶⁾ For a voltage of 230 V AC, a bridge rectifier is used, which is contained in the scope of supply.
⁷⁾ For a voltage of 400 V AC, a half-wave rectifier is used, which is contained in the scope of supply.
⁸⁾ Time until the braking torque is reached after the voltage supply is switched off.
⁹⁾ Time until the braking torque has decayed after the voltage supply is switched on.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Technical specifications

Calculation of the slipping time t_3 of the friction disk¹⁾

$$t_3 = \frac{J_{\text{total}} \cdot n}{9.55 \cdot (T_f \pm T_{\text{load}})}$$

J_{total}	Total moment of inertia on the motor shaft $J_{\text{brake}} + J_{\text{motor}} + J_{\text{load}}$ in kgm^2
n	Motor speed in rpm
M_f	Rated braking torque in Nm
M_{load}	Instantaneous load torque in Nm positive or negative, depending on the conformity with the braking torque
t_3	Slipping time in s

Frequency and slipping time t_3 (duty cycles)

Brake type	Frequency of operations per cycle (1/h) ²⁾	
	Slipping time t_3 ≤ 0.5 s	Slipping time t_3 ≥ 0.5 s to ≤ 0.8 s

VIK version

VIK = Verband der Industriellen Energie- und Kraftwirtschaft e.V.
(German Association of the Energy and Power Supply Industry)

– VIK standard version –

1LE1, 1LE5 + order code **C02**

"VIK" identification on rating plate.

? Product range in Catalog Section 2.

– VIK-Ex ec version for line operation –

1MB1.3, 1MB5 + order code **C02**

"VIK" and "Ex ec IIC T3 Gc" marking on the rating plate according to Directive 2014/34/EU (ATEX).

? Product range in this Catalog Section.

– VIK Ex ec version for converter operation –

1MB1.3, 1MB5 + order code **C02+B40/B41+...**

"VIK" and "Ex ec IIC T3 Gc" markings on the rating plate and motor operating data for converter operation on the additional rating plate according to Directive 2014/34/EU (ATEX).

VIK standard version and VIK Ex ec versions include technology for Zone 2 with type of protection Ex ec IIC T3 Gc. Motors up to frame size 355 can be supplied in accordance with the technical requirements of the VIK recoDesign features for VIK version:

Ausführungsmerkmale VIK:

- _ Rating plate made of stainless steel
- _ Fan cover made of sheet steel
- _ Vertical motors with protective cover (order code H00 must be ordered)
- _ Terminal box with silicone seal
- _ Certified connection system in the terminal box
- _ Terminal box with certified sealing plugs
- _ External grounding
- _ Painting according to corrosivity category C3
- _ Second rating plate supplied loose

¹⁾ The slipping time t_3 is the friction time until the motor stops (≤ 0.8 s); slipping time > 0.8 s on request.

Minimum efficiency class:

For VIK standard, VIK Ex ec and VIK-Ex db version, the minimum efficiency class IE3 for line operation and converter operation must be complied with according to EU Regulation 2019/1781.

For the VIK Ex eb version, the minimum efficiency class is IE2.

Ex certification EAC for the Eurasian Customs Union (Russia, Belarus, and Kazakhstan, Armenia, Kyrgyzstan)

EAC = Eurasian Conformity

For the import and commissioning of explosion-protected motors in the Eurasian Customs Union, approval is required from a named Russian testing authority.

"Ex certificate EAC for the Eurasian Customs Union"

Order code **D35**

When motors are ordered with order code **D35**, they are fitted with an additional rating plate displaying the logo "EAC Ex" and the Russian Ex marking.

Example: Additional rating plate

The "EAC Ex" logo can also be found on the package label. The motor must have an "EAC Ex certificate", although the certificate does not generally have to be shipped with the motor. The customs authorities use the motor article number to check the motor certification.

A copy of the EAC Ex certificate must be in the customer's possession before the motor is commissioned.

The certificates are available from the Innomotics Download Center
innomotics.com/hub/en/search/entrypages/productinformation
as well as the Innomotics Configurator
configurator.innomotics.com

Coolant temperature

Coolant temperature -40 to $+40$ °C for explosion-protected motor

For all Innomotics XP 1MB. motors of frame sizes 71 to 450, the operating temperature can optionally be extended up to -40 °C. Extensive technical measures are necessary in this case.

Order code **D03**

For motors with type of protection Ex db IIB, the operating temperature can optionally be extended up to -55 °C.

Order code **D05**

²⁾ Maximum frequency of braking (duty cycles) per hour (> 0.8 s on request).

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Article number code

Selection and ordering data

The article number consists of a combination of digits and letters and is divided into three hyphenated blocks to provide a better overview, e.g.:

1MB1511-1DB22-2AB4-Z
R10

The first block (positions 1 to 7) identifies the motor type. The second block (positions 8 to 12) defines the motor frame size and length, the number of poles and power and in some cases the frequency/voltage. In the third block (positions 13 to 16), the frequency/voltage, type of construction and further design features are encoded.

For deviations in the second and third block from the catalog codes either **Z** or **90** should be used as appropriate.

Ordering data:

- _ Complete Article No. and order code(s) or plain text
- _ If a quotation has been requested, please specify the quotation number in addition to the Article No.
- _ When ordering a complete motor as a spare part, please specify the works serial No. for the previously supplied motor as well as the Article No.

Structure of the Article No.:		Position: 1	2	3	4	5	6	7	-	8	9	10	11	12	-	13	14	15	16

1) Terminal box 1XB1631.
 2) Terminal box position NDE can only be ordered using order code H09 (2 x terminal box TB3R61). Order code H08 not available.
 3) The standard version is 50 Hz 690 VΔ (voltage code 4-7) or 60 Hz 575 VΔ (voltage code 4-0).

4) In the series version, the maximum speed is n_{max} = 3000 rpm. Converter operation at higher speeds on request for an additional charge.
 5) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).

5

1) Terminal box 1XB1631.
 2) Terminal box position NDE can only be ordered using order code **H09** (2 × terminal box TB3R61). Order code **H08** not available.
 3) The standard version is 50 Hz 690 VΔ (voltage code **4-7**) or 60 Hz 575 VΔ (voltage code **4-0**).

4) In the series version, the maximum speed is $n_{max} = 3000$ rpm. Converter operation at higher speeds on request for an additional charge.
 5) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).

1) Terminal box 1XB1631.

2) The standard version is 50 Hz 690 VΔ (voltage code 4-7) or 60 Hz 575 VΔ (voltage code 4-0).

3) In the series version, the maximum speed is $n_{max} = 3000$ rpm. Converter operation at higher speeds on request for an additional charge.

4) Utilization with sinusoidal supply in accordance with thermal class 155 (temperature class F).

¹⁾ Operating values at rated power for 60 Hz are stored in the Innomatics Configurator.
²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible, provided that no requirements exist for condensation drainage holes (H03) or stamping of the type on the rating plate. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate. For orders with condensation drainage holes (H03), the type must be specified.

³⁾ Parallel supply lines are required in the case of connection to ≤ 240 V. For frame size 315 with connection to ≤ 240 V, due to the high current, a drilled, removable entry plate (order code R52) or a larger terminal box (order code R50) can be used. Order codes R52 and R50 alter the motor dimensions.
⁴⁾ No IE class for 50 and 60 Hz because the motor is outside the validity for the efficiency classes according to IEC 60034-30-1:2014.
⁵⁾ Not possible for 8-pole motors.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Cast-iron series 1MB1543, 1MB1643, 1MB5543, 1MB5643 – self-ventilated

1) Noise values for line operation under load, tolerance + 3dB(A).
 2) These sound power levels are above the set values in the VIK recommendation in the "standard" version. This difference must be agreed between the manufacturer and the operator.
 3) The tE time T3 of
 - 1MB1543-1EB4 at 7s falls below the set value of 7.2s from the
 - 1MB1543-2AB5 at 6s falls below the set value of 7.1s from the VIK recommendation. These differences must be agreed between the manufacturer and the operator.

4) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate.

1) Noise values for line operation under load, tolerance + 3dB(A).
 2) The t_E time T3 of
 - 1MB1543-1EB4 at 7s falls below the set value of 7.2s from the
 - 1MB1543-2AB5 at 6s falls below the set value of 7.1s from the
 VIK recommendation. These differences must be agreed between the
 manufacturer and the operator.
 3) These sound power levels are above the set values in the VIK recommendation
 in the "standard" version. This difference must be agreed between the
 manufacturer and the operator.
 4) Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1)
 and from IM B14 (IM V19 and IM V18) are possible. The basic type IM B3, IM B5 or
 IM B14 is stamped as standard on the rating plate.

¹⁾ Noise values for line operation under load, tolerance +3dB(A).²⁾ Types derived from IM B3 (IM B6/7/8, IM V6 and IM V5), from IM B5 (IM V3 and IM V1) and from IM B14 (IM V19 and IM V18) are possible. The basic type IM B3, IM B5 or IM B14 is stamped as standard on the rating plate.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Cast-iron series 1MB.853/1MB.863 - self-ventilated

Selection and ordering data

Table with columns for P_rated, Frame size, Operating values at rated power (eta_rated, T_rated, etc.), Cast-iron series (1MB18, 1MB58), m_M B3, J, kW, FS, rpm, Nm, %, COS phi, I_rated, T_LR, I_LR, T_B, L_pfa, L_WA, Article-No., kg, kgm^2. Includes sections for cooling, efficiency, insulation, and optional converter operation.

5

For footnotes see page 5/73

- Not possible
- This order code only determines the price of the version - Additional plain text is required.

1) Delta connection is not possible.
 2) Star connection is not possible.
 3) A power of 3.7 kW is stamped on the rating plate for versions 1MB1... - 1BA2, 1MB1... - 1BB2, 1MB1... - 1CC2 and 1MB1... - 1DD2 at 60 Hz with 50 Hz power in accordance with the international efficiency classification to IEC 60034-30.
 4) Plain text must be specified in the order:
 Voltage between 200 and 690 V (voltages outside this range are available on request), frequency, circuit, for 60 Hz additionally required rated power in kW.

5) Only possible for 4-pole, 6-pole and 8-pole motors and in combination with the order codes **B40** and **B41**. The operating data for converter operation is also provided in a table on the additional rating plate. The motor contains winding version 50 Hz 230 VΔ.
 6) Order code M1A, M1B, M1C, M1D, M1E, M1F, M1G, M1H, M1K, M1L, and M1M in combination with order code B40, B41, B43 and B44 only on request.

- ✓ With additional charge

- Not possible
- This order code only determines the price of the version – Additional plain text is required.

¹⁾ Special certification is required for 60 Hz.
²⁾ Plain text must be specified in the order:
 Voltage between 200 V and 690 V (voltages outside this range are available on request), frequency, circuit, for 60 Hz additionally required rated power in kW.

³⁾ Motors in these frame sizes have a second rating plate (T1/T2 and T3) as standard. The T3 power is stamped on the rating plate as standard if the following motors are selected with PTC thermistor (protection by PTC thermistor only) or voltage code "90":
 - 2-pole motors: Frame sizes 132 to 160
 - 4-pole motors: Frame size 180
 Alternatively, with order code **B33**, the "T1/T2 power is stamped on the rating plate".
 - 2-pole motors: Frame sizes 132 to 200
 - 4-pole motors: Frame sizes 180 to 200

- Not possible

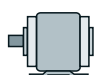

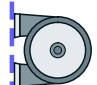

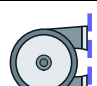

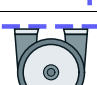

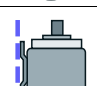

¹⁾ The following applies for explosion-protected motors: In the case of the types of construction with shaft extension down, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

²⁾ The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.

Standard version
 ? With additional charge

- Not possible

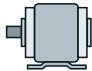

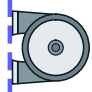

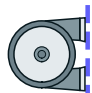

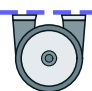

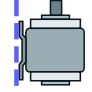

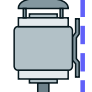

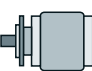

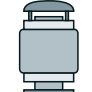

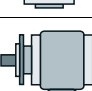

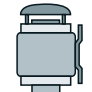

1) The following applies for explosion-protected motors: In the case of the types of construction with shaft extension down, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

2) The type of construction is stamped on the rating plate. For orders with condensation drainage holes (order code **H03**), if mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
 3) The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.
 4) With reference to standard IEC 60072-1, flanges that are 2 steps larger are used with option P01 in the frame sizes 71 and 80.

- 1) The types of construction IM B6/7/8, IM V6 and IM V5 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B3 is then stamped on the rating plate. With type of construction IM V5 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 2) The type of construction is stamped on the rating plate. If mounted in a different position, the position must be specified to ensure that the condensation drainage holes are positioned correctly.
- 3) The following applies for explosion-protected motors: In the case of the types of construction with shaft extension down, the version "with protective cover" is required. For types of construction with shaft extension pointing upwards, a suitable cover must be implemented to prevent small parts from falling into the fan cover (see the standard IEC/EN 60079-0). The cover must not block the cooling air flow.

- 4) In combination with an encoder, it is not necessary to order the protective cover (order code **H00**), as this is delivered as a protection for the encoder as standard. In this case the protective cover is standard design (without additional charge).
- 5) The "Standard cylindrical shaft extension (second shaft extension)" option (order code **L05**) is not possible.
- 6) Not available for 2-pole motors.
- 7) The types of construction IM V3 and IM V1 with/without protective cover are also possible as long as no stamping of these types of construction on the rating plate is required. As standard the type of construction IM B5 is then stamped on the rating plate. With type of construction IM V1 with protective cover, the protective cover has to be additionally ordered with order code **H00**. The protective cover is not stamped on the rating plate.
- 8) For machines, type of construction IM B5, provide an additional support foot at the NDE. The support foot is not included in the scope of supply. Use an appropriately sized support foot with the appropriate rigidity. The support foot must be able to support the total weight of the machine.

 Standard version With additional charge

¹⁾ For the Performance Line, motor protection by means of PTC thermistors with 3 built-in temperature sensors for tripping (motor protection code letter B) is already included in the basic price. For the Performance Line, the option "without motor protection" (motor protection code letter A) is not possible.

²⁾ Evaluation with associated tripping unit (see Catalog IC 10) is recommended.

³⁾ Motors in these frame sizes have a second rating plate (T1/T2 and T3) as standard. The T3 power is stamped on the rating plate as standard if the following motors are selected with PTC thermistor (protection by PTC thermistor only) or voltage code "90":

- 2-pole motors: Frame sizes 132 to 160
- 4-pole motors: Frame size 180

Alternatively, with order code **B33**, the "T1/T2 power is stamped on the rating plate".

- 2-pole motors: Frame sizes 132 to 200
- 4-pole motors: Frame sizes 180 to 200

⁴⁾ Maximum number of terminals for accessories, see the terminal box concept.

⁵⁾ Auxiliary terminal box required; option in Ex eb with order code **R62** or **R63**.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Overview

Couplings for use in hazardous areas

The motor from Innomotics is connected to the machine or gear unit through a coupling. Flender is an important coupling manufacturer with a wide range of products.

For standard applications, Innomotics recommends that flexible couplings, types N-EUPEX and RUPEX or torsionally rigid couplings, types ARPEX and ZAPEX are used. For special applications, FLUDEX and ELPEX-S couplings are recommended. These coupling types are suitable for use in areas subject to explosion hazards and are offered with declaration of conformity and EU type-examination certificate according to Directive 2014/34/EU.

Available from:

Flender contact partner - ordering from catalog

Taper pins according to DIN 258 with threaded ends and constant taper lengths

Taper pins are used for components that are repeatedly removed. The drilled hole is conically ground using a conical reamer until the pin can be pushed in by hand until the cone shoulder lies approx. 3 to 4 mm above the rim of the hole.

It can then be driven in using a hammer until it is correctly seated. The pin is removed from the drilled hole by screwing on the nut and tightening it.

Standardized taper pins are commercially available.

For instance, available from:

Otto Roth GmbH & Co. KG
Rutesheimer Strasse 22
70499 Stuttgart, Germany
Phone +49 711 1388-0
Fax +49 711 1388-233

Email: info@ottoroth.de

Foundation blocks according to DIN 799

The foundation blocks are inserted into the stone foundation and embedded in concrete. They are used for fixing machines of medium size, slide rails, pedestal bearings, base frames, etc. After the fixing bolts have been unscrewed, the machines can be shifted without them having to be lifted.

When the machine is initially installed, the foundation blocks that are bolted to the machine (without washers) and fitted with taper pins are not embedded with concrete until the machine has been fully aligned. In this case, the machine is positioned 2 to 3 mm lower. The difference in shaft height is compensated by inserting shims on final installation. The taper pins safeguard the exact position of the machine when it is repeatedly removed and replaced without the need for realignment.

Available from:

Lütgert & Co. GmbH
Postfach 42 51
33276 Gütersloh, Germany

Slide rails with fixing bolts and tensioning screws according to DIN 42923

Slide rails are used to tension the belt of a machine easily and conveniently when there is no belt-tensioning pulley. They are fixed to the base using stone bolts or foundation blocks.

The assignment of slide rails to motor size can be found in DIN 42923. For motors of frame sizes 355 to 450, there are no standardized slide rails (please inquire).

Innomotics XP 1MB1, 1MB5 explosion-protected motors

More information

Replacement motors and repair parts

- _ Commitment to provide replacement motors and repair parts following delivery of the motor:
 - _ For up to 3 years after the delivery of the original motor, in the event of total motor failure – with regard to the mounting dimensions and functions – Innomotics will supply a comparable replacement motor (the type series may vary).
 - _ If a spare motor is supplied within the 3-year period, this does not mean that the warranty restarts.
 - _ Replacement motors delivered after the active production of the motor series are also identified as spare motors on the rating plate.
 - _ Spare parts are available only on request for these spare motors. Repair or replacement is not possible.
 - _ After a period of 3 years (after the delivery of the original motor), it is only possible to repair these motors (depending on the availability of the spare parts required).
 - _ For up to 5 years after the delivery of the original motor, spare parts will be available and for a further 5 years, Innomotics will provide information about spare parts and will supply documents when required.
- _ When repair parts are ordered, the following details must be provided:
 - _ Designation and part number
 - _ Article No. and factory number of the motor.
- _ For bearing types, see Catalog Section 1 "Introduction".
- _ Repair parts are available for 1MB1 motors on request.
- _ For standard components, a commitment to supply repaired parts does not apply.

Innomotics XP 1MB1, 1MB5 explosion-protected motors

Notes on the dimensions

Overview

_ Dimension designations according to IEC 60072-1 and IEC 60072.

_ Fits

The shaft extensions specified in the dimension tables (DIN 748) and centering spigot diameters (IEC 60072-1) are machined with the following fits:

Dimension designation	ISO fit DIN ISO 286-2	
D, DA	to 30	j6
	over 30 to 50	k6
	over 50	m6
N	to 250	j6
	over 250	h6
F, FA		h9
S	flange (FF)	H17

The drilled holes of couplings and belt pulleys should have an ISO fit of at least H7.

Dimension K: nominal dimension according IEC 60072-1, negative deviation of tolerance H17 possible.

_ Dimensional tolerances

For the following dimension designations, the admissible deviations are given below:

Dimension designation	Dimension	Admissible deviation
H	to 250	- 0.5
	over 250	- 1.0
E, EA		- 0.5

Feather keyways and feather keys (dimensions GA, GC, F and FA) are made in compliance with DIN 6885 Part 1.

_ All dimensions are specified in mm.

_ The overall width of the motor is identical to the "AC" dimension.

Dimension sheet generator (within the Innomotics Configurators)

Overview

A dimensional drawing can be created in the Innomotics Configurator for every configurable motor.

A dimensional drawing can be requested for every other motor.

When a complete Article No. is entered with or without order codes, a dimensional drawing can be called up under the "Documentation" tab.

These dimensional drawings can be presented in different views and sections and printed. The corresponding dimension sheets can be exported, saved and processed further in DXF format (interchange/import format for CAD systems) or as bitmap graphics.

Online access!

The Innomotics Configurator can be used on the Internet without installation.

Innomotics DP application-specific motors

Overview

With the designation Innomotics DP, Innomotics offers a number of industry and application specific (**Definite Purpose**) motors that differ from standard motors in that they have special industry/ application-specific features:

Innomotics DP marine motors

Marine motors are exposed to air humidity and other hostile conditions on the high seas and must always perform their function reliably. Our marine motors meet the standards of the leading classification companies (DNV, BV, LR, KR, ABS, RINA) and have type test certifications up to frame size 315 L. They are basically suitable for the higher ambient temperatures in engine rooms below deck. If requested, a representative of the marine classification society can be present in our factories to formally accept equipment.

You will find more information on marine motors on the following pages.

Innomotics DP steel plant motors

The steel plant motors are specially designed for applications in the steel industry with stringent requirements for vibrations and shocks according to class 3M4 (EN 60721-3-3). They provide an optimized technical and economic solution for numerous transportation tasks in the steel manufacturing process or in steel manufacturing facilities, in which no scale dust occurs. Steel plant motors can be operated at a constant speed directly on the line or are used together with the SINAMICS S120 converter for dynamic processes.

The ordering data for Innomotics DP steel plant motors can be found in the Catalog ME 81 – Motors for the steel industry.

Innomotics DP roller table and steel plant motors

Innomotics DP roller table and steel plant motors are designed for directly driving the rollers of working roller tables in reversing rolling mills. They are designed as completely enclosed three-phase induction motors, with a housing made of spheroidal graphite cast iron, ring ribs, and reinforced bearing shields.

This makes the motors ideal for use with typical shocks and vibrations and severe dirt due to scale dust. On account of their special mechanical design, they meet the most stringent requirements demanded by this application. Of course, the motors are also designed for variable-speed reversing operation on frequency converters of the SINAMICS S and G series.

The ordering data for Innomotics DP roller table and steel plant motors can be found in the Catalog ME81 – Motors for the steel industry.

Innomotics DP crane motors

Like marine motors, crane motors are exposed to extreme climatic conditions and must meet tough operating requirements. Our crane motors stand up to high humidity levels, salt-laden air, and high wind speeds. They are characterized by high overload capability and a large speed setting range, for example, to operate hoist mechanisms efficiently in converter operation. Innomotics DP crane motors are reliably protected against corrosion with especially elaborate paint finishes and sealing. The rugged cast-iron motors are especially suitable for tough operation under hostile conditions, for indoor and outdoor use, e.g. in harbor facilities for rubber-tired gantry, rail-mounted gantry, and automatic stacking cranes. Special pulse encoders and brakes round off the product to form a perfectly adapted solution.

You can obtain further information on the Innomotics DP crane motors from your Innomotics contact and found in the catalog CR_81.

Innomotics DP application-specific motors - Marine motors

Overview

Low-voltage motors in the marine version can be used below deck on ships and in the offshore industry. The thermal utilization of the motors is adapted to the generally higher ambient temperatures onboard ships. If the application demands compliance with additional regulations, such as explosion protection (Directive 2014/34/EU (ATEX 95)), the appropriate motor series must be chosen.

The motors on board ships are generally subdivided into three classes of importance by the marine classification societies in cooperation with customers, depending on the field of application:

- _ **Essential Service for Propulsion** or also referred to as Primary Essential Service
- _ **Essential Service** or also referred to as Secondary Essential Service or Important Service
- _ **Non-Essential Service** or also referred to as Non-Important Service

The class of importance must be specified by the customer (ordering party). Retrospective certification by means of individual acceptance test or construction supervision cannot be issued.

The categories include the following requirements of the classification societies:

	Class of importance Essential Service for Propulsion	Essential Service	Non-Essential Service
Typical applications	Propeller drive, thruster	Thrusters, lateral thrust units, anchor winches, bilge and ballast pumps, fire-fighting pumps	Pumps for service water
Version	In accordance with the regulations set up by the classification society		In accordance with ambient conditions set up by the classification society
Inspection certificate	Inspection certificate 3.2 in accordance with EN 10204	Inspection certificate 3.1 in accordance with EN 10204	None
Individual acceptance by classification society	Necessary if no type test certificate exists or the classification society has defined it based on the application		Not required
Type test	Not a requirement of the classification societies For standard motors up to frame size 355, a type test certificate is supplied. These motors can only be ordered with options E11 to E54 in accordance with the classification society.		
Ordering several identical motors	Differentiation between the first motor and additional ones must be realized when ordering using an order code		No distinction
Rating plate data	Information about ambient conditions of the classification society		
Stamp of the classification society	Stamp on shaft and housing		No stamp

Classification societies

Society	Abbreviation	Location
American Bureau of Shipping	ABS	USA
Bureau Veritas	BV	France
DNV Maritime	DNV	Germany
Korean Register	KR	Korea
Lloyds Register	LR	UK
Registro Italiano Navale	RINA	Italy

Innomotics DP application-specific motors - Marine motors

Overview

Type test (type approval)

All 1LE1, 1LE5, 1MB1, 1PC1, 1PC3, 1PC4 motors are manufactured and type tested in accordance with the regulations set up by the following international classification societies:

- _ ABS (American Bureau of Shipping)

- _ BV (Bureau Veritas, France)

- _ DNV Maritime

- _ KR (Korean Register of Shipping)

- _ LR (Lloyds Register of Shipping)

- _ Registro Italiano Navale (RINA)

Special versions that differ from the range defined in the catalog are possible on request.

Benefits

The marine motors offer the user a number of advantages and benefits:

- _ Cast-iron versions can be supplied for corrosive atmospheres especially for high humidity levels and salty air
- _ Increased corrosion protection using specially designed paint finishes is available
- _ Certified marine motors can be supplied for use in areas to be protected against explosion (hazardous zones)
- _ Due to the existing type test, individual acceptance test in power ranges below the power limits defined by the classification societies is not required which means short delivery times
- _ In depth know-how regarding customer requirements
- _ Worldwide service network with 24 hour service hotline for motors and converters

Innomotics DP application-specific motors - Marine motors

Application

Our type tested marine motors are specially designed for use on board ship below deck and for the offshore industry:

- _ Applications on ships as main and auxiliary drives below deck, e.g.:
 - _ Fans (air conditioning systems, refrigeration systems)
 - _ Pumps (for fire-extinguishing water, fuels, oils)

- _ Winches (anchor winches, warping winches, lifting gear)
- _ Compressors
- _ Bow thruster drives
- _ Ex motors for hazardous zones
- _ Application in the offshore industry
 - _ Coastal areas, e.g. oil rigs, drilling ships

Typical below-deck applications

Technical specifications

Housing design

Motors can be supplied depending on the motor series in a corrosion-resistant aluminum housing or in a rugged low-vibration cast-iron version.

Motor connection

Cable glands are not included in the standard scope of supply with the exception of explosion-protected motors (see "Special versions").

All marine motors generally have an external grounding terminal.

Mountings (rotary pulse encoder, separately driven fan, brake)

Brakes, encoders and separately driven fans from our basic series (1LE, 1MB) are accepted as mountings without a separate certificate from the marine classification societies by the following: LR, RINA, DNV, ABS and KR.

However, BV always demands separate certification for encoders. For this reason, 1LE1, 1MB1, 1PC1 and 1PC3 motors for BV can only be supplied in the "prepared for encoder mounting" condition. In this instance, the customer must bear responsibility for purchasing and installing a suitable encoder. With respect to brakes and separately driven fans, BV will also accept Innomotics standard components.

Fan / fan cover

Fans and fan covers are made from the same materials as components from the basic series. BV stipulates that these components must be made of metal, and they are automatically supplied in this material when order code **E31** is specified.

Type test certificates

The image displays several overlapping type approval certificates for Siemens AG asynchronous low-voltage motors. Key certificates include:

- ABS Certificate of Design Assessment:** Certifies a representative of the Bureau de Classification des Bateaux (BCB) for Siemens AG - D-97616 Bad Neustadt. It covers asynchronous design plans and data for the below listed product.
- Lloyd's Register Type Approval Certificate:** Issued to Siemens AG, Industry Sector, dated 30 July 2019. It certifies that the product below is found to be in compliance with the relevant requirements of the Lloyd's Register Type Approval System.
- Siemens AG Type Approval Certificate (Internal):** For asynchronous machines (Power below 100 kW), issued to the Marine & Offshore Division. It includes technical details like rated power (95 kW), rated frequency (50 Hz), and various options.
- Polish Register of Shipping (RPMR) Type Approval Certificate:** No. 11805/0180, issued on 19th August 2014. It certifies the product in accordance with the requirements of the RPMR Type Approval System.
- Czech Republic Register of Shipping (RPS) Type Approval Certificate:** No. 11805/0180, issued on 19th August 2014. It certifies the product in accordance with the requirements of the RPS Type Approval System.

Innomotics DP application-specific motors - Marine motors

Technical specifications

Temperature class and coolant temperature

Innomotics GP/SD standard motors and Innomotics XP explosion-proof motors up to frame size 355

In general, marine motors are designed for a coolant temperature CT 45 °C in temperature class 155 (F) – used according to 155 (F) – with thermal reserve. When motors are used according to temperature class 130 (B) (order code **N05**), derating is required. For standard motors up to frame size 315 L, the derating is approx. 4 % (for order codes **E52** and **E21** approx. 8 %).

1MB1 motors in Zones 2, 21 and 22 are designed for temperature class 155 (F) – used according to temperature class 130 (B) – with derating of approx. 4 % (with order code **E52** approx. 8 %). Motors with increased power in temperature class 155 (F) – used according to temperature class 155 (F) – are also derated by approx. 4 % (with order code **E52** and **E21** approx. 8 %). If temperature class 155 (F) is to be used according to 130 (B), further derating of approximately 10 % is required.

Coolant temperatures that exceed CT 45 °C require derating in accordance with the following table:

	Coolant temperature CT			
	45 °C	50 °C	55 °C	60 °C
Temperature class 155 (F) used according to 155 (F)				
Derating factor for line operation	1.00	0.96	0.92	0.87
Temperature class 155 (F) used according to 130 (B)				
Derating factor for line operation	0.90	0.86	0.83	0.78

More detailed information is available on request.

Rating plate and inspection certificate

The rating plate indicates the relevant classification society and the associated coolant temperature

V		Hz	A	kW	cos φ	NOM.EFF	1/min	IE-CL
400 Δ	50	192	110	0.86	96.3	1491	IE4	
690 Y	50	111	110	0.86	96.3	1491	IE4	
460 Δ	60	193	127	0.86	96.2	1790	IE4	
460 Δ	60	169	110	0.85	96.2	1792	IE4	

Rating plate for a marine motor according to DNV

Degree of protection

The protection classes applicable here are specified in the catalog sections for basic series 1LE1/1LE5/1MB1/1MB5/1PC1. With IP56, icing must be avoided.

Winding and motor protection

For monitoring the winding and bearings, the motors can be equipped with PTC thermistors, temperature sensors and resistance thermometers. Anti-condensation heaters can also be fitted to the marine motors to prevent condensation building up on the winding.

Paint finish

The standard paint finish is suitable for indoor installations or outdoor installations which are roof-protected against weathering.

When installing the standard motors in sea air or in rooms with permanent moisture, the special paint finish climate group "worldwide" according to IEC 60721-2-1 is appropriate, because this ensures a higher degree of corrosion protection. Most marine motors are finished in this special paint finish as standard (see "Special versions").

With particularly corrosive atmospheres, the sea-air-resistant special paint finish C4 (order code **S03**) or the offshore special paint finish C5 (order code **S04**) is recommended.

Special paint colors with the order codes **Y53** and **Y56** and increased film thicknesses are available on request.

Converter operation

The standard insulation of the motors is designed such that converter operation is permissible at line voltages up to $U_{rated} \leq 500$ V. The following limit values (voltage values are peak values) must be maintained: $\hat{U}_{phase-to-phase} \leq 1500$ V, $\hat{U}_{phase-to-ground} \leq 1100$ V, voltage rise times of $t_s > 0.1$ μs. Operation of motors at higher voltage peaks (e.g. on converters with controlled input, e.g. AFE, ALM) requires motors with higher insulation resistance. Please inquire in this case.

During installation, the EMC guidelines must be complied with. This does not apply to motors in type of protection Ex eb according to IEC/EN 60079-2 that are certified only for line operation.

It is important to note the extent to which the converter used must also be acceptance tested by the marine classification authority.

Innomotics DP application-specific motors - Marine motors

Technical specifications

Recommended special versions

- _ Motor protection with with 1 or 3 PTC thermistors – for tripping (2 terminals) – 15th position of the Article No. **B**
- _ Installation of Pt100 resistance thermometers for winding temperature monitoring – 16th position of the Article No. **"H"**
- _ Especially for the motor series 1LE5:
Installation of 2 Pt100 resistance thermometers in basic circuit for rolling-contact bearings – order code **Q72**
- _ Anti-condensation heating for 230 V – order code **Q02**
- _ Anti-condensation heating for 115 V – order code **Q03**
- _ IP56 degree of protection for protection against harmful dust deposits, protection against water jets from any direction – order code **H22**
- _ IP65 degree of protection for complete protection against dust deposits, protection against water jets from any direction – order code **H20**
- _ Special bearing for drive-end (DE) and non-drive-end (NDE), bearing size 63 – order code **L25**, for non-standard motors on request
- _ Metal external fan for self-ventilated motors – order codes **F74** and **F76** (standard with order code **E31**)

Additional notes

Order information

The fees levied by the classification societies for individual acceptance testing are included in order code **B10** for motor types 1LE1, 1LE5, 1PC5, 1MB1, 1PC1 and 1PC3.

When ordering, add the supplement **-Z** to the Article No. and state details in plain text if required.

For information about other special versions, refer to the appropriate sections under "Innomotics GP/SD 1LE1/1PC1 standard motors" and "Innomotics XP 1MB1 explosion-protected motors".

In addition to this, for marine motors, the following special versions are the "Standard version" and therefore included in the order codes for the basic marine version.

Standard version:

Designation	Order code
Inspection certificate 3.1 in accordance with EN 10204 Note: The delivery time for the manufacturer's test certificate may differ from the delivery time for the motor.	B02
External grounding terminal	H04

Ordering example

Selection criteria	Requirement	Structure of the Article No.
Motor type	Innomotics SD Basic Line, efficiency class IE3 Premium Efficiency, IP55 degree of protection, IM B3 type of construction, without winding protection, terminal box at top	1LE1503
No. of poles, speed, rated power	4-pole, 1500 rpm, 55 kW	1LE1503-2CB2
Voltage, frequency	400 VΔ/690 VY, 50 Hz	1LE1503-2CB23-4
Type of construction	IM B3	1LE1503-2CB23-4A
Motor protection	1 or 3 PTC thermistors – for tripping (2 terminals)	1LE1503-2CB23-4AB

Overview

Keep your business running and shaping your digital future – with Customer Services for Innomotics

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier. We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt.

8

We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer life-span.

You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

innomotics.com/services

Overview

Benefit from our wide range of **Support and Consulting Services**: Our Innomotics portal offers you comprehensive information, application examples, FAQs and support request options at portal.innomotics.com. This also comprises Technical Support and Diagnostics, including advice and answers to inquiries about functionality, application and fault clearance.

Spare Parts Services means optimum system availability in two ways: fast delivery of original spare parts for up to ten years, with optimized logistics processes - and preventive spare parts provisioning at the customer's premises through coordinated spare parts packages for individual products, custom-assembled drive components and entire integrated drive trains.

As part of **Field and Maintenance Services**, our global network of specialists offers you high-quality maintenance services and optimized commissioning times. Maximize the availability of your systems by offering regular inspections and "health checks" and optimize your production processes.

Use **Retrofit and Upgrade Services** to extend the service life of your machines and plants. Optimize the availability, reliability and energy efficiency of your installed motors and drives by retrofitting existing products and systems. Your benefit: Optimized performance, higher productivity and stable production processes with highly available drives.

Training Services are geared entirely towards offering our know-how as a manufacturer didactically concentrated to the industry and expanding the competence of your employees in handling the entire spectrum of Innomotics products. This ranges from basic skills training courses to specialized training for advanced technical skills.

Two service packages from our digital Inspire IQ range provide you with optimum support for your work. The first package **Rapid Response**, is all about getting your devices up and running again as quickly as possible. The second, **Guided Supervision**, is a service package specifically for the challenges of continuous monitoring.

We offer **Repair Services** with specialized service technicians on site and in regional repair centers to quickly restore the functionality of faulty devices. Extended repair services are also available, including additional diagnostic and repair measures as well as emergency services.

The **Service Agreements** give you the opportunity to bundle a variety of services in a single annual or multi-year contract. You can select these individually to match your requirements or fill gaps in your organization's maintenance capacities. Programs and agreements can be contracted on a KPI-based and/or performance-based basis.

Appendix

Innomotics Evaluate energy efficiency tool

Overview

The Innomotics Evaluate energy efficiency tool supports you in determining your energy saving potential and payback times based on your individual conditions of use. This practical tool helps to make informed decisions regarding investments in our energy-efficient technologies.

With Innomotics Evaluate, you can compare drive systems and relevant drive component parameters in a graphical interface. Our tool offers numerous comparison possibilities for different control types and comprehensive product combinations for drive solutions for pump and fan applications. Our product portfolio includes Innomotics motors and Siemens SINAMICS converters as well as Siemens SIRIUS switchgears, providing you with a comprehensive range of comparison possibilities tailored to your individual requirements.

Innomotics Evaluate offers numerous comparison scenarios:

- _ Comparison of drive systems for pump and fan applications in the power range from 0.55 kW to 1,000 kW for
 - _ Throttle control (fixed speed; motor and switchgear)
 - _ Bypass control (fixed speed; motor and switchgear)
 - _ Speed control (variable speed; motor and converter)
- _ Comparison and evaluation of standard motors (incl. Ignition protection motors) in different energy efficiency classes

Innomotics Evaluate supports the evaluation of different product and system comparisons by:

- _ Displaying the potential savings for energy and energy costs as well as CO₂ emissions
- _ Estimation of the amortization time
- _ Estimation of the individual total lifecycle costs
- _ Representation of the system power losses according to IEC 61800-9-2 for full load and partial load

Access to the Innomotics Evaluate energy efficiency tool

Innomotics Evaluate can be accessed without the need for registration or logging in:
evaluate.innomotics.com/en

Index of order codes

Order codes for motors 1FP, 1LE, 1MB, 1PC

All options are listed alphanumerically according to order codes in the following table.

Order code	Special versions	Category	For further information, see page
B01	A printed version of the safety notes in German/English and safety notes in the language of the country of use is supplied in each wire-lattice pallet	Packaging, safety notes, documentation and test certificates	2/131, 4/68, 4/127
B02	Inspection certificate 3.1 in accordance with EN 10204		2/130, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/118, 5/124
B07	Additional rating plate for voltage tolerance	Rating plate and additional rating plates	2/131, 2/138, 3/56, 3/63,
B10	Individual acceptance by marine classification society	Marine version – Acceptance/certification	6/9, 6/10, 6/11, 6/12
B13	Without "Made in manufacturing country" marking	Packaging, safety notes, documentation and test certificates	3/57, 3/64,
B18	Removal of P60 60Hz data from rating plate	Rating plate and additional rating plates	3/56, 3/63,
B30	Version additionally for dust Ex tc – Zone 22	Explosion-protected version	5/102, 5/106, 5/115, 5/120
B31	Version IIC with stamping of IIB		5/102, 5/106, 5/111, 5/115, 5/120
B32	Version additionally for dust Ex tb - Zone 21; IP65		5/111, 5/115
B33	T1/T2 on rating plate		5/111
B40	Version for converter operation in basic version with operating data SINAMICS G120 with PM240-2		5/102, 5/106, 5/120
B41	Version for converter operation in basic version with operating data SINAMICS S150		5/102, 5/106, 5/120
B43	Version for converter operation with power data on the PWM converter		5/102, 5/106, 5/115, 5/120
B44	Version for converter operation with power data on the PWM converter when used in accordance with temperature class 155 (F)		5/115 5/120
B50	Starting curves (torque-speed and current-speed)	Packaging, safety notes, documentation and test certificates	3/57, 3/64, 5/124
B51	Equivalent circuit diagram		3/57, 3/64, 5/124
B52	Starting diagram (torque vs. speed and current vs. speed)		2/131, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/118, 5/124
B54	Document - Paint thickness report		2/131, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/118, 5/124
B60	Document - Electrical datasheet		2/131, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/118, 5/124
B61	Document - Order dimensional drawing		2/139, 2/144, 3/57, 3/64, 4/72, 4/132, 5/110, 5/114, 5/119, 5/124
B65	Standard test (routine test) with acceptance		3/57, 3/64, 5/124
B67	Temperature test without acceptance		3/57, 3/64, 5/124
B68	Temperature test with acceptance		5/119
B71	Noise measurement without load with octave band analysis, without acceptance	Explosion-protected version	5/119
B72	Noise measurement without load with octave band analysis, with acceptance		2/139, 2/144, 3/64, 4/72, 4/132, 5/110, 5/114, 5/119, 5/124
B77	Remote acceptance	Packaging, safety notes, documentation and test certificates	2/139, 2/144, 3/64, 4/72, 4/132, 5/110, 5/114, 5/119, 5/124
B78	Hybrid acceptance		2/139, 2/144, 3/64, 5/110, 5/114, 5/119, 5/124
B82	Type test with heat run for horizontal motors, with acceptance		2/144, 3/57, 6/11
B82	Type test with heat run for horizontal motors, with acceptance	Marine version – Basic version	2/131, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/119, 5/124
B83	Type test with heat run for horizontal motors, with acceptance	Packaging, safety notes, documentation and test certificates	6/9, 6/10, 6/11, 6/12
B83	Type test with heat run for horizontal motors, with acceptance	Marine version – Basic version	5/105, 5/110, 5/114, 5/119, 5/124
B86	Material certificate 3.1 for motor shaft	Packaging, safety notes, documentation and test certificates	5/105, 5/110, 5/114, 5/119, 5/124
B87	Material certificate 2.2 for winding copper		5/105, 5/110, 5/114, 5/119, 5/124
B88	Material certificate 2.2 for stator lamination		2/131, 2/139, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/119, 5/124
B90	"Basic" documentation package		2/131, 2/139, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/119, 5/124
B91	"Advanced" documentation package		2/131, 2/139, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/119, 5/124
B92	"Projects" documentation package		2/131, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/119, 5/124
B93	Photo documentation of the motor "Basic"		3/131, 3/139, 3/144, 4/57, 4/64, 5/68, 5/73, 5/129, 5/134, 6/105, 6/110, 6/114, 6/119, 6/124

Index of order codes

Order code	Special versions	Category	For further information, see page
B94	Photo documentation of the motor "Advanced"	Packaging, safety notes, documentation and test certificates	2/131, 2/139, 2/144, 3/57, 3/64, 4/68, 4/72, 4/127, 4/132, 5/105, 5/110, 5/114, 5/119, 5/124
B99	Wire-lattice pallet packaging		2/131, 4/68, 4/127, 5/105, 5/110, 5/119
C02	VIK version	Versions in accordance with standards and specifications	2/129, 2/136, 3/62, 5/102, 5/106, 5/111, 5/115, 5/120
C03	Chemstar chemical Industry		2/136, 3/62, 5/106, 5/111, 5/115
C04	Chemstar Oil & Gas Industry		2/136, 3/62, 5/106, 5/111, 5/115
C06	Performance Line Process industry		22706
D01	CCC China Compulsory Certification		2/129, 2/136
D02	Coolant temperature -50 to +40 °C	Coolant temperature and installation altitude	2/136, 2/143, 3/61, 4/71, 4/130
D03	Coolant temperature -40 to +40 °C		2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/126, 4/130, 5/104, 5/108, 5/112, 5/117, 5/122
D04	Coolant temperature -30 to +40 °C		2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/126, 4/130
D05	Coolant temperature -55 to +40 °C	Explosion-protected version	5/117
D22	Motor without CE marking for export outside EEA (see EU Regulation 2019/1781)	Versions in accordance with standards and specifications	2/129, 2/136, 3/62, 5/104, 5/108, 5/117
D23	Motor exclusively for use in transportation equipment for passenger and freight transportation corresponding to EVPG §1 dated February 27, 2008		2/129, 2/136, 3/62, 5/104, 5/108
D30	Electrical according to NEMA MG1-12		2/129, 2/136, 3/62,
D31	Design according to UL with "Recognition Mark"		2/129, 2/136, 3/62,
D32	Ex certification for China	Explosion-protected version	5/104, 5/108, 5/117
D33	KEA Korea Energy Efficiency Label	Versions in accordance with standards and specifications	2/129, 2/136
D34	China Energy Efficiency Label		2/129, 2/136, 3/62, 5/104, 5/108, 5/117
D35	Ex certificate EAC for the Eurasian Customs Union	Explosion-protected version	5/104, 5/108, 5/117
D37	IECEX certification		5/104, 5/108, 5/113, 5/117, 5/123
D39	Version according to UL and CSA (Canadian regulation)	Versions in accordance with standards and specifications	4/67, 4/71, 4/126, 4/130
D40	Canadian regulations (CSA)		2/129, 2/137, 3/62
D41	NEMA Premium Efficient, North America version acc. to NEMA MG1, Table 12-12, incl. UL and CSA		2/129, 2/137, 3/62
D43	North American version acc. to NEC500: Cl. I, Div. 2 and NEC505: Zone 2		5/108,
D44	North American version acc. to NEC500: Cl. I/II, Div.2 and NEC505/NEC506: Zone 2/22		5/108,
D47	TR CU product safety certificate EAC for Eurasian Customs Union		2/129, 2/137, 3/55, 3/62, 4/67, 4/71, 4/126, 4/130
D70	MEPS Australia		2/129, 2/137, 3/55, 3/62, 5/104, 5/108, 5/117, 5/123
D72	BIS India (Indian standard IS 12615:2018)		2/129, 2/137, 3/55, 3/62,
D73	SASO EER		2/129, 2/137, 3/55, 3/62,
D76	UKCA-Ex-certification	Explosion-protected version	2/129, 5/104, 5/108, 5/113, 5/117, 5/123
D77	MEPS Taiwan	Versions in accordance with standards and specifications	22706
D78	Ex certification UAE (ECAS Ex)	Explosion-protected version	5/117
E21	With type test certificate according to Lloyds Register (LR), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)	Marine version - Basic version	6/9, 6/10, 6/11, 6/12
E31	With type test certificate according to Bureau Veritas (BV), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/9, 6/10, 6/11, 6/12
E41	With type test certificate according to Registro Italiano Navale (RINA), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/9, 6/10, 6/11, 6/12
E51	With type test certificate according to DNV Maritime, CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/9, 6/10, 6/11, 6/12
E52	With type test certificate according to American Bureau of Shipping (ABS), CT 50 °C, temperature class 155 (F), utilized according to 155 (F)		6/9, 6/10, 6/11, 6/12
E54	With type test certificate according to Korean Register of Shipping (KR), CT 45 °C, temperature class 155 (F), utilized according to 155 (F)		6/9, 6/10, 6/11, 6/12
F01	Mounting of holding brake (standard assignment)	Modular technology - Basic versions	2/128, 2/134, 2/142, 3/54, 3/60, 4/66, 4/70, 4/125, 4/129,
F04	Mounting of PRECIMA brake		2/128, 2/134, 2/142, 3/54, 3/60, 4/66
F10	Brake supply voltage 24 V DC	Modular technology - Additional versions	2/128, 2/134, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129, 5/117
F11	Brake supply voltage 230 V AC, 50/60 Hz		2/128, 2/134, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129, 5/117
F12	Brake supply voltage 400 V AC, 50/60 Hz		2/128, 2/134, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129, 5/117
F17	Brake supply voltage 180 V DC		2/128, 2/135, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129
F18	Brake supply voltage 205 V DC		2/128, 2/135, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129
F20	Mounting of brake in Ex db version	Explosion-protected version	5/117

Appendix

Index of order codes

Order code	Special versions	Category	For further information, see page	
F40	Backstop, counterclockwise motion blocked, clockwise direction of rotation	Modular technology – Additional versions	2/135, 2/142, 3/55, 3/60, 4/70	
F41	Backstop, clockwise motion blocked, counterclockwise direction of rotation		2/135, 2/142, 3/55, 3/60, 4/70	
F50	Mechanical manual brake release with lever (no locking)		2/128, 2/135, 2/142, 3/54, 3/60, 4/66, 4/70, 4/127, 4/129, 5/117	
F68	Metal fan made of brass	Explosion-protected version	5/118, 5/123	
F70	Mounted separately driven fan	Modular technology – Basic versions	2/128, 2/134, 2/142, 3/54, 3/60, 4/67, 4/72, 4/126, 4/131, 5/103, 5/108, 5/117, 5/122	
F74	Sheet metal fan cover		Heating and ventilation	2/130, 2/138, 2/144, 3/56, 3/63, 4/67, 4/72, 4/126, 4/131
F75	Fan cover for textile industry		2/130, 3/56, 4/67, 4/126	
F76	Metal external fan		2/130, 2/138, 2/144, 3/56, 3/63, 4/67, 4/72, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118	
F77	Low-noise version for 2-pole motors with clockwise direction of rotation	Mechanical design and degrees of protection	2/128, 2/136, 2/143, 3/61, 5/103, 5/108, 5/111, 5/117, 5/122	
F78	Low-noise version for 2-pole motors with counterclockwise direction of rotation		2/128, 2/136, 2/143, 3/61, 5/103, 5/108, 5/111, 5/117, 5/122	
F90	Without external fan and without fan cover	Heating and ventilation	2/130, 2/138, 2/144, 3/56, 3/63, 4/67, 4/126 5/123	
G03	Mounting of rotary pulse encoder HOG 86E	Special technology	2/128, 2/135, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129	
G04	Mounting of LL 861 900 220 rotary pulse encoder		2/128, 2/135, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129	
G05	Mounting of HOG 9 DN 1024 I rotary pulse encoder		2/128, 2/135, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129	
G06	Mounting of HOG 10 D 1024 I rotary pulse encoder		2/128, 2/135, 2/142, 3/55, 3/60, 4/66, 4/70, 4/125, 4/129	
G07	Mounting of POG 10 DN rotary pulse encoder (only in combination with separately driven fan or brake)		2/135, 2/142, 3/60, 4/70, 4/129	
G08	Mounting of POG 9 rotary pulse encoder (only in combination with separately driven fan or brake)		2/135, 2/142, 3/61, 4/70, 4/129	
G11	Mounting of Kübler Sendix 5020 HTL, 1024 I rotary pulse encoder		Modular technology – Basic versions	2/128, 2/134, 2/142, 3/54, 3/60, 4/66, 4/70, 4/125, 4/129
G12	Mounting of Kübler Sendix 5020 TTL, 1024 I rotary pulse encoder			2/128, 2/134, 2/142, 3/54, 3/60, 4/66, 4/70, 4/125, 4/129
G15	Mounting of HOG 10 DN 1024 I rotary pulse encoder, terminal box moisture protection	Special technology	2/135, 2/142, 3/61,	
G16	Mounting of HOG 10 DN 1024 I rotary pulse encoder, terminal box dust protection		2/135, 2/142, 3/61,	
G21	Mounting of Kübler Sendix 5834FS2 1024, SIL-2 rotary pulse encoder		2/128, 2/135, 2/142, 3/61, 4/66, 4/71, 4/130	
G22	Mounting of Kübler Sendix 5834FS3 1024, SIL-3 rotary pulse encoder		2/128, 2/135, 2/142, 3/61, 4/66, 4/71, 4/125, 4/130	
G25	Mounting of HOGS100S-B76.626.01024.1 rotary pulse encoder		2/128, 2/135, 2/142, 3/61, 4/66, 4/71, 4/130	
G27	Mounting of LL FSI 862-184560-1024, SIL-2 rotary pulse encoder		2/128, 2/135, 2/142, 3/61, 4/66, 4/71, 4/130	
G30	Mounting of LL 841 (HTL); 1024 I explosion-protected rotary pulse encoder	Explosion-protected version	5/103, 5/108, 5/117, 5/122	
G40	Prepared for mounted components, centering hole only	Mechanical design and degrees of protection	2/128, 2/136, 2/143, 3/55, 3/61, 4/66, 4/71, 4/125, 4/130	
G41	Prepared for mountings with D12 shaft		2/128, 2/136, 2/143, 3/55, 3/61, 4/66, 4/71, 4/125, 4/130	
G42	Prepared for mountings with D16 shaft		2/129, 2/136, 2/143, 3/55, 3/61, 4/66, 4/71, 4/125, 4/130	
G43	Mechanical protection for encoder		2/129, 2/136, 2/143, 3/55, 3/61, 4/66, 4/71, 4/125, 4/130, 5/99, 5/104, 5/122	
G93	Mounting of rotary pulse encoder XSI 850 Overspeed	Special technology	2/128, 2/135, 2/142, 3/61,	
G94	Mounting of rotary pulse encoder XHI 861 Overspeed		2/128, 2/135, 2/142, 3/61,	
H00	Protective cover	Mechanical design and degrees of protection	2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112, 5/117, 5/122	
H01	Screwed-on (instead of cast) feet		2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112	
H02	Vibration-proof version; vibration resistance to Class 3M4 according to IEC 60721-3-3:1994		2/129, 2/136, 2/143, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112, 5/117, 5/122	
H03	Condensation drainage holes		2/129, 2/136, 2/143, 3/55, 4/67, 4/71, 4/125, 5/103, 5/108, 5/112	
H04	External grounding	Motor connection and terminal boxes	2/126, 2/132, 2/140, 3/53, 4/65, 4/69, 4/124, 4/128	
H06	External screws, bolts and unpainted materials made of stainless steel (V4A)	Explosion-protected version	5/108, 5/112, 5/117	

Order code	Special versions	Category	For further information, see page
H07	Rust-resistant screws (externally)	Mechanical design and degrees of protection	2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112, 5/117, 5/122
H08	Terminal box on NDE	Motor connection and terminal boxes	2/126, 2/132, 2/140, 3/46, 3/58, 4/65, 4/69, 4/124, 4/128, 5/121
H09	Two terminal boxes on NDE		3/58, 5/121
H10	Housing with screw mounting	Mechanical design and degrees of protection	2/129, 4/67
H19	Degree of protection IP66		2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/108, 5/112, 5/117, 5/122
H20	IP65 degree of protection		2/129, 2/136, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112, 5/117, 5/122
H21	IP54 degree of protection		2/136, 3/61, 4/71, 4/130
H22	IP56 degree of protection		2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112, 5/117, 5/122
H23	Drive-end seal for flange-mounted motors, oil-tight to 0.1 bar		2/129, 2/136, 2/143, 3/55, 3/61, 4/67, 4/71, 4/125, 4/130, 5/103, 5/108, 5/112, 5/117, 5/122
H25	Sealing ring made of fluoroelastomer (FKM)		3/55, 3/61, 5/122
H30	Adjustment screws for feet in horizontal installation	Explosion-protected version	5/108, 5/112, 5/117, 5/122
H70	Second external grounding	Motor connection and terminal boxes	2/132, 2/140, 3/53, 3/58, 4/69, 4/128, 5/111, 5/115, 5/121
H90	Increased corrosion protection for external components	Mechanical design and degrees of protection	3/61, 5/122
L00	Vibration severity grade B	Balance and vibration severity	2/130, 2/137, 2/143, 3/56, 3/63, 5/104, 5/109, 5/113, 5/118, 5/123
L01	Balancing without feather key		2/130, 2/137, 2/143, 3/56, 3/63, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/118, 5/123
L02	Full-key balancing		2/130, 2/137, 2/143, 3/56, 3/63, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/118, 5/123
L04	Shaft extension with standard dimensions, without feather keyway	Shaft and rotor	2/130, 2/137, 2/144, 3/56, 3/63, 4/67, 4/71, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
L05	Standard, cylindrical shaft extension (second shaft extension) NDE acc. to IEC 60072-1		2/130, 2/137, 2/144, 3/56, 3/63, 4/67, 4/71, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
L06	Standard shaft made of stainless steel (e.g. 1.4021)		2/130, 2/137, 2/144, 3/56, 3/63, 4/67, 4/71, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
L07	Shaft extension run-out in accordance with IEC 60072-1 precision class		2/130, 2/137, 2/144, 3/56, 3/63, 4/67, 4/72, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
L08	Shaft extension run-out, concentricity and perpendicularity in accordance with IEC 60072-1 precision class for flange-mounted motors		2/130, 2/137, 2/144, 3/56, 3/63, 4/67, 4/72, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
L12	Next larger DE shaft end		23071
L19	Regreasing device with M10 × 1 grease nipple according to DIN 71412-A	Bearings and lubrication	2/130, 2/137, 2/143, 3/62, 4/71, 4/130, 5/109, 5/113, 5/117, 5/123
L20	Located bearing DE		2/130, 2/137, 2/143, 3/55, 3/62, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/117, 5/123
L21	Located bearing NDE		2/130, 2/137, 2/143, 3/55, 3/62, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/117, 5/123
L22	Bearing design for increased cantilever forces		2/130, 2/137, 2/143, 3/55, 3/62, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/117, 5/123
L23	Regreasing device		2/130, 2/137, 2/143, 3/55, 3/62, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/117
L24	Hot bearing grease		22706
L25	Bearings reinforced at both ends for DE and NDE, bearing size 63		2/130, 2/137, 2/143, 3/55, 3/62, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/123
L28	Reinforced bearings at both DE and NDE, DE bearing for increased cantilever forces		2/137, 2/143, 3/55, 3/62, 4/71, 4/130, 5/113
L30	Drainage for used grease		3/62, 5/123
L34	Bearing for high axial tension forces		2/130, 2/137, 2/143, 3/56, 4/67, 4/71, 4/126, 4/130, 5/109, 5/117
L35	Bearing for high axial tension and thrust forces	Explosion-protected version	5/117
L37	Motor design VSD, higher speed up to 4500 rpm, vibration level A acc. IEC60034-14, incl. routine test	Versions in accordance with standards and specifications	3/62

Appendix

Index of order codes

Order code	Special versions	Category	For further information, see page
L50	Bearing insulation DE	Bearings and lubrication	2/137, 2/143, 3/62, 4/130, 5/113, 5/123
L51	Bearing insulation NDE		2/130, 2/137, 2/143, 3/56, 3/62, 4/67, 4/71, 4/126, 4/130, 5/104, 5/109, 5/113, 5/117, 5/123
L52	Grounding brush for converter operation	Mechanical design and degrees of protection	2/136, 2/143, 3/61, 4/130
L91	Version suitable for railways IC411, EN IEC 60349, with EN 45545, with external fan and fan cover in metal	Versions in accordance with standards and specifications	2/129,
L92	Version suitable for railways IC418, EN IEC 60349, without EN 45545, without external fan and fan cover		2/129,
M01	Connected in star for dispatch	Motor connection and terminal boxes	2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/111, 5/115, 5/121
M02	Connected in delta for dispatch		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/111, 5/115, 5/121
M10	Second rating plate, loose	Rating plate and additional rating plates	2/130, 2/138, 2/144, 3/56, 3/63, 4/68, 4/72, 4/126, 4/131, 5/105, 5/109, 5/113, 5/118 5/123
M11	Rating plate, stainless steel		2/130, 2/138, 2/144, 3/56, 3/63, 4/68, 4/72, 4/126, 4/131, 5/105, 5/109, 5/113, 5/118 5/123
M30	Rating plate in Russian language		2/130, 2/138, 2/144, 3/56, 3/63, 4/68, 4/72, 4/126, 4/131, 5/105, 5/109, 5/113, 5/118 5/123
M31	Rating plate in Saudi Arabian language		2/130, 2/138, 2/144, 3/56, 3/63, 4/68, 4/72, 4/126, 4/131, 5/105, 5/109, 5/113, 5/118 5/123
M32	Rating plate in Kazakh language	2/130, 2/138, 2/144, 3/56, 3/63, 4/68, 4/72, 4/126, 4/131, 5/105, 5/109, 5/113, 5/118 5/124	
N01	Temperature class 155 (F), utilized according to 155 (F), with service factor	Windings and insulation	2/127, 2/133, 2/141, 3/54, 3/59
N03	Temperature class 155 (F), utilized acc. to 155 (F), with increased coolant temperature		2/127, 2/133, 2/141, 3/54, 3/59,
N05	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 45 °C, derating approx. 4 %		2/127, 2/133, 2/141, 3/54, 3/59, 5/103, 5/107, 5/112, 5/116, 5/121
N06	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 50 °C, derating approx. 8 %		2/127, 2/133, 2/141, 3/54, 3/59, 5/103, 5/107, 5/112, 5/116, 5/121
N07	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 55 °C, derating approx. 13 %		2/127, 2/133, 2/141, 3/54, 3/59, 5/103, 5/107, 5/112, 5/116, 5/121
N08	Temperature class 155 (F), utilized acc. to 130 (B), coolant temperature 60 °C, derating approx. 18 %		2/127, 2/133, 2/141, 3/54, 3/59, 5/103, 5/107, 5/112, 5/116, 5/121
N10	Temperature class 180 (H)		2/127, 2/133, 2/141, 3/54, 3/59
N11	Temperature class 180 (H) at rated power and max. CT 60 °C		2/127, 2/133, 2/141, 3/54, 3/59, 4/66, 4/70
N30	Increased air humidity/temperature with 30 to 60 g water per m ³ of air		2/127, 2/133, 2/141, 3/54, 3/59, 4/66, 4/70, 4/124, 4/129, 5/103, 5/107, 5/112, 5/116, 5/121
N31	Increased air humidity/temperature with 60 to 100 g water per m ³ of air		2/127, 2/133, 2/141, 3/54, 3/59, 4/66, 4/70, 4/129, 5/103, 5/107, 5/112, 5/116, 5/122
Q01	Measuring nipple for SPM shock pulse measurement for bearing inspection		Bearings and lubrication
Q02	Anti-condensation heating for 230 V (2 terminals)	Heating and ventilation	2/130, 2/138, 2/144, 3/56, 3/63, 4/67, 4/72, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
Q03	Anti-condensation heating for 115 V (2 terminals)		2/130, 2/138, 2/144, 3/56, 3/63, 4/67, 4/72, 4/126, 4/131, 5/104, 5/109, 5/113, 5/118, 5/123
Q04	Anti-condensation heating for 220 V (2 terminals)		3/62, 5/118
Q06	Anti-condensation heating for 400 V (2 terminals)	Heating and ventilation	3/63, 5/123
Q11	1 or 3 PTC thermistors – for tripping (2 terminals)	Motor protection	2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/120
Q12	2 or 6 PTC thermistors – for alarm and tripping (4 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/120
Q21	3 NTC thermistors – for tripping (6 terminals)	Explosion-protected version	5/120
Q31	3 bimetal sensors (NC contacts) for tripping (2 terminals)	Motor protection	2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128
Q32	6 bimetal sensors (NC contacts) for alarm and tripping (4 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128
Q33	3 bimetal sensors (NC contacts) for tripping (6 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128

Order code	Special versions	Category	For further information, see page
Q34	6 bimetal sensors (NC contacts) for alarm and tripping (12 terminals)	Motor protection	2/126, 2/132, 2/140, 3/58, 4/65, 4/69, 4/128
Q35	1 Pt1000 resistance thermometer (2 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/115, 5/120
Q36	2 Pt1000 resistance thermometers (4 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/115, 5/120
Q37	6 Pt1000 resistance thermometer (12 terminals)	Explosion-protected version	5/120
Q60	3 Pt100 resistance thermometers (6 terminals)	Motor protection	2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/106, 5/115, 5/120
Q61	6 Pt100 resistance thermometers (12 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/124, 5/106, 5/115, 5/120
Q62	1 Pt100 resistance thermometer (2 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102
Q63	3 Pt100 resistance thermometers (9 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/106, 5/111, 5/115, 5/120
Q64	6 Pt100 resistance thermometers (18 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/106, 5/111, 5/115, 5/120
Q72	2 Pt100 resistance thermometers in basic configuration for bearings (4 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/106, 5/111, 5/115, 5/120
Q78	2 Pt100 resistance thermometers for bearings (6 terminals)		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/106, 5/111, 5/115, 5/120
Q79	2 Pt100 double resistance thermometers for bearings (12 terminals)		2/126, 2/132, 2/140, 3/58, 4/65, 4/69, 4/124, 4/128, 5/106, 5/111, 5/115, 5/120
Q80	Extension of the liability for defects period by 12 months to a total of 24 months (2 years) from delivery	Extension of the liability for defects	2/138, 3/64, 4/131, 5/114, 5/118, 5/124
Q81	Extension of the liability for defects period by 18 months to a total of 30 months (2.5 years) from delivery		3/64, 5/124
Q82	Extension of the liability for defects period by 24 months to a total of 36 months (3 years) from delivery		2/138, 3/64, 4/131, 5/114, 5/118, 5/124
Q83	Extension of the liability for defects period by 30 months to a total of 42 months (3.5 years) from delivery		3/64, 5/124
Q84	Extension of the liability for defects period by 36 months to a total of 48 months (4 years) from delivery		3/64, 5/114, 5/124
Q85	Extension of the liability for defects period by 48 months to a total of 60 months (5 years) from delivery		3/64, 5/124
R09	Subsequently rotatable main terminal box	Motor connection and terminal boxes	3/58, 5/121
R10	Rotation of the terminal box through 90°, entry from DE		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/111, 5/115, 5/121
R11	Rotation of the terminal box through 90°, entry from NDE		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/111, 5/115, 5/121
R12	Rotation of the terminal box through 180°		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/106, 5/111, 5/115, 5/121
R13	Terminal box in position 0°; connection from right		2/126, 3/58, 4/65, 4/124,
R14	One EMC cable gland		2/132, 2/140, 3/53, 3/58, 4/69, 4/128, 5/102, 5/107, 5/111, 5/115, 5/121
R15	One metal cable gland		2/126, 2/132, 2/140, 3/53, 3/58, 4/65, 4/69, 4/124, 4/128, 5/102, 5/107, 5/111, 5/115, 5/121
R16	EMC cable gland, maximum configuration		2/132, 2/140, 3/53, 3/58, 4/69, 4/128, 5/102, 5/107, 5/111, 5/115, 5/121
R17	Stud terminal for cable connection, accessories pack (3 items)		2/132, 2/140, 3/58, 4/128, 5/107, 5/121
R18	Metal cable gland, maximum configuration		2/126, 2/133, 2/140, 3/53, 3/59, 4/65, 4/124, 5/102, 5/107, 5/111, 5/115, 5/121
R19	Saddle terminal for connection without cable lug, accessories pack		2/133, 2/140, 3/59, 4/128, 5/107, 5/111, 5/121
R20	3 cables protruding, 0.5 m long		2/126, 2/133, 2/140, 3/53, 3/59, 4/65, 4/124
R21	3 cables protruding, 1.5 m long		2/126, 2/133, 2/140, 3/53, 3/59, 4/65
R22	6 cables protruding, 0.5 m long		2/126, 2/133, 2/140, 3/53, 4/65, 4/124

Appendix

Index of order codes

Order code	Special versions	Category	For further information, see page
R23	6 cables protruding, 1.5 m long	Motor connection and terminal boxes	2/126, 2/133, 2/140,3/53,3/59, 4/65
R24	6 cables protruding, 3 m long		2/126, 2/133, 2/140,3/53,3/59, 4/65
R30	Reduction piece for M cable gland in accordance with British Standard, mounted on both cable entries	Explosion-protected version	2/126, 2/133
R45	1 cable gland, Ex eb, for armored cable, line feeder cable		5/102, 5/107, 5/111, 5/116
R46	2 cable glands, Ex eb, for armored cable, line feeder cable		5/116
R48	Main terminal box in Ex db IIC		5/116
R49	Auxiliary terminal box in Ex db IIC		5/116
R50	Larger terminal box	Motor connection and terminal boxes	2/127, 2/133, 2/141,3/53, 3/59, 4/65, 4/69, 4/124, 4/128, 5/102, 5/107, 5/111, 5/116, 5/121
R51	Terminal box without cable entry opening		2/133, 2/141, 3/59, 4/69, 4/128
R52	Drilled removable entry plate		2/133, 2/141, 3/59, 4/69, 4/128, 5/107, 5/111, 5/116, 5/121
R53	Undrilled removable entry plate		2/133, 2/141, 3/59, 4/69, 4/128, 5/111
R54	Enlarged connection system for main terminal box	Explosion-protected version	5/116

Appendix

Explanation of the raw material/metal surcharges¹⁾

Surcharge calculation

To compensate for variations in the price of the raw materials silver, copper, aluminum, gold, dysprosium²⁾ and/or neodym²⁾, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharges are calculated in accordance with the following criteria:

Basic official price of the raw material

- _ Basic official price from the day prior to receipt of the order or prior to release order (daily price) for³⁾
 - _ Silver (sales price, processed)
 - _ Gold (sales price, processed)
- and for⁴⁾
 - _ Copper (lower DEL notation + 1 %)
 - _ Aluminum (aluminum in cables)

Metal factor of the products

Certain products are displayed with a metal factor. The metal factor determines the official price (for those raw materials concerned) as of which the metal surcharges are applied and the calculation method used (weight or percentage method). An exact explanation is given below.

Structure of the metal factor

The metal factor consists of several digits; the first digit indicates whether the percentage method of calculation refers to the list price or a possible discounted price (customer net price) (L = list price / N = customer net price).

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG)
3rd digit	for copper (CU)
4th digit	for aluminum (AL)
5th digit	for lead (PB)
6th digit	for gold (AU)
7th digit	for dysprosium (Dy) ²⁾
8th digit	for neodym (Nd) ²⁾

Weight method

The weight method uses the basic official price, the daily price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the daily price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. The raw material weight can be found in the respective product descriptions.

Percentage method

Use of the percentage method is indicated by the letters A-Z at the respective digit of the metal factor.

The surcharge is increased - dependent on the deviation of the daily price compared with the basic official price - using the percentage method in "steps" and consequently offers surcharges that remain constant within the framework of this "step range". A higher percentage rate is charged for each new step. The respective percentage level can be found in the table below.

Metal factor examples

L E A - - - -	<ul style="list-style-type: none"> Basis for % surcharge: List price Silver Basis 150€, Step 50 €, 0.5 % Copper Basis 150 €, Step 50 €, 0.1 % No surcharge for aluminum No surcharge for lead No surcharge for gold No surcharge for dysprosium No surcharge for neodym
N - A 6 - - - -	<ul style="list-style-type: none"> Basis for % surcharge: Customer net price No surcharge for silver Copper Basis 150 €, Step 50 €, 0.1 % Aluminum acc. to weight, basic offic. price 225 € No surcharge for lead No surcharge for gold No surcharge for dysprosium No surcharge for neodym
- - 3 - - - -	<ul style="list-style-type: none"> No basis necessary No surcharge for silver Copper acc. to weight, basic official price 150 € No surcharge for aluminum No surcharge for lead No surcharge for gold No surcharge for dysprosium No surcharge for neodym

¹⁾ Refer to the separate explanation on the next page regarding the raw materials dysprosium and neodym (= rare earths).

²⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the next page.

Explanation of the raw material/metal surcharges for dysprosium and neodym (rare earths)

Surcharge calculation

To compensate for variations in the price of the raw materials silver¹⁾, copper¹⁾, aluminum¹⁾, lead¹⁾, gold¹⁾, dysprosium and/or neodym, surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. The surcharge for dysprosium and neodym is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The surcharge is calculated in accordance with the following criteria:

- _ Basic official price of the raw material²⁾
 - Three-month basic average price (see below) in the period before the quarter in which the order was received or the release order took place (= average official price) for
 - _ dysprosium (Dy metal, 99 % min. FOB China; USD/kg)
 - _ neodym (Nd metal, 99 % min. FOB China; USD/kg)
- _ Metal factor of the products
 - Certain products are displayed with a metal factor. The metal factor indicates (for those raw materials concerned) the basic official price as of which the surcharges for dysprosium and neodym are calculated using the weight method. An exact explanation of the metal factor is given below.

Three-month average price

The prices of rare earths vary according to the foreign currency, and there is no freely accessible stock exchange listing. This makes it more difficult for all parties involved to monitor changes in price. In order to avoid continuous adjustment of the surcharges, but to still ensure fair, transparent pricing, an average price is calculated over a three-month period using the average monthly foreign exchange rate from USD to EUR (source: European Central Bank). Since not all facts are immediately available at the start of each month, a one-month buffer is allowed before the new average price applies.

Examples of calculation of the average official price:

Period for calculation of the average price:	Period during which the order/release order is effected and the average price applies:
Sep 2012 - Nov 2012	Q1 in 2013 (Jan - Mar)
Dec 2012 - Feb 2013	Q2 in 2013 (Apr - Jun)
Mar 2013 - May 2013	Q3 in 2013 (Jul - Sep)
Jun 2013 - Aug 2013	Q4 in 2013 (Oct - Dec)

Structure of the metal factor

The metal factor consists of several digits; the first digit is not relevant to the calculation of dysprosium and neodym.

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG) ¹⁾
3rd digit	for copper (CU) ¹⁾
4th digit	for aluminum (AL) ¹⁾
5th digit	for lead (PB) ¹⁾
6th digit	for gold (AU) ¹⁾
7th digit	for dysprosium (Dy)
8th digit	for neodym (Nd)

Weight method

The weight method uses the basic official price, the average price and the raw material weight. In order to calculate the surcharge, the basic official price must be subtracted from the average price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. Your Sales contact can inform you of the raw material weight.

Metal factor examples

-----71	
↑	No basis necessary
↑	No surcharge for silver
↑	No surcharge for copper
↑	No surcharge for aluminum
↑	No surcharge for lead
↑	No surcharge for gold
↑	Dysprosium acc. to weight, basic official price 300 €
↑	Neodym acc. to weight, basic official price 50 €

¹⁾ For a different method of calculation, refer to the separate explanation for these raw materials on the previous page.

Security information

Innomotics provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Innomotics' products and solutions constitute one element of such a concept. Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place. For additional information on industrial security measures that may be implemented, please visit

www.innomotics.com/cybersecurity

Innomotics' products and solutions undergo continuous development to make them more secure. Innomotics strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.
